So You Want to Direct TV? Jacob Pinger,2020-06-30 Becoming a TV director is nothing like other professions. There is no road map. In this book of interviews, working TV directors show you exactly how they did it. No two stories are exactly alike. These deeply personal interviews with a racially and culturally diverse range of eight women and eight men are candid and full of practical insights. For the first time in the 100-plus year history of the entertainment industry there are increasing opportunities to rise into the director's chair. This book reflects the hope and promise of a new era. Open the cover and discover the mentor you deserve.

Justin's Folly Wayne Pinger,2022-01-25 Justin has big plans to expand his network of drug smugglers and pushers; this time he might be successful if he can control his rag-tag group of cousins and manage his enthusiasm. It had been a bitter-sweet adventure but Justin was alone now, gone from the 49th state after a severe health crisis forced the sale of his Deadhorse drug franchise. Justin wouldn't trade his Alaskan adventures for a million but wouldn't pay twenty bucks to do it again. The North Slope was just a memory now; he had bigger fish to fry and greater fortunes to be made.

IBM InfoSphere Streams: Assembling Continuous Insight in the Information Revolution Chuck Ballard,Kevin Foster,Andy Frenkiel,Bugra Gedik,Michael P. Koranda,Senthil Nathan,Deepak Rajan,Roger Rea,Mike Spicer,Brian Williams,Vitali N. Zoubov,IBM Redbooks,2012-05-02 In this IBM® Redbooks® publication, we discuss and describe the positioning, functions, capabilities, and advanced programming techniques for IBM InfoSphere™ Streams (V2), a new paradigm and key component of IBM Big Data platform. Data has traditionally been stored in files or databases, and then analyzed by queries and applications. With stream computing, analysis is performed moment by moment as the data is in motion. In fact, the data might never be stored (perhaps only the analytic results). The ability to analyze data in motion is called real-time analytic processing (RTAP). IBM InfoSphere Streams takes a fundamentally different approach to Big Data analytics and differentiates itself with its distributed runtime platform, programming model, and tools for developing and debugging analytic applications that have a high volume and variety of data types. Using in-memory techniques and analyzing record by record enables high velocity. Volume, variety and velocity are the key attributes of Big Data. The data streams that are consumable by IBM InfoSphere Streams can originate from sensors, cameras, news feeds, stock tickers, and a variety of other sources, including traditional databases. It provides an execution platform and services for applications that ingest, filter, analyze, and correlate potentially massive volumes of continuous data streams. This book is intended for professionals that require an understanding of how to process high volumes of streaming data or need information about how to implement systems to satisfy those requirements. See: <http://www.redbooks.ibm.com/abstracts/sg247865.html> for the IBM InfoSphere Streams (V1) release.
