The Selected Works of Arne Naess Arne Naess,2007-11-17 Arne Naess is considered one of the most important philosophers of the twentieth century. He has been a tremendously prolific author, yet his works as a whole have remained largely unavailable – until now. Springer made available for the first time, a definitive 10-volume collection of Arne Naess’s life’s works: The Selected Works of Arne Naess. The Selected Works of Arne Naess (SWAN) presents a major overview of Arne Naess’s thinking and provides an extensive collection of this prolific philosopher’s principal writings. Some of Naess’s most important publications have never before been available in English. Many others are out of print. Often, his papers were published in obscure and inaccessible journals. And because Naess has been so prolific, many of his most important papers still remain unpublished. The publication of SWAN makes Naess’s work more fully accessible to scholars, students, and critics alike.

Diagram Groups Victor Guba,Mark Sapir,1997 Diagram groups are groups consisting of spherical diagrams (pictures) over monoid presentations. They can be also defined as fundamental groups of the Squier complexes associated with monoid presentations. The authors show that the class of diagram groups contains some well-known groups, such as the R. Thompson group F. This class is closed under free products, finite direct products, and some other group-theoretical operations. The authors develop combinatorics on diagrams similar to the combinatorics on words. This helps in finding some structure and algorithmic properties of diagram groups. Some of these properties are new even for R. Thompson's group F. In particular, the authors describe the centralizers of elements in F, prove that it has solvable conjugacy problems, etc.

Image Sequence Processing and Dynamic Scene Analysis T. S. Huang,2012-12-06 This volume contains the proceedings of the NATO Advanced Study Institute on Image Sequence Processing and Dynamic Scene Analysis held 21 June - 2 July, 1982 in Hotel Maritim, Braunlage/Harz, Federal Republic of Germany. The organizing eommittee of the institute consists of T.S. Huang (Director), H.G. Musmann (Co Director), H.H.

Nagel (Consultant), and C.E. Liedtke and W. Geuen (Local 'arrangement). This Institute was devoted to the rapidly emerging field of image sequence processing and dynamic scene analysis which has man! important applications in cluding target tracking, television bandwidth compression, highway traffic moni toring, and analysis of heart wall motion for medical diagnosis. The lectures and discussions in this Institute fell into three overlapping categories: Motion estimation; pattern recognition and artificial intelligence techniques in dynamic scene analysis; and, applications. 1) Motion estimation - One of the most important problems in image sequence analysis and dynamic scene analysis is displacement and motion estimation. For example, in interframe coding using temporal DPCM, displacement estimation and compensation can improve efficiency significantly. Also, estimated motion parameters can be powerful cues in target segmentation, detection, and classification. In this Institute, a number of recently developed techniques for displacement and motion estimation were discussed.
