ROBERT P. PANGRAZI, AARON BEIGHLE, CARA L. SIDMAN

📖 **Pedometer Walking** Mark Fenton,David Bassett,2006-01-01 Mark Fenton, television personality and author of the best-selling Complete Guide to Walking, teams up with top exercise researcher, David R. Bassett, to help readers get moving. These guys know what works, and they’ve got pedometers on the brain. During the last ten years, pedometer use has grown exponentially. Step counting broke into the exercise vocabulary when Oprah started sporting her own pedometer, and the mania has only grown. Ten years ago there were five pedometers on the market; today there are dozens. But what to do with them? Hearing the cries for solid information, authors David R. Bassett and Mark Fenton have stepped up. Covered in this guide are a history of step counting--Jefferson was a fan, and a pedometer was designed by Leonardo da Vinci--advice on choosing a pedometer, and a guide to starting a pedometer program, with looks at successful ones in the U.S., Australia, and Europe. Most important may be the chapters treating the tremendously successful 10,000-steps-per-day programs initiated in Japan, as well as the modifications it needs to work for children and senior citizens. Aside from the pedometer itself, Pedometer Walking may be one of the most important exercise tools in years.

📖 **Pedometer Power** Robert P. Pangrazi,Aaron Beighle,Cara L. Sidman,2021-08-10 With Pedometer Power: Using Pedometers in School and Community, you can -use 65 pedometer-based activities for children and adults at home and in physical education, recreation, and after-school settings; -promote physical activity—and your program—to parents and the larger community with take-home and special-event activities; and -help participants learn about the importance of duration and intensity of physical activity and about the value of maintaining an active lifestyle. The best-selling Pedometer Power is back—updated and expanded with 65 thoroughly field-tested and exciting pedometer activities to motivate participants to become more physically active. This edition includes new and improved activities, more activities for high school and college students, an emphasis on using pedometers both in school and community settings, and updated data that clearly support the effectiveness of pedometers in monitoring physical activity. You can use Pedometer Power in a variety of settings, including physical education classes from kindergarten through college, after-school programs, recreation programs, and health-promotion programs. In doing so, you can accomplish these objectives: -Provide tips, strategies, and activities that have been refined by years of development and testing by one of the leading physical education research teams. -Ensure that students and participants will be successful and find the activities fun and motivating. -Help students and participants accurately gauge both the length and intensity of their activity. -Teach, promote, and assess physical activity, based on the cutting-edge research of the authors. -Motivate students and participants about the value of maintaining an active lifestyle. Pedometer Power provides information on how to use and store the devices, minimize breakage and loss, record and store data, promote physical activity, raise funds, and involve parents, teachers, and administrators. You’ll also find fresh, ready-to-use ideas accompanied by diagrams, photos, and time-saving record sheets for students and participants. In short, Pedometer Power contains everything you need to start and manage an ongoing pedometer program.

📖 **Manpo-Kei** Catrine Tudor-Locke,2003 The world does not need another how to exercise book. And this is exactly what this book is not about. Written in a refreshingly humorous and compassionate by the creator of the First Step Program📖 , the only scientifically proven pedometer-based physical activity intervention, Manpo-Kei📖 : The Art and Science of Step Counting presents the appealing rationale and the simplistic methods for taking back our naturally active lifestyles using a simple and inexpensive pedometer. The title of the revolutionary little book is a reflection of the Japanese 30-year experience with personal pedometers and lifestyle activity. Nicknamed manpo-kei which literally means 10,000 steps meter in Japanese, the devices were imported to America in the mid-1990’s by scientists who used them to determine daily activity levels in research studies. The power that these little instruments have to motivate individuals to increase their activity is just now being acknowledged by these same scientists... It is now time to let the public in on the secret. The author of this book holds nothing back while providing a workbook style content that gently guides the reader through the Manpo-kei📖 program of self-monitoring, goal-setting, and personal feedback processes. The author also gives away handy tools including a pedometer shopping list (what to look for), activity logs, and personal feedback worksheets.

📖 **Walk the Walk** Pete Meter,2008-10-07 Getting today’s high-tech, computer savvy kids to exercise isn’t easy—but this kit will do the trick! That’s because it includes a cool gadget and the activities seem just like games. And to kids, that spells fun. Walk the Walk is jam-packed with creative and entertaining ways to use the child-friendly pedometer that comes attached to the colorful book. See how many steps you take walking the dog—or figure out how many it would take to walk across the ocean if you could. Or give your favorite sport a cool twist by bringing the pedometer into play: first calculate the average number of paces from home plate to first base in baseball or softball. Any runner who can’t reach the base in that number of paces (or less) is out, no matter what. And there’s plenty of other great stuff to do inside, too. New pedometer-philes will learn how to make the most of this handy gadget, from online pedometer challenges to walk-racing mom and dad.

📖 **Walking, Weight and Wellness** Martin Collis,2006-09 Walking, Weight and Wellness is a practical, lifesaving book, which includes an authoritative pedometer guide and relates walking to individuals, workplaces and schools. Unique virtual walks provide a pathway to high level wellness.

📖 **Get Up and Move** Patti Graham,2012-06-13 Want to lose weight and get in shape? ** No gym membership needed. ** This step-by-step pedometer walking program will guide the reader to get in shape and achieve better health from walking. The New York Times, among other popular publications, praises this activity with numerous articles stressing the merits of walking. Getting in shape, or at least getting healthy, is a challenge for many. Who has time and who has the energy? In Get Up and Move, walking enthusiast Patti Graham offers her readers a sensible and easy plan to increase your walking activity level so you can look and feeling better. Get Up and Move will guide the reader to understand how to: * Determine current activity level and what it means * Creative, fun and safe ways to increase activity level * Setting short-term and long-term motivational goals * Tried and true ideas to help stay with it Also included are sections pertaining to health related benefits, tips for success, interval training (HIIT) and nutrition.

📖 **Reliability and Validity of Pedometers in a Free-Living Environment** Ernest Leroy Brown,1995

📖 **Pedometer Power** Robert P. Pangrazi,Aaron Beighle,Cara L. Sidman,2003 Promotes the use of pedometers by providing an introduction to the technology, explaining the benefits of the program, outlining the use of pedometers in a school setting, and suggesting exercises for children and their families.

📖 **Let’s Get Steppin! Saving the Next Generation..Pedometer Walking** Billie Jean King,2011-05 Inspired by the The Big Challenge series that aired in 2007 on kids and obesity, and the Surgeon General’s report that advocates obesity is more prevalent and pervasive among blacks and hispanics; King presented a pedometer challenge to her granddaughter in 2008, who was 8 years old at the time. Notable results were observed. 📖 Her desire for outside activities increased immensely. 📖 Attempting to reach her daily goal of 12k steps became additive. 📖 The pedometer was viewed more as a game, than a tracking tool. King shares frankly concerning her and her families battle with obesity and the associated complications of Type II diabetics, heart disease, sleep apnea, kidney failure, and hypertension to name a few. As a writer, author, she tells her irrefutable testimony of how she attributes the aid of pedometer walking and alternative food selections to her being able to ward off Type II diabetes thus far. In an eye opening and thought provoking approach; she highlights the impact of the church and its unconscious role on how it contributes toward the advancement of obesity. She also spotlights manufacturers in their supportive and not so supportive efforts. The church in a good conscious state can’t be guilty of creating an opportunity and an environment for the very thing that they preach and teach against, [temptation.] I tussled with the idea of holding off publishing this book until I’d attained my desired weight goal; I figured that it would be received or recognized as being a more effective or proven mechanism. You know... after the victory. Then I was reminded that it’s during the struggles of life is when encouragement, comfort, and strength is needed the most, whether you’re the one that’s receiving it or giving it.[Excerpt from Introduction.] Wonderfully illustrated in colorful photo’s of food, charts, graphs and alternative food recipes. Let’s Get Steppin! offers an innovative, identifiable and plain talk method to a targeted segment of America concerning the debilitating disease of obesity. It’s non-clinical, yet, in a clinical approach, it promotes self awareness along with her proven principles to assist in tackling the war on obesity. If you or your family members are toiling with the generational curse of obesity and its related complications as King confesses...this book will leave you hopeful!...

2. A Pedometer-based Intervention to Increase Physical Activity Marc Anthony Adams,2009 The majority of U.S. adults perform insufficient amounts of physical activity to prevent disease and maintain fitness. National recommendations prescribe fixed physical activity goals (e.g. 10,000 steps per day) that may fall outside of an individual's current physical activity repertoire. Prescribing smaller, more adaptive goals based on participant past behavior may be more efficacious at increasing physical activity to the target level. This study tested a pedometer-based intervention that prescribed adaptive goals and rewarded behavior using a percentile schedule of reinforcement. Five individuals enrolled into the intervention and were evaluated with a single-case withdrawal (ABA) design over 10 weeks. The six-week intervention consisted of one-time educational materials, daily adaptive goals, and contingent financial rewards administered on a percentile schedule. Daily goals were determined by ranking a participant's prior 9 days of physical activity (i.e. step counts) and selecting the 40th percentile of the distribution on a moving basis. A Lifecorder Plus, combined accelerometer and pedometer, measured moderate-to-vigorous physical activity (MVPA) minutes per day and steps per day simultaneously. Visual analyses and multilevel statistical models for longitudinal data tested for change across phases. Based on visual analysis, four of the five women increased their median number of steps/day, and all five increased their median MVPA minutes/day. Participants increased their activity by 851 steps/day (range -829 to 2,450 steps) or approximately 5,957 steps per week, and 3.34 MVPA minutes/day (range 1.93 to 17.27 minutes) or approximately 23.38 MVPA minutes per week from baseline to the intervention phase. After adjusting for wear time and day of the week, the multilevel model detected a significant increase of 551.21 steps/day (SE = 258.26, p = .03) and 2.65 MVPA minutes/day (SE = 1.09, p = .02) during the intervention phase compared to the baseline phase. This study provides a formal test of percentile schedules for physical activity research and provided intervention efficacy (i.e., 'proof of concept'). The findings may be used as a preliminary study to inform future work in this line of research.
