You'll master techniques for making your web service available to other programs--but you'll also discover ways to control its availability through authentication and encryption. Kris Jamsa's expert coverage goes above and beyond, providing advanced optimization tips, including instructions for implementing asynchronous operations. He also shows you a neat trick for calling a web service from within an HTML page using JavaScript. Want an even neater trick? Check out the section on making money with your web service, where you'll find a billing model that will work for you.
