Perfect Chemistry Simone Elkeles, 2011-11-10 From the New York Times

bestselling author Simone Elkeles comes an epic love story like no other . . . First in the gripping PERFECT CHEMISTRY series, this is the next addictive read for fans of Anna Todd's AFTER series, and Caroline Kepnes's YOU. When Brittany Ellis walks into chemistry class on the first day of senior year, she has no clue that her carefully created 'perfect' life is about to unravel before her eyes. Forced to be lab partners with Alex Fuentes, a gang member from the other side of town, Brittany finds herself having to protect everything she's worked so hard for – her flawless reputation, her relationship with her boyfriend and, most importantly, the secret that her home life is anything but perfect. Alex is a bad boy and he knows it. So when he makes a bet with his friends to lure Brittany into his life, he thinks nothing of it. But the closer Alex and Brittany get to each other the more they realise that sometimes appearances can be deceptive and that you have to look beneath the surface to discover the truth. 'Compelling and addictive... I've still got that wow feeling you get after reading a great book' Wondrousreads.com 'Perfect Chemistry is a novel to obsess about. It is a book that you should drop everything for...the most romantic love story that I have ever read.' Thebookette.com 'Captures that rush of feelings associated with first love' Thebookbag.com 'Elkeles pens plenty of tasteful, hot scenes...that keep the pages turning. The author definitely knows how to write romance.' Kirkus Review

Ideal Chemistry, a Lecture Sir Benjamin Brodie, 2012-01 Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

A Flash of Light Mark Lorch,Andy Miah,2016-07-01 A Flash of Light is an intriguing book that starts at the beginning of time itself and then winds its way through a host of fascinating light related topics including the hues of aliens sunsets, the psychology of colour, and the chemistry of LCD screens. Written as part of a novel experiment, editors Mark Lorch and Andy Miah hatched a plan to collect a critical mass of academics in a room and charged them with writing a popular science book, under the watchful eye of the general public at the Manchester Science Festival. The result is an enlightening look into the science behind colour and light, encompassing biology, chemistry and physics and including simple and fun "try this at home" ideas to illustrate the concepts covered. Drawing on the experience of some of the UK's best science communicators, this book will appeal to anyone with an interest in science. Its pacey, witty and engaging tone provides illuminating insight into how and why we see the universe the way we do.

Basic Concepts of Chemistry Leo J. Malone,2003-03-07 In photochemical reactions, such as photosynthesis, light energy initiates a chemical reaction. In the jellyfish we have just the opposite situation. That is, light energy is produced by a chemical reaction. The production of light energy by a chemical reaction is known as chemiluminescence. If it is produced by living organisms, such as the jellyfish, it is known as bioluminescence. This text emphasizes the relevance of chemistry to the world around us. Both within the text and in the essays entitled Making It Real you will find discussions of how the abstract subject of chemistry relates to the reality of our everyday lives. The Making It Real essay in Chapter 13 discusses bioluminescence that was first noticed in fireflies. Discover a fascinating, living science! From the mysteries of dark matter to the power of lightning, few subjects are more fascinating and relate more directly to everyday life than chemistry. Now redesigned and revised to promote

visualization and enhance understanding, the new Seventh Edition of Leo Malone's Basic Concepts of Chemistry captures the excitement of this dynamic field, and presents it in a way that is easy to learn. Covering all the essential topics in a student-friendly style, this best-selling preparatory chemistry text provides students with all the help they need to master basic concepts, overcome common math difficulties, and develop strong problem-solving skills. Highlights of the Seventh Edition * NEW! Making It Real sections relate the subject at hand to high-interest topics that demonstrate applications and motivate learning. * NEW! Redesigned artwork enhances visualization of key topics and illustrates the molecular nature of chemistry. * NEW! The book's Web site includes a new bonus chapter on Biochemistry as well as the chapter on Organic Chemistry. * NEW! eGrade, Wiley's online quizzing and homework management program, allows students to do practice tests and email assignments directly to the instructor. * The author's student-friendly writing style is enhanced with easy-to-understand analogies and examples of current topics of interest. * Frequent testing through in-chapter Checking It Out sections, end-of-chapter problems (100 new to this edition!), and cumulative tests reinforces concepts and study skills on an ongoing basis. * Interactive Learning problems on the Web show how to set up and solve problems, and provide immediate feedback. * Extensive appendices help ease math anxieties and provide a quick and effective review of the mathematical concepts used in introductory chemistry.
