Then all aspects of photo editing are covered, and no stone will be left unturned!

Everything will be shown in easy to follow steps. You will learn how to improve and correct photographs professionally, and how to work with layers. You'll learn how to crop images, how to resize images, how to save images for web, how to save images for print, and how to make PDF's. You will learn professional retouching, like skin retouching with frequency separation, Liquify (for example to make someone thinner), how to let the program remove objects, and how to remove objects with the clone and heal tool. You will learn how to use masks, and how to make selections. In Chapter 5 we will go in to making professional selections with just a single click (this is not possible in Photoshop!) using the patented 'U-point technology'. The U-point technology is delivered by the Google Nik Collection, a professional high-end photo editing 'plug-in' suite, used by professional photographers. of each blending mode will be shown and explained. You'll learn how to select hair, how to use and make patterns and gradients, and how to use and adjust a tablet. You will learn everything about brushes. How to create brushes yourself, the many special effects you can create with brushes (e.g. to create a flock of birds with just a single stroke, or to create grunge textures), and how to download free creative brushes. We will look at a popular skin retouching technique used by professionals called 'frequency separation', and different methods for dodging and burning (selectively darkening and lightening of an image). We will discuss color theory, and it's direct connection to the ways color is manipulated in photo manipulation programs. We'll discover creative filters that bring a different look and feel to your image. This book also comes with 8 hours of HD video. At the video platform you can ask me questions personally, which I will answer within 48 hours! I hope to meet you in the discussion forum.
