Ping-Pong (Registered Trademark U. S. No. 36, 854) Arnold Parker,2017-09-12 Excerpt from Ping-Pong (Registered Trademark U. S. No. 36, 854): The Game and How to Play It Many people must have asked themselves, why ping-pong in SO short a time has become so amazingly popular. The answer, I think, is easy, and will be found in the following facts: Firstly, all who have played must allow that it is an excellent game, excellent because it affords amusement for hours together, and because there is no small amount of Skill required to play it at all well; this will account for much of its popularity. But there are other and, I think, weightier reasons. It has been called the poor man's billiards, not that it resembles that king of indoor games any further than that balls are used in the playing of both, but because it supplies its place in the houses of those whose rooms and means are too small to permit the adoption of billiards, since a very small outlay will purchase all accessories necessary for ping-pong; and if the proportions mentioned in a later chapter of this work be Observed as regards height of net, not

only can an excellent game be had on a small table, but any one can learn to play it well and will find himself able to do so on a larger table; play on a small table being excellent practice for play on the club-size table. Office Hours with a Geometric Group Theorist Matt Clay, Dan Margalit, 2017-07-11 Geometric group theory is the study of the interplay between groups and the spaces they act on, and has its roots in the works of Henri Poincaré, Felix Klein, J.H.C. Whitehead, and Max Dehn. Office Hours with a Geometric Group Theorist brings together leading experts who provide one-on-one instruction on key topics in this exciting and relatively new field of mathematics. It's like having office hours with your most trusted math professors. An essential primer for undergraduates making the leap to graduate work, the book begins with free groups—actions of free groups on trees, algorithmic questions about free groups, the ping-pong lemma, and automorphisms of free groups. It goes on to cover several large-scale geometric invariants of groups, including quasi-isometry groups, Dehn functions, Gromov hyperbolicity, and asymptotic dimension. It also delves into important examples of groups, such as Coxeter groups, Thompson's groups, right-angled Artin groups, lamplighter groups, mapping class groups, and braid groups. The tone is conversational throughout, and the instruction is driven by examples. Accessible to students who have taken a first course in abstract algebra, Office Hours with a Geometric Group Theorist also features numerous exercises and in-depth projects designed to engage readers and provide jumping-off points for research projects.
