Carbon Programming K. J. Bricknell, Kevin Bricknell, 2001 The most up-to-20011029 book on C programming for the Carbon API, Aqua user interface, and Mac OS X system software. Contains highly requested information within the Macintosh community by both individuals and instructors. Upon completion of the book, the reader will have sufficient knowledge to write a serious and useful Macintosh application in C and C++ that will run on Mac OS 8, 9, and the new OS X. Written by the author of MacTech magazine's popular online programming tutorial. Carbon Programming is a comprehensive guide that is logically organized, compatible with the current system software, and includes ready-to-run demonstration programs within each chapter. The book covers Mac programming using the Carbon API. Topics include Scrap, Event Manager, Appearance Manager, Controls, and Lists. Kevin Bricknell is the author of Macintosh C: Programming the Mac OS in C, Classic Edition, which was first published on the Internet in early 1996. The content is now hosted by MacTech magazine, the only monthly magazine focused on Macintosh technology and development, distributed in 64 countries, and read by tens of thousands of programmers and solution providers. Flash MX Application And Interface Design Connor McDonald, Paul Prudence, Gerald YardFace, Peter Aylward, Fay Rhodes, Robbie Shepherd, Ken Jokol, 2013-11-27 The days of Flash as a creative luxury are long gone. After months of downsizing, Flash creativity has been on a huge rationalization program. It is no longer enough to present animation in millions of colors and a hundred transparencies. It is no longer sufficient to provide interactivity and dynamism for their own sake. The purpose of this collection is to show how designers have taken Flash and made it work for its supper. What we discover is a series of creations that place Flash at the hub of cutting edge web content. The end result is a snapshot of Flash as the ideal medium. In these amazing examples, we see the software pushed to its limits to create unbeatable applications—a collapsible family tree, an interactive video learning system, and a drawing tool, capable of running online! Beyond this, we dip into the back-end capabilities to look at how to improve Flash still further. Some staple XML and PHP routines are brought in to add a bit of spice, while Flash's mysterious sharedObject command is hunted down and tamed to create a hybrid Tamagotchi houseplant—perfectly suited to lure surfers back to your website!

Fluent Python Luciano Ramalho, 2015-07-30 Python's simplicity lets you become productive quickly, but this often means you aren't using everything it has to offer. With this hands-on guide, you'll learn how to write effective, idiomatic Python code by leveraging its best—and possibly most neglected—features. Author Luciano Ramalho takes you through Python's core language features and libraries, and shows you how to make your code shorter, faster, and more readable at the same time. Many experienced programmers try to bend Python to fit patterns they learned from other languages, and never discover Python features outside of their experience. With this book, those Python programmers will thoroughly learn how to become proficient in Python 3. This book covers: Python data model: understand how special methods are the key to the consistent behavior of objects Data structures: take full advantage of built-in types, and understand the text vs bytes duality in the Unicode age Functions as objects: view Python functions as first-class objects, and understand how this affects popular design patterns Object-oriented idioms: build classes by learning about references, mutability, interfaces, operator overloading, and multiple inheritance Control flow: leverage context managers, generators, coroutines, and concurrency with the concurrent.futures and asyncio packages Metaprogramming: understand how properties, attribute descriptors, class decorators, and metaclasses work
