The Stages of Psychosocial Development According to Erik H. Erikson Stephanie Scheck, 2014-11-13 Scientific Essay from the year 2005 in the subject Psychology - Developmental Psychology, grade: 1,0, University of Kassel, language: English, abstract: Erik H. Erikson (1902 – 1994) is without a doubt one of the most outstanding psychoanalysts of the last century. The native Dane and later US-American further developed the psychosocial aspects and the developmental phases of adulthood in Sigmund Freud's stage theory. It is Erikson's basic assumption that in the course of a lifetime, the human being goes through eight developmental phases, which are laid out in an internal development plan. On each level, it is required to solve the relevant crisis, embodied by the integration of opposite poles presenting the development tasks, the successful handling of which is in turn of importance for the following phases. The term crisis does not have a negative connotation for Erikson, but rather is seen as a state, which through constructive resolution leads to further development, which is being integrated and internalized into the own self-image. Each (component) comes to its ascendance, meets its crisis, and finds its lasting solution (...) toward the end of the stages mentioned. All of them exist in the beginning in some form. Hence, the human development is a process alternating between levels, crises, and the new balance in order to reach increasingly mature stages. In detail, Erikson studied the possibilities of an individual's advancement and the affective powers that allow it to act. This becomes particularly obvious in the eight psychosocial phases, which now should be the focus of this paper. This demonstrates that Erikson did see development as above all: a lifelong process.

The Stages of Life Clifford Anderson, 1995 Step by step, Dr. Anderson reveals and explains his groundbreaking discovery of what he calls the maturation process--a template built into the human unconscious that carries within itself the overall design for psychological growth and through which we can become psychologically mature.

EBOOK: Co-ordinating Community Care John Ovretveit, 1993-06-16 An exploration of how people from different professions and agencies work together to meet the health and social needs of people in a community. It is about making the most of different skills to meet people's needs and creating satisfying and supportive working groups. It is the details of making community care a reality. The effectiveness and quality of care a person receives depends on getting the right professionals and services, and also on the support given to the person's carers. Services must be co-ordinated if the person is to benefit, but co-ordination is more difficult with the increasing change, variety and complexity of health and social services in the 1990s. This book challenges the assumptions that services are best co-ordinated by multiprofessional and multi-agency teams, and that community care teams are broadly similar. It demonstrates when a team is needed and how to overcome differences between professions, and between agency policies and philosophies. Drawing on ten years of consultancy research with a variety of teams and services, the author gives practical guidance for managers and practitioners about how to set up and improve co-ordination and teamwork. The book combines practical concerns with theoretical depth drawing on organization and management theory, psychology, psychoanalysis, sociology, economics and government studies.
