Mobile Location Services Andrew Jagoe,2003 -- Includes case studies based on real world solution deployments with Vicinity, ATX, Ford and Hutchison 3G.-- Insights into differences between solutions for US and European marketplaces.-- Includes a software development kit for building a basic Location Service Solution.Mobile applications must be much smarter than desktop web applications. These applications need to know user's location, surroundings, and provide directions on how to get there. Developers face many challenges, including how to pinpoint the user's location, how to retrieve relevant spatial data from map databases that are often 20 Gigabytes in size, and how to support multiple clients. The mobility provided by the proliferation of wireless devices, such as Palm Pilots and onboard navigation systems presents a new class of opportunities and problems for application developers. This book provides an end-to-end solution guide to understand the issues in location-based services and build solutions that will sell. Complete with software and industry case studies, this book is an essential companion to anyone wanting to build the next killer application. The more than one million auto-based telematics terminals that have been installed by year-end 2001 are ample testimony of the opportunities and attractiveness of the mobile location services market. This large and growing installed base of subscribers also provides multiple implementation examples, which are incorporated into the text

Usability Design for Location Based Mobile Services in Wireless Metropolitan Networks Etienne Samii,2007-11-12 Inhaltsangabe:Abstract: The market of mobile technologies is growing at an enormous rate worldwide. With the latest developments in technology, new services are being invented which were not even possible some years ago. As new devices, applications and services emerge, also the number of mobile users is increasing in a rapid manner. Mobile broadband networks like UMTS, EDGE or Wireless LAN make it possible to reach a large group of users who gain access with their personal mobile devices, equipped with multimedia and data capabilities. Due to this development, new interesting possibilities arise for many areas. One of these areas is the tourism sector, which is being referred to in this thesis. The so-called m-tourism (mobile tourism) is an emerging field with an enormous marketing potential, as described in Chapter 2. Recent hardware inventions and developments are greatly pushing the market share. Companies are offering tailored products filling the needs of their customers. Personalization of services becomes a popular trend in this sector. But what do users think about such a mobile tourism service? Do they feel the service has added benefits, compared to traditional media and Web-

based services? Are those products really user friendly? What would be the crucial applications and qualities that make the big difference ? A range of usability issues concerning mobile services is being discussed in the science community; are there already viable, good solutions? With the recent hype of so-called location based services, the consumer keeps calling for more usable products, featuring more intuitive interfaces. Others may fear being overwhelmed with features. Especially for the senior users, a relatively big target group for most mobile applications, these products often remain a mystery. Usability has been and should always remain a key element for quality software and successful applications. In this thesis, several applications are described, some of their user interfaces are analyzed and major flaws discovered. Furthermore, a corresponding prototype user interface is introduced with a specific analysis of each development step, taken from the book The Usability Engineering Lifecycle by Deborah J. Mayhew. Once prototypical realisations are available, users can validate the implemented approaches and evaluate concepts and realization details from their point of view. Such first user experiences are a valuable guidance for further [...]

Location Management and Routing in Mobile Wireless Networks Amitava Mukherjee,Somprakash Bandyopadhyay,Debashis Saha,2003 Annotation The most common complaints of today's cell phone users are poor reception, a lost signal that cuts off a call, and the inability to put a call through. This book is an in-depth examination of two of the hottest research areas relating to these challenges: location management and mobile wireless routing

Location-Based Mobile Games Davide Spallazzo,Ilaria Mariani,2018-02-21 This book approaches Location Based Mobile Games from a design perspective, investigating the peculiar traits that make them compelling contemporary practices and challenging fields of investigation. Relying on an interdisciplinary theoretical background and empirical studies, it delves into LBMGs' intertwining theoretical assumptions and describes their translation into practice. The authors examine these games from different perspectives, exploring how they can impact the way we look at our surroundings, their influence on our social dimension, their ability to translate a wide range of information into a game experience, and the negotiations they activate by intertwining two realities. Each issue is addressed from a twofold perspective: that of the designers who craft the games, and that of the users who interpret the designers' choices and take part in the game experience. In so doing, the book covers the relationship between processes of designing and playing, investigating games that communicate through meaningful interactions, share perspectives as forms of narratives, and integrate physicality and surroundings in the play activity. The reasoning advanced throughout the chapters will benefit researchers, designers and entrepreneurs in the field, as it provides a novel perspective on LBMGs, seeks to increase designers' awareness of often-neglected issues, and suggests interpretations and practices that can impact how commercial games are designed.

Location Privacy Protection in Mobile Networks Xinxin Liu,Xiaolin Li,2013-10-17 This SpringerBrief analyzes the potential privacy threats in wireless and mobile network environments, and reviews some existing works. It proposes multiple privacy preserving techniques against several types of privacy threats that are targeting users in a mobile network environment. Depending on the network architecture, different approaches can be adopted. The first proposed approach considers a three-party system architecture where there is a trusted central authority that can be used to protect users' privacy. The second approach considers a totally distributed environment where users perform privacy protection by themselves. Finally, more general system architecture is discussed including how a semi-trusted server may exist, but users need to collaborate to achieve maximized privacy protection. This brief is designed for researchers and professionals working with privacy preservation, mobile networks, and threat models. The variety of approaches presented makes it useful for students as well.
