Teaching Mathematics Through Games Mindy Capaldi,2021-05-18 Active engagement is the key to learning. You want your students doing something that stimulates them to ask questions and creates a need to know. Teaching Mathematics Through Games presents a variety of classroom-tested exercises and activities that provoke the active learning and curiosity that you hope to promote. These games run the gamut from well-known favorites like SET and Settlers of Catan to original games involving simulating structural inequality in New York or playing Battleship with functions. The book contains activities suitable for a wide variety of college mathematics courses, including general education courses, math for elementary education, probability, calculus, linear algebra, history of math, and proof-based mathematics. Some chapter activities are short term, such as a drop-in lesson for a day, and some are longer, including semester-long projects. All have been tested, refined, and include extensive implementation notes.

Action Programming Languages Michael Hexmoor,2022-05-31 Artificial systems that think and behave intelligently are one of the most exciting and challenging goals of Artificial Intelligence. Action Programming is the art and science of devising high-level control strategies for autonomous systems which

employ a mental model of their environment and which reason about their actions as a means to achieve their goals. Applications of this programming paradigm include autonomous software agents, mobile robots with high-level reasoning capabilities, and General Game Playing. These lecture notes give an in-depth introduction to the current state-of-the-art in action programming. The main topics are knowledge representation for actions, procedural action programming, planning, agent logic programs, and reactive, behavior-based agents. The only prerequisite for understanding the material in these lecture notes is some general programming experience and basic knowledge of classical first-order logic. Combinatorics, Graph Theory and Computing Frederick Hoffman, 2022-09-13 This proceedings volume gathers selected, revised papers presented at the 51st Southeastern International Conference on Combinatorics, Graph Theory and Computing (SEICCGTC 2020), held at Florida Atlantic University in Boca Raton, USA, on March 9-13, 2020. The SEICCGTC is broadly considered to be a trendsetter for other conferences around the world – many of the ideas and themes first discussed at it have subsequently been explored at other conferences and symposia. The conference has been held annually since 1970, in Baton Rouge, Louisiana and Boca Raton, Florida. Over the years, it has grown to become the major annual conference in its fields, and plays a major role in disseminating results and in fostering collaborative work. This volume is intended for the community of pure and applied mathematicians, in academia, industry and government, working in combinatorics and graph theory, as well as related areas of computer science and

the interactions among these fields.

Computers and Games Tony Marsland, Ian Frank, 2003-06-29 This book constitutes the thoroughly refereed postproceedings of the Second International Conference on Computers and Games, CG 2001, held in Hamamatsu, Japan in October 2000. The 23 revised full papers presented together with two invited contributions and five reviews were carefully refereed and selected during two rounds of reviewing and improvement. The papers are organized in topical sections on search and strategies, learning and pattern acquisition, theory and complexity issues, and further experiments on game; the reviews presented are on computer language games, computer Go, intelligent agents for computer games, RoboCup, and computer Shogi.

More Games of No Chance Richard Nowakowski, 2002-11-25 This 2003 book documents mathematical and computational advances in Amazons, Chomp, Dot-and-Boxes, Go, Chess, Hex, and more.

Games of No Chance 3 Michael H. Albert, Richard J. Nowakowski, 2009-05-29 This fascinating look at combinatorial games, that is, games not involving chance or hidden information, offers updates on standard games such as Go and Hex, on impartial games such as Chomp and Wythoff's Nim, and on aspects of games with infinitesimal values, plus analyses of the complexity of some games and puzzles and surveys on algorithmic game theory, on playing to lose, and on coping with cycles. The volume is rounded out with an up-to-date bibliography by Fraenkel and, for readers eager to get their hands dirty, a list of unsolved problems by Guy and Nowakowski. Highlights include some of Siegel's groundbreaking work on loopy games, the unveiling by Friedman and Landsberg of the use of renormalization to give very intriguing

results about Chomp, and Nakamura's Counting Liberties in Capturing Races of Go. Like its predecessors, this book should be on the shelf of all serious games enthusiasts.

Mathematicians Playing Games Jon-Lark Kim, 2023-12-14 Features Suitable for anyone with an interest in games and mathematics. Could be especially useful to middle and high school students and their teachers. Partial solutions to the various exercises included in the book.

Discrete Perspectives in Mathematics Kevin Powell, 2022-01-14 What we see depends on how we see. This introductory text in discrete mathematics, designed for computer science and math majors alike, illustrates how simple mathematics can be if we look at it from the right discrete perspectives. Key features include SageMath explorations, detailed solutions to exercises, exciting puzzles, and much much more!

Machine Learning Tom M. Mitchell, Jaime G. Carbonell, Ryszard S. Michalski, 1986-04-30 One of the currently most active research areas within Artificial Intelligence is the field of Machine Learning, which involves the study and development of computational models of learning processes. A major goal of research in this field is to build computers capable of improving their performance with practice and of acquiring knowledge on their own. The intent of this book is to provide a snapshot of this field through a broad, representative set of easily assimilated short papers. As such, this book is intended to complement the two volumes of *Machine Learning: An Artificial Intelligence Approach* (Morgan-Kaufman Publishers), which provide a smaller number of in-depth research papers. Each of the 77 papers in the present book summarizes a current research effort, and provides references to longer expositions appearing elsewhere.

These papers cover a broad range of topics, including research on analogy, conceptual clustering, explanation-based generalization, incremental learning, inductive inference, learning apprentice systems, machine discovery, theoretical models of learning, and applications of machine learning methods. A subject index is provided to assist in locating research related to specific topics. The majority of these papers were collected from the participants at the Third International Machine Learning Workshop, held June 24-26, 1985 at Skytop Lodge, Skytop, Pennsylvania. While the list of research projects covered is not exhaustive, we believe that it provides a representative sampling of the best ongoing work in the field, and a unique perspective on where the field is and where it is headed.

Hardware and Software: Verification and Testing Eran Yahav, 2014-11-03 This book constitutes the refereed proceedings of the 10th International Haifa Verification Conference, HVC 2014, held in Haifa, Israel, in November 2014. The 17 revised full papers and 4 short papers presented were carefully reviewed and selected from 43 submissions. The papers cover a wide range of topics in the sub-fields of testing and verification applicable to software, hardware, and complex hybrid systems.
