Fast Pitch Nic Stone, 2021-08-31 From #1 New York Times bestselling author Nic Stone comes a challenging and heartwarming coming-of-age story about a softball player looking to prove herself on and off the field. Shenice Lockwood, captain of the Fulton Firebirds, is hyper-focused when she steps up to the plate. Nothing can stop her from leading her team to the U12 fast-pitch softball regional championship. But life has thrown some curveballs her way. Strike one: As the sole team of all-brown faces, Shenice and the Firebirds have to work twice as hard to prove that Black girls belong at bat. Strike two: Shenice's focus gets shaken when her great-uncle Jack reveals that a career-ending—and family-name-ruining—crime may have been a setup. Strike three: Broken focus means mistakes on the field. And Shenice's teammates are beginning to wonder if she's captain-qualified. It's up to Shenice to discover the truth about her family's past—and fast—before secrets take the Firebirds out of the game forever.

A History of Performing Pitch Bruce Haynes, 2002-11-06 Haynes (U. of Montreal) traces the history of musical pitch standards over the last four centuries, linking frequency values to pitch names and telling where, when, and why various pitch levels have been used. With a focus on Italy, France, Germany, the Netherlands and the Hapsburg lands, he covers the

pitches of about 1,400 historical instruments and how the design and function influenced and were influenced by changes in pitch. In addition, he studies the effect of pitch differences on musical notation and choice of key. The author has also written a book on the oboe, the instrument that plays the A to which a symphony orchestra tunes. Annotation copyrighted by Book News, Inc., Portland, OR

Experimental Spindle Torque and Open-water Performance of Two Skewed Controllable-pitch Propellers Robert J. Boswell, John J. Nelka, Richard D. Kader, 1975 Experimental results are presented on the spindle torque and open-water performance of two skewed controllable-pitch propellers. Both propellers have radial distributions of skew specified so that the section midchord is forward of the spindle axis at the inner radii and aft of the spindle axis at the outer radii. One propeller has no rake and the other has substantial forward rake. The experiments were conducted at steady conditions in uniform flow in a towing basin over a range of positive and negative pitch ratios and a range of positive and negative advance coefficients so that the complete maneuvering envelope of the ship was simulated in a quasi-steady manner. The experimental open-water performance was correlated with calculated values based on a least-squares fit to previous systematic experimental data.

Tonal Pitch Space Fred Lerdahl, 2004-12-09 Building on the foundation of Lerdahl and Jackendoff's influential *A Generative Theory of Tonal Music*, this volume presents a multidimensional model of diatonic and chromatic spaces that quantifies listeners' intuitions of the relative distances of pitches, chords, and keys from a given tonic. The model is employed to assign prolongational structure, represent paths through the space,

and compute patterns of tension and attraction as musical events unfold, thereby providing a partial basis for understanding musical narration, expectation, and expression. Conceived as both a music-theoretic treatise and a contribution to the cognitive science of music, this book will be of interest to music theorists, musicologists, composers, computer musicians, and cognitive psychologists.

Intervals, Scales, Tones and the Concert Pitch C Maria Renold, 2015 Why is it that certain intervals, scales, and tones sound genuine, while others sound false? Is the modern person able to experience a qualitative difference in a tone's pitch? If so, what are the implications for modern concert pitch and how instruments of fixed tuning are tuned? Renold tackles these and many other questions and provides a wealth of scientific data. Her pioneering work is the result of a lifetime of research into the Classical Greek origin of Western music and the search for modern developments. She deepens our musical understanding by using Rudolf Steiner's spiritual science as a basis, and she elucidates many of his puzzling statements about music. The results of her work include the following discoveries: - The octave has two sizes (a 'genuine' sounding octave is bigger than the perfect octave) - There are three sizes of perfect fifths - An underlying form principle for all scales can be found - Equal temperament is not the most satisfactory method of tuning a piano - She provides a basis for some of Steiner's statements, such as, C is always prime and $C = 128 \text{ Hz} = \text{Sun}$. *Intervals, Scales, Tones* is a valuable resource for those who wish to understand the deeper, spiritual aspects of music.

Pitch Partners #2 Laura D'Asaro,Rose Wang,Heather Alexander,2021-11-09 The second book in the sensational series inspired by the true story of two friends who landed a deal on Shark Tank. Sixth-grade students-turned-entrepreneurs are on a mission to save the world, one bug at a time! After snagging second place at their school's startup pitch competition, Hallie and Jaye are confident that their edible bug business is the food of the future. Now their ultimate goal is to get Chirps chips--tortilla chips made with cricket powder--on every grocery store shelf. First, they get to move on to the county pitch competition to try and win tickets to New York City to compete in the next round. But there are a few bumps along the way, with their cricket supply shrinking, no kitchen to cook in, and trouble brewing between the two teammates. Can they clinch first place, or will their business go bust before it really begins? Based on the true story of a sustainable protein

start-up company, this illustrated novel is a reimagining for a middle-grade reader. Chirps founders Rose Wang and Laura D'Asaro met as freshmen at Harvard University and cooked up the concept of selling chips made with cricket flour to help Americans feel more comfortable eating bugs. Together, Rose and Laura appeared on the TV show Shark Tank to pitch their idea and landed a deal with Mark Cuban. Chirps chips are now sold in stores across the nation.

Beyond the Red Ava Jae, 2016-03-01 Alien queen Kora has a problem as vast as the endless crimson deserts. She's the first female ruler of her territory in generations, but her people are rioting and call for her violent younger twin brother to take the throne. Despite assassination attempts, a mounting uprising of nomadic human rebels, and pressure to find a mate to help her rule, she's determined to protect her people from her brother's would-be tyrannical rule. Eros is a rebel soldier hated by aliens and human alike for being a half-blood. Yet that doesn't stop him from defending his people, at least until Kora's soldiers raze his camp and take him captive. He's given an ultimatum: be an enslaved bodyguard to Kora, or be executed for his true identity—a secret kept even from him. When Kora and Eros are framed for the attempted assassination of her betrothed, they flee. Their only

chance of survival is to turn themselves in to the high court, where revealing Eros's secret could mean a swift public execution. But when they uncover a violent plot to end the human insurgency, they must find a way to work together to prevent genocide.

Pitch Christopher J. Plack, Andrew J. Oxenham, Richard R. Fay, 2006-04-20 Although pitch has been considered an important area of auditory research since the birth of modern acoustics in the 19th century, some of the most significant developments in our understanding of this phenomenon have occurred comparatively recently. In auditory physiology, researchers are now identifying cells in the brainstem and cortex that may be involved in the derivation of pitch. In auditory psychophysics, dramatic developments over the last few years have changed our understanding of temporal pitch mechanisms, and of the roles of resolved and unresolved harmonics. Computational modeling has provided new insights into the biological algorithms that may underlie pitch perception. Modern brain imaging techniques have suggested possible cortical locations for pitch mechanisms. This timely volume brings together the more recent findings, while emphasizing their relation to the discoveries of the past. It brings together insights from several different methodological areas: physiology, psychophysics, comparative, imaging, etc., in addressing a single scientific problem. Pitch perception can be regarded as one of the main problems of hearing, and the multidisciplinary approach of the book provides a valuable reference source for graduate students and academics.
