The Roswell report : fact versus fiction in the New Mexico desert. ,1995

Biodiversity and Human Health Francesca Grifo, Joshua Rosenthal, 1997-02-01 The implications of biodiversity loss for the global environment have been widely discussed, but only recently has attention been paid to its direct and serious effects on human health. Biodiversity loss affects the spread of human diseases, causes a loss of medical models, diminishes the supplies of raw materials for drug discovery and biotechnology, and threatens food production and water quality. Biodiversity and Human Health brings together leading thinkers on the global environment and biomedicine to explore the human health consequences of the loss of biological diversity. Based on a two-day conference sponsored by the National Institutes of Health, the National Science Foundation, and the Smithsonian Institution, the book opens a dialogue among experts from the fields of public health, biology, epidemiology, botany, ecology, demography, and pharmacology on this vital but often neglected concern. Contributors discuss the uses and significance of biodiversity to the practice of medicine today, and develop strategies for conservation of these critical resources. Topics examined include: the causes and consequences of biodiversity loss emerging infectious diseases and the loss of biodiversity the significance and use of both prescription and herbal biodiversity-derived remedies indigenous and local peoples and their health care systems sustainable use of biodiversity for medicine an agenda for the future In addition to the editors, contributors include Anthony Artuso, Byron Bailey, Jensa Bell, Bhaswati Bhattacharya, Michael Boyd, Mary S. Campbell, Eric Chivian, Paul Cox, Gordon Cragg, Andrew Dobson, Kate Duffy-Mazan, Robert Engelman, Paul Epstein, Alexandra S. Fairfield, John Grupenhoff, Daniel Janzen, Catherine A. Laughin, Katy Moran, Robert McCaleb, Thomas Mays, David Newman, Charles Peters, Walter Reid, and John Vandermeer. The

book provides a common framework for physicians and biomedical researchers who wish to learn more about environmental concerns, and for members of the environmental community who desire a greater understanding of biomedical issues.

Serious Educational Game Assessment Leonard A. Annetta, Stephen Carl Bronack, 2011 In an increasingly scientific and technological world the need for a knowledgeable citizenry, individuals who understand the fundamentals of technological ideas and think critically about these issues, has never been greater. There is growing appreciation across the broader education community that educational three dimensional virtual learning environments are part of the daily lives of citizens, not only regularly occurring in schools and in after-school programs, but also in informal settings like museums, science centers, zoos and aquariums, at home with family, in the workplace, during leisure time when children and adults participate in community-based activities. This blurring of the boundaries of where, when, why, how and with whom people learn, along with better understandings of learning as a personally constructed, life-long process of making meaning and shaping identity, has initiated a growing awareness in the field that the questions and frameworks

guiding assessing these environments should be reconsidered in light of these new realities. The audience for this book will be researchers working in the Serious Games arena along with distance education instructors and administrators and students on the cutting edge of assessment in computer generated environments.

King Leopold's Ghost Adam Hochschild, 2019-05-14 With an introduction by award-winning novelist Barbara Kingsolver In the late nineteenth century, when the great powers in Europe were tearing Africa apart and seizing ownership of land for themselves, King Leopold of Belgium took hold of the vast and mostly unexplored territory surrounding the Congo River. In his devastatingly barbarous colonization of this area, Leopold stole its rubber and ivory, pummelled its people and set up a ruthless regime that would reduce the population by half. . While he did all this, he carefully constructed an image of himself as a deeply feeling humanitarian. Winner of the Duff Cooper Prize in 1999, *King Leopold's Ghost* is the true and haunting account of this man's brutal regime and its lasting effect on a ruined nation. It is also the inspiring and deeply moving account of a handful of missionaries and other idealists who travelled to Africa and unwittingly found themselves in the middle of a gruesome holocaust. Instead of turning away, these brave few chose to stand up against Leopold. Adam Hochschild brings life to this largely untold story and, crucially, casts blame on those responsible for this atrocity.

Edith and Florence Stoney, Sisters in Radiology Adrian Thomas, Francis Duck, 2020-08-15
This book explores the lives and achievements of two Irish sisters, Edith and Florence Stoney, who pioneered the use of new electromedical technologies, especially X-rays but also ultraviolet radiation and diathermy. In addition, the narrative follows several intertwined themes as experienced by the sisters during their lifetimes. Their upbringing, influenced by their liberal-minded scientist father, set the tone for both their lives. Irish independence fractured their family heritage. Their professional experiences, fulfilling for Florence as a qualified doctor but often frustrating for Edith as a Cambridge-educated scientist, mirrored those of other aspiring women during this period, when the suffragist movement expanded and women's lobby groups were formed. World War I created an environment in which their unusual specialist knowledge was widely needed, and the sisters' war experiences are carefully examined in the book. But ultimately this is the extraordinary story of two independent but closely bonded sisters and their abiding love and support for one another.

Microbial Action on Hydrocarbons Vivek Kumar, Manoj Kumar, Ram Prasad, 2019-02-08
The book discusses ways to overcome the side effects of using hydrocarbon-based products as energy sources. Hydrocarbons produce raw crude oil waste of around 600,000 metric tons per annum, with a range of uncertainty of 200,000 metric tons per year. The various chapters in this book focus on approaches to reduce these wastes through the application of potential microbes, in a process called bioremediation. The book is a one-stop reference resource on the methods, mechanisms and application of the bio-composites, in the laboratory and field. Focusing on resolving a very pressing environmental issue, it not only provides details of existing challenges, but also offers deeper insights into the possibility of solving problems using hydrocarbon bioremediation.

Fractals in Graz 2001 Peter Grabner, Wolfgang Woess, 2012-12-06 This book contains the proceedings of the conference Fractals in Graz 2001 - Analysis, Dynamics, Geometry, Stochastics that was held in the second week of June 2001 at Graz University of Technology, in the capital of Styria, southeastern province of Austria. The scientific committee of the meeting consisted of M. Barlow (Vancouver), R. Strichartz (Ithaca), P. Grabner and W. Woess (both Graz), the latter two being the local organizers and editors of this volume. We made an effort to unite in the conference as well as in the present proceedings a multitude of different directions of active current work, and to bring together researchers from various countries as well as research fields that all are linked in some way with the modern theory of fractal structures. Although (or because) in Graz there is only a very small group working on fractal structures, consisting of non-insiders, we hope to have been successful with this program of wide horizons. All papers were written upon explicit invitation by the editors, and we are happy to be able to present this representative panorama of recent work on potential theory, random walks, spectral theory, fractal groups, dynamic systems, fractal geometry, and more. The papers presented here underwent a refereeing process.

Modern Mycology J. W. Deacon, 1997-07-14 Modern Mycology is an established text that continues to provide a comprehensive introduction to fungi--a group of organisms distinct from all other forms of life. In keeping with modern teaching methods, this textbook adopts a functional approach and emphasizes the behaviour, physiology, activities and practical significance of fungi. The book contains extensive sections on the fungal pathogens of plants, animals and humans; the roles of fungi in major environmental processes; and the use of fungi as biological control agents of pests and pathogens. Essential reading for undergraduate students taking courses in microbiology and mycology. Fully revised and updated to reflect the many exciting new developments in the field, notably those relating to an understanding of fungal cell biology and the application of fungal molecular genetics. Adopts a functional approach in keeping with modern teaching methods. Maintains tradition of clarity and accessibility set by previous editions. The Day After Roswell Philip Corso, 2012-12-11 Since 1947, the mysterious crash of an unidentified aircraft at Roswell, New Mexico, has fueled a firestorm of speculation and controversy with no conclusive evidence of its extraterrestrial origin -- until now. Colonel Philip J. Corso (Ret.), a member of President Eisenhower's National Security Council and former head of the Foreign Technology Desk at the U.S. Army's Research & Development department, has come forward to tell the whole explosive story. Backed by documents newly declassified through the Freedom of Information Act, Colonel Corso reveals for the first time his personal stewardship of alien artifacts from the crash, and discloses the U.S. government's astonishing role in the Roswell incident: what was found, the cover-up, and how these alien artifacts changed the course of 20th century history.

The Oxford Companion to Philosophy Ted Honderich, 1995 This is the most authoritative and engaging philosophical reference work in English. It gives clear and reliable guidance to all areas of philosophy and to the ideas of all notable philosophers from antiquity to the present day. The scope of the volume is not limited to English-language philosophy: it surveys the foremost philosophy from all parts of the world. A distinguished international assembly of more than two hundred contributors provide almost 2,000 alphabetically arranged entries which are not only instructive but also entertaining: they combine learning, lucidity, elegance, and wit. There are more than fifty extended entries of 3,000 words on the main areas of philosophy and the great philosophers: these include

essays by Alasdair MacIntyre on the history of moral philosophy, Paul Feyerabend on the history of the philosophy of science, Jaegwon Kim on problems of the philosophy of mind, Richard Swinburne on problems of the philosophy of religion, David Charles on Aristotle, Peter Singer on Hegel, Anthony Kenny on Frege, and Anthony Quinton on philosophy itself. Short entries deal with key concepts (for instance, personal identity, time) doctrines (utilitarianism, holism), problems (the mind-body problem, the meaning of life), schools of thought (Marxist philosophy, the Vienna Circle), and practical issues (abortion, vegetarianism). Individual thinkers past (Pythagoras, Confucius, Galileo, Goethe, Burke, Santayana, de Beauvoir, Radhakrishnan) and present (over 150 contemporary figures, such as Chomsky, Derrida, and Popper) are profiled, and eighty of them are depicted in black-and-white portraits. Interspersed throughout are short explanations of particular philosophical terms (qualia, supervenience, iff), puzzles (the Achilles paradox, the prisoner's dilemma), and curiosities (the philosopher's stone, slime). Every entry is accompanied by suggestions for further reading. A chronological chart of the history of philosophy is located at the end of the book, together with fourteen diagrams showing the structure of philosophy and the relations between its subjects and doctrines. This book will be an indispensable guide and a constant source of stimulation and enlightenment for anyone interested in abstract thought, the eternal questions, and the foundations of human understanding.
