An East Asian Challenge to Western Neoliberalism Niv Horesh, Kean Fan Lim, 2017-08-03

Analysts generally agree that, in the long term, the biggest challenge to American hegemony is not military, but rather China's economic rise. This perception is spread in no small measure because Xi Jinping has – in the face of patent military inferiority – conducted himself much more boldly on the world stage than Hu Jintao. Meanwhile, China has also begun conjuring up an alternative vision for global leadership, now widely termed as the 'China model'. This book therefore offers a critical and comprehensive explanation of the China model and its origins. Using a range of case studies, covering varying historical and geographical approaches, it debates whether the Chinese experience in the last three decades of economic reform should be interpreted as an answer to the reigning hegemony of neoliberalism, or rather a further reinforcement of it. To answer these questions, it provides an investigation into what China may have learned from its East Asian neighbours' earlier economic successes. It also examines how it is responding to and might even reconfigure the world political-economic system as it develops fresh and potentially more powerful regulatory capacities. Providing a multi-dimensional analysis of the 'China model', the book will be of interest to students and scholars of Chinese Economics, Economic Geography and Chinese Studies.

Globalization and New Intra-Urban Dynamics in Asian Cities Natacha Aveline-

Dubach□Sue-Ching Jou□Hsin-Huang Michael Hsiao□□, 2014-08-04 This book presents a set of essays on the globalization and intra-urban dynamics of the Asian cities conducted by Taiwanese and French researchers. It covers four main themes: "culture-led regeneration projects," "dynamics of second-tier cities," "urban redevelopment and land issues," and "new urban spaces of regulation, associational life, and civic action." It involved comparing research subject priorities in this field as well as the approaches chosen to deal with them within a geographical zone extended from Northeast to southern Asia. Rather than a comparison between Western and Asian visions of the same urban objects, the project aimed to highlight differences and/or similarities in the approaches of scientific communities, inevitably influenced by national issues. With great articulation and discourse between urban reality and theories, it also observes distinctive approaches of urban research teams respectively in France and Taiwan.

P'ungsu Hong-key Yoon, 2017-12-04 The first scholarly book to address Korean geomancy

through an interdisciplinary lens. This book is a milestone in the history of academic research on the development and role of geomancy (fengshui in Chinese and p'ungsu in Korean) in Korean culture and society. As the first interdisciplinary work of its kind, it investigates many topics in geomancy studies that have never been previously explored, and contains contributions from a number of disciplines including geography, historical studies, environmental science, architecture, landscape architecture, religious studies, and psychoanalysis. While almost all books in English about geomancy are addressed to general readers as practical guides for divining auspicious locations,

goal of the work is a definite statement on the language and/or dialect in question with regard to genetics, typology, and/or universal elements. Of interest to general linguists as well as those specializing in Afro-Asiatic languages.

This volume intends to explore and understand the dynamics created by this process of transition.

International Collation of Traditional and Folk Medicine Takeatsu Kimura,Paul P H But,Ji-Xian Guo,Chung Ki Sung,1996-04-19 Traditional folk medicine practices in Korea, China, Japan, and Hong Kong — all located in Northeast Asia — are comparable. Since different usage of a medicine may reflect cultural or regional differences, a detailed collation of the folk knowledge of traditional medicine can help to distinguish between true medical knowledge and superstition. In this first volume of a series of books that will compare the differences and similarities of traditional folk medicine practiced around the world, 200 of the most frequently used medicinal plants in Northeast Asia are selected by the international editorial board to be featured. The folk medical knowledge in each entry includes the botanical and local names of the drug, special processing, the administration method, efficacy in each country, contra-indications, and side effects. Also included are the scientific data on their chemistry and pharmacology, with references. All this scientific information should be a valuable asset to medical and research scientists working on the bioactive components of natural products.

It will be extremely useful to scientists and individuals who are not familiar or facile with the literature on medicinal plants of northeast Asia." Journal of Natural Products "It is a notable achievement to have a brief summary of the scientific information on so many medicinal plants available, especially since this information is scattered through journals which frequently are difficult to obtain ... the volume under review is a useful compilation of information on indigenous medicinal plants in this region and it is particularly noteworthy that an international collaboration made the book possible."
