Hot Property Rob Nijskens, Melanie Lohuis, Paul Hilbers, Willem Heeringa, 2019-06-14 This open access book discusses booming housing markets in cities around the globe, and the resulting challenges for policymakers and central banks. Cities are booming everywhere, leading to a growing demand for urban housing. In many cities this demand is out-pacing supply, which causes house prices to soar and increases the pressure on rental markets. These developments are posing major challenges for policymakers, central banks and other authorities responsible for ensuring financial stability, and economic well-being in general. This volume collects views from high-level policymakers and researchers, providing essential insights into these challenges, their impact on society, the economy and financial stability, and possible policy responses. The respective chapters address issues such as the popularity of cities, the question of a credit-fueled housing bubble, the role of housing supply frictions and potential policy solutions.

Given its scope, the book offers a revealing read and valuable guide for everyone involved in practical policymaking for housing markets, mortgage credit and financial stability.

Political Cycles and the Macroeconomy Alberto Alesina, Nouriel Roubini, Gerald D. Cohen, 1997 This book examines how electoral laws, the timing of election, the ideological orientation of governments, and the nature of competition between political parties influence unemployment, economic growth, inflation, and monetary and fiscal policy. The book presents both a thorough overview of the theoretical literature and a vast amount of empirical evidence.

Does Inflation Targeting Matter? Laurence M. Ball, Niamh Sheridan, 2003-06-01 This paper asks whether inflation targeting improves economic performance, as measured by the behavior of inflation, output, and interest rates. We compare 7 OECD countries that adopted inflation targeting in the early 1990s to 13 that did not. After the early 1990s, performance improved along many dimensions for both targeting and nontargeting countries. In some cases, the targeters improved by more. However, these differences are explained by the fact that targeters performed worse than nontargeters before the early 1990s, and there is regression towards the mean. Once one controls for this, there is no evidence that inflation targeting improves performance.

Asset Prices and the Real Economy Forrest Capie,Geoffrey

E. Wood,2016-01-15 The recession which many countries experienced in the early 1990s had certain unusual aspects. Most notably, and common to all countries, was the behaviour of asset prices relative to the general price level. In consequence, reasons were sought to explain the special characteristics of the recession and as a result of the behaviour of asset prices attention turned to 'Debt-Deflation Theories' associated in different forms with Keynes and Irving Fisher. The contributors to this volume discuss the significance of debt deflation. Their striking common feature is that, on the evidence presented here, the behaviour of asset prices should not be of great concern to policy makers, or to those attempting to understand economic behaviour. However, residual doubts remain over the Japanese case.
