Infographics have become increasingly popular educational tools for visually conveying ideas and information—in class projects, in daily lessons, and for promoting school and library programs. This book—the only one of its kind—helps you create your own computer-generated visuals for your class and library using common software platforms and free web-based applications. A perfect primer for educators with little or no technological savvy, this resource features charts, tables, screenshots, bars, and graphs for making infographics easy to reproduce and create. Author Peggy Milam Creighton discusses the benefits of utilizing visuals with students and provides tips and strategies for creating your own graphics for various educational settings. The reference is organized into three topics: how to create infographics with Microsoft software such as Word, Excel, and PowerPoint; how to use graphics to support school library programs; and why using these visual-based learning tools is important. The work features easy-to-use tutorials, lesson plans, and project ideas for students.

Stealing MySpace Julia Angwin, 2009-03-17 A few years ago, MySpace.com was just an idea kicking around a Southern California spam mill. Scroll down to the present day and MySpace is one of the most visited Internet destinations in America, displaying more than 40 billion webpage views per month and generating nearly \$1 billion annually for Rupert Murdoch's online empire. Even by the standards of the Internet age, the MySpace saga is an astounding growth story, which climaxed with the site's acquisition by Murdoch's News Corporation in 2005 for a sum approaching one billion dollars. But more than that, it may be the defining drama of the digital era. In *Stealing MySpace*, Pulitzer Prize-winning journalist Julia Angwin chronicles the rise of this Internet powerhouse. With an unerring eye, Angwin details how MySpace took the Internet by storm by grabbing the best ideas from around the Web, encouraging pinup stars such as Tila Tequila to make their home on its pages and giving everyone freedom to experiment with online identities—including using somebody else's identity. *Stealing MySpace* introduces us to the site's founders, Chris DeWolfe and Tom Anderson, who dabbled in computer hacking, online pornography, spam, and spyware before starting MySpace. Although their street savvy, doggedness, and clubbing skills far eclipsed their tech prowess, they stumbled their way to success and soon found themselves at ground zero of a high-stakes war that pitted Rupert Murdoch against his frequent nemesis, the combative Viacom CEO Sumner Redstone. Angwin sheds light on the dizzying backroom deals that allowed Murdoch to snatch MySpace from Viacom's grasp even as the MySpace founders remained in the dark about their own fate. Then she takes us inside the Murdoch empire as DeWolfe and Anderson lobby furiously to regain control of their creation. Venturing beyond the business aspects of the story, Angwin also explores the Internet culture, a voyeuristic world in which MySpace must stay one step ahead of amateur pornographers, sexual predators, and "spoofers" who set up fake profiles (Rupert Murdoch himself tolerates dozens of phony "Ruperts" on the site) and cope with the general excesses and sometimes illegal acts of a community of account holders equal in number to the population of Japan. In

Stealing MySpace, Julia Angwin dishes on the epic real-world battle for control of a virtual empire. In a savvy, smart, fast-paced narrative reminiscent of Bryan Burrough and John Helyar's Barbarians at the Gate and Michael Lewis's The New New Thing, Stealing MySpace tells is the whole gripping story behind a breakout cultural phenomenon.

Human-Harmonized Information Technology, Volume 2 Toyoaki Nishida, 2017-04-20 Going from the philosophy and concepts to the implementation and user study, this book presents an excellent overview of Japan's contemporary technical challenges in the field of human-computer interaction. The next information era will be one in which information is used to cultivate human and social potential. Driven by this vision, the outcomes provided in this work were accomplished as challenges to establish basic technologies for achieving harmony between human beings and the information environment by integrating element technologies including real-space communication, human interfaces, and media processing. Ranging from the neuro-cognitive level to the field trial, the research activities integrated novel perceptual technologies that even exceed human ability to sense, capture, and affect the real world. This book grew out of one of the CREST research areas funded by the Japan Science and Technology Agency. The theme of the project is "the creation of human-harmonized information technology for convivial society", where 17 research teams aimed at a common goal. The project promotes a trans-disciplinary approach featuring (1) recognition and comprehension of human behaviors and real-space contexts by utilizing sensor networks and ubiquitous computing, (2) technologies for facilitating man-machine communication by utilizing robots and ubiquitous networks, and (3) content technologies for analyzing, mining, integrating, and structuring multimedia data including those in text, voice, music, and images. This is the second of two volumes, which is contributed by eight team leaders. Besides describing the technical challenges, each contribution lays much weight on discussing the philosophy, concepts, and the implications underlying the project. This work will provide researchers and practitioners in the related areas with an excellent opportunity to find interesting new developments and to think about the relationship between human and information technology.
