Find cell phones' area online by cell tower triangulation utilizing LAC (Location Area Code) and Celled from PC, iPhone or Android phone. Cell tower triangulation utilizes the LAC and Cellid to focus the position of a cellular smartphone. With information from no less than three cell towers, this strategy can ascertain a handset's area exactly. Each one base station covers a certain region, the more cell towers in your general vicinity, the more precise result it delivers. So the thickness of cell towers decides the precision. For the most part, the thickness is higher in the urban zones particularly at downtown. While in country territories, where there are less cell towers, the result is less precise. Handbook of Mobile Data Privacy Aris Gkoulalas-Divanis, Claudio Bettini, 2018-10-26 This handbook covers the fundamental principles and theory, and the state-of-the-art research, systems and applications, in the area of mobility data privacy. It is primarily addressed to computer science and statistics researchers and educators, who are interested in topics related to mobility privacy. This handbook will also be valuable to industry developers, as it explains the state-of-the-art algorithms for offering privacy. By discussing a wide range of privacy techniques, providing in-depth coverage of the most important ones, and highlighting promising avenues for future research, this handbook also aims at attracting computer science and statistics students to this interesting field of research. The advances in mobile devices and positioning technologies, together with the progress in spatiotemporal database research, have made possible the tracking of mobile devices (and their human companions) at very high accuracy, while supporting the efficient storage of mobility data in data warehouses, which this handbook illustrates. This has provided the means to collect, store and process mobility data of an unprecedented quantity, quality and timeliness. As ubiquitous computing pervades our society, user mobility data represents a very useful but also extremely sensitive source of information. On one hand, the movement traces that are left behind by the mobile devices of the users can be very useful in a wide spectrum of applications such as urban planning, traffic engineering, and environmental pollution management. On the other hand, the disclosure of mobility data to third parties may severely jeopardize the privacy of the users whose movement is recorded, leading to abuse scenarios such as user tailing and profiling. A significant amount of research work has been conducted in the last 15 years in the area of mobility data privacy and important research directions, such as privacy-preserving mobility data management, privacy in location sensing technologies and location-based services, privacy in vehicular communication networks, privacy in location-based social networks, privacy in participatory

sensing systems which this handbook addresses.. This handbook also identifies important privacy gaps in the use of mobility data and has resulted to the adoption of international laws for location privacy protection (e.g., in EU, US, Canada, Australia, New Zealand, Japan, Singapore), as well as to a large number of interesting technologies for privacy-protecting mobility data, some of which have been made available through open-source systems and featured in real-world applications.

Building a Dedicated GSM GPS Module Tracking System for Fleet Management Franjeh El Khoury, Antoine Zgheib, 2018-01-31 This book shows how to build a INFelecPHY GPS Unit (IEP-GPS) tracking system for fleet management that is based on 3G and GPRS modules. This model should provide reliability since it deals with several protocols: 1) HTTP and HTTPS to navigate, download and upload in real time the information to a web server, 2) FFTP and FTTTPS to handle in a non-real time the files to the web application, and 3) SMTP and POP3 to send and receive email directly from the unit in case of any alert. Similar to a mobile device, but without screen for display, it is multifunctional because it links to a GPRS module, a camera, a speaker, headphone, a keypad and screen.

RFID is a technology that can provide decision makers with real-time information to result in better and timelier decisions. It can help increase efficiency, security, and asset control. This second edition contains updated information on the technology and its uses, new and updated examples, and a new case study. This book provides readers with no prior knowledge of RFID with the basics of the technology, guidelines for considering its use, examples of how RFID is being used effectively in a variety of organizations, and guidelines for implementing an RFID system.

Criminal Procedures Marc L. Miller, Ronald F. Wright, 2019-03-07 Criminal Procedures: Cases, Statutes, and Executive Materials, Sixth Edition is noted for its comprehensive coverage and excellent selection and editing of cases and materials. The book is known for its special focus on a rich selection of materials from multiple institutions, including primary materials from U.S. Supreme Court cases, state high court cases, state and federal statutes, rules of procedure, and police and prosecutorial policies, along with materials from social science studies. The new Sixth Edition retains the casebook's engaging writing style and division of materials into "teachable chunks." Updated cases are chosen for their contemporary accuracy and feel to complement essential cases of historical value. Taken together, the principal materials highlight procedural variety, focus on real process topics, provide the political context, and consider the impact of procedures on the various parties involved. The scholarly expertise and experience of the authors is especially reflected in the Criminal Procedure II materials, which includes coverage of prosecutorial charging, plea bargaining, and sentencing. Their frequent use of Problems gives instructors options for applying concepts and doctrines in realistic practice settings. New to the Sixth Edition: Two new authors join the editorial team: Jenia Iontcheva Turner of SMU Dedman School of Law and Kay L. Levine of Emory University School of Law. With her doctoral training in Socio-Legal Studies and her balanced experience as a prosecutor and a defense attorney in state court, Professor Levine sharpens the focus of the book on the real-world operation of courtroom actors in high-volume state systems. With her background in international criminal tribunals and comparative criminal procedure, Professor Turner strengthens the comparisons between court systems in the U.S. and those around the world. As experienced and celebrated classroom teachers, both Professors Turner and Levine bring closer attention to student learning needs in every chapter of the book. More examples and discussion demonstrate the effects of new technologies on criminal procedure. A revamped Chapter 1 offers a deeper exploration of competing models of policing and useful background about policing organizations. Reorganized Chapters 2 and 7 introduce students to the shifting analytical frameworks that the U.S. Supreme Court now employs to evaluate searches in the context of technological devices that store and collect large amounts of data. Chapter 6 relies on current newsworthy debates about police use of force to explore the alternatives and supplements to the exclusionary rule remedy. A revamped Chapter 12 surveys the major changes in the use of money bail and risk assessment algorithms, previewing the prospects for further system reforms. Chapter 13 covers newsworthy recent changes in the charging policies and diversion practices of prosecutors' offices, especially those in urban areas such as Philadelphia. Chapter 17 expands its coverage of the tensions between fair trials and public trials, including new materials on public access to court files and statistics. A refocused Chapter 19 provides a more detailed and vivid portrait of sentencing hearings and the use of risk assessment instruments. Professors and students will benefit from: Materials that support class discussion, including criminal court actors beyond the Justices of the U.S. Supreme Court: the vision is "street level federalism" Materials that portray for students the range of current practices in criminal justice rather than a rushed historical narrative about doctrinal trends A supporting website that offers

exemplar documents from legal practice, recent news with relevance for criminal procedure, and brief video lectures to introduce each major unit. Emphasis on high-volume practical issues in criminal procedure instead of intricate but rarely-encountered questions. Intuitive organization—tracking the typical sequence of events in criminal investigations and in the criminal courts—that makes it easy to see connections among different areas of the law.

Online around the World Laura M. Steckman, Marilyn J. Andrews, 2017-05-24 Covering more than 80 countries around the world, this book provides a compelling, contemporary snapshot of how people in other countries are using the Internet, social media, and mobile apps. How do people in other countries use the social media platform Facebook differently than Americans do? What topics are discussed on the largest online forum—one in Indonesia, with more than seven million registered users? Why does Mongolia rate in the top-ten countries worldwide for peak Internet speeds? Readers of *Online around the World: A Geographic Encyclopedia of the Internet, Social Media, and Mobile Apps* will discover the answers to these questions and learn about people's Internet and social media preferences on six continents—outside of the online community of users within the United States. The book begins with an overview of the Internet, social media platforms, and mobile apps that chronologically examines the development of technological innovations that have made the Internet what it is today. The country-specific entries that follow the overview provide demographic information and describe specific events influenced by online communications, allowing readers to better appreciate the incredible power of online interactions across otherwise-unconnected individuals and the realities and peculiarities of how people communicate in today's fast-paced, globalized, and high-technology environment. This encyclopedia presents social media and the Internet in new light, identifying how the use of language and the specific application of human culture impacts emerging technologies and communications, dramatically affecting everything from politics to social activism, education, and censorship.
