Report 27: Condition Assessment of Roofs - Final Report of CIB W.83/RILEM TC 166-RMS - Condition Assessment Task Group CIB W 83/RILEM TC 166-RMS, Asphalt and Tar Roofing and Siding Products ,1975

Condition Assessment of Roofs ,2003 The need to properly assess the condition of the roof system is critical from an environmental and monetary point of view. The visual and physical inspection of the roof is the first step in deciding whether to repair, replace or recover the system. This information is required to properly budget and manage resources. Additionally, it would help the environment by reducing the amount of material sent to landfills. Every country has its own standards and all practitioners have their own approach to the assessment. This report attempts to provide a guideline for the assessment of low-slope roof systems. A flowchart for the assessment is presented. Use of this flowchart to carry out inspections should help minimize incorrect actions such as needlessly replacing roofs. Moreover, different test methods and standards are offered from various countries. This report is geared towards individuals who are involved in the roofing industry and who have a general understanding of condition assessment. The flowchart, standards, and test procedures

mentioned in this document are presented as a resource for reference purposes. All decisions as to the use of the flowchart, test methods and interpretation of any data are to be based on professional knowledge and expertise.

Forensic Engineering Stephen E. Petty, 2017-12-19

A comprehensive resource that builds a bridge between engineering disciplines and the building sciences and trades, *Forensic Engineering: Damage Assessments for Residential and Commercial Structures* provides an extensive look into the world of forensic engineering. With a focus on investigations associated with insurance industry claims, the book describes methodologies for performing insurance-related investigations including the causation and origin of damage to residential and commercial structures and/or unhealthy interior environments and adverse effects on the occupants of these structures. Edited by an industry expert with more than 30 years of experience, and authors with more than 100 years of experience in the field, the book takes the technical aspects of engineering and scientific principles and applies them to real-world issues in a non-technical manner. It provides readers with the experiences, investigation methodologies, and investigation protocols used in, and derived from completing thousands of forensic engineering investigations. It begins with providing a baseline methodology for completing forensic investigations and closes with advice on testifying as an expert witness. Much of what must be known in this field is not learned in school, but is based upon experience since recognizing the cause of a building system failure requires a blending of skills from the

white collar and blue collar worlds. Such knowledge can be vital since failures (e.g., water entry) often result from construction activities completed out of sequence.. This book details proven methodologies based on over 7,000 field investigations, methodologies which can be followed by both professionals and laymen alike.

Engineering Investigations of Hurricane Damage

David B. Peraza, William L. Coulbourne, Morgan Griffith, 2014 This publication provides civil engineers with the background and guidance necessary to conduct engineering damage investigations of structures following hurricanes, focusing particularly on distinguishing between wind damage and water damage.

Planting Green Roofs and Living Walls Nigel

Dunnett, Noël Kingsbury, 2004 This book introduces a revolutionary new concept to gardeners. Planting on roofs and walls began in Europe, but it is now becoming popular all over the world. Green roofs and walls reduce pollution and run-off, and also

help insulate and reduce the maintenance needs of buildings. *Planting Green Roofs and Living Walls* discusses the practical techniques required to make planting on roofs and walls a reality. It describes how roofs may be modified to bear the weight of vegetation, considers the different options for drainage layers and growing media, and lists the plants suitable for different climates and environments. This informative book will encourage gardeners everywhere to consider the enormous benefits to be gained from planting on their roofs and walls.

Time-Sensitive Remote Sensing Christopher D. Lippitt,Douglas A. Stow,Lloyd L. Coulter,2015-06-02 This book documents the state of the art in the use of remote sensing to address time-sensitive information requirements. Specifically, it brings together a group of authors who are both researchers and practitioners, who work toward or are currently using remote sensing to address time-sensitive information requirements with the goal of advancing the effective use of remote sensing to supply time-sensitive information. The book addresses the theoretical implications of time-sensitivity on the remote sensing process, assessments or descriptions of methods for expediting the delivery and improving the quality of information derived from remote sensing, and describes and analyzes time-sensitive remote sensing applications, with an emphasis on lessons learned. This book is intended for remote sensing scientists, practitioners (e.g., emergency

responders or administrators of emergency response agencies), and students, but will also be of use to those seeking to understand the potential of remote sensing to address a range of pressing issues, particularly natural and anthropogenic hazard response.
