Planet One Drop Hopeton Gray,2013-02-12 The book is a science fiction and it is about an imaginary world where the new inhabitants can have some fun. The two newly occupied downgraded planets were, Planet One Drop and Planet Rabox. The world was in trouble because of a massive nuclear reactor meltdown just like Chernobyl but it was on a bigger scale, and then much else besides. As a timing of good faith, our planet earth was baled out of their apparent demise by their alliance with the Aliens of planet Rabox. An exchange program was initiated by Planet Rabox which became the building block for all three planets. The Rastronauts and the Untouchable people became the protagonist of this new space age.

A Drop Around the World Barbara Shaw McKinney,1998-03-01 This beautifully illustrated book is soon to be a classic that parents, teachers, and kids will all want! Readers travel the globe following a drop of water on its journey through the water cycle. The seamless blending of science and story make learning fun, and readers will be inspired to appreciate the world around us! Follow a drop of water on its natural voyage around the world, in clouds, as ice and snow, underground, in the sea, piped from a reservoir, in plants and even in an animal. The science of the water cycle and poetic verse come together and leave readers with a sense of connection to all living creatures. Great for anyone looking for books: about the water cycle and clouds for kids. to give as a gift for the kids in their life. as home schooling materials. for use in schools and libraries!

The Drop in My Drink Meredith Hooper,1998 Follows a single drop of water on its journey through millions of years of the earth's history.

Empty Planet Darrell Bricker,John Ibbitson,2019-02-05 From the authors of the bestselling *The Big Shift*, a provocative argument that the global population will soon begin to decline, dramatically reshaping the social, political, and economic landscape. For half a century, statisticians, pundits, and politicians have warned that a burgeoning planetary population will soon overwhelm the earth's resources. But a growing number of experts are sounding a different kind of alarm. Rather than growing exponentially, they argue, the global population is headed for a steep decline. Throughout history, depopulation was the product of catastrophe: ice ages, plagues, the collapse of civilizations. This time, however, we're thinning ourselves deliberately, by choosing to have fewer babies than we need to replace ourselves. In much of the developed and developing world, that decline is already underway, as urbanization, women's empowerment, and waning religiosity lead to smaller and smaller families. In *Empty Planet*, Ibbitson and Bricker travel from South Florida to Sao Paulo, Seoul to Nairobi, Brussels to Delhi to Beijing, drawing on a wealth of research and firsthand reporting to illustrate the dramatic consequences of this population decline--and to show us why the rest of the developing world will soon join in. They find that a smaller global population will bring with it a number of benefits: fewer workers will command higher wages; good jobs will prompt innovation; the environment will improve; the risk of famine will wane; and falling birthrates in the developing world will bring greater affluence and autonomy for women. But enormous disruption lies ahead, too. We can already see the effects in Europe and parts of Asia, as aging populations and worker shortages weaken the economy and impose crippling demands on healthcare and social security. The United States is well-positioned to successfully navigate these coming demographic shifts--that is, unless growing isolationism and anti-immigrant backlash lead us to close ourselves off just as openness becomes more critical to our survival than ever before. Rigorously researched and deeply compelling, *Empty Planet* offers a vision of a future that we can no longer prevent--but one that we can shape, if we choose.

Ad Astra: An Illustrated Guide to Leaving the Planet Dallas Campbell,2017-10-05 'I could have done with a copy of *Ad Astra* in December 2015!' –Tim Peake 'A wonderful, wise and witty guide for space explorers everywhere.' – Richard Osman 'A must read both for intrepid space explorers and misty-eyed dreamers. Now, to space!' – Hannah Fry 'Few people are more knowledgeable, celebratory and witty about space travel than Dallas Campbell.' – Adam Rutherford Need some space? For almost all human history we've been firmly rooted to the Earth. And, sure, it's got some good things going for it: nice views, friendly inhabitants, good coffee. Air. But what if you want to get off? Whether you've got itchy feet and need a bit of a break, or you're looking for a complete change of scene, this book has all the information you'll need to leave, with FREE expert advice from the men and woman who can actually make it happen. Do I need a passport? How do I know if I have the right stuff? Can I take my dog? What spacesuit do I need? Where am I going to go? What am I going to eat? As well as being a deeply impractical guide to getting off the planet, this is an eclectic and beautifully illustrated mix-tape of space travel stories – both real and imagined. From the migrating lunar geese that flew us to the moon in the 1600's, to Elon Musk's wild plan

to get humans to Mars en masse in the future; from the history of early rocket science to the Soviet tortoises that secretly won the space race. A collection for anyone who has looked up in wonder at the stars... And then wondered how to get there. 'The next best thing to actually heading off into space.' – Jim Al-Khalili 'Few people are more knowledgeable, celebratory and witty about space travel than Dallas Campbell.' – Adam Rutherford 'If, like me, you dream of going into space, this is definitely the place to start the journey.' – Dan Snow 'A must have volume for astronauts and armchair astronauts alike.' – Helen Sharman OBE 'Funny, factual and beautiful.' – Shaun Keavney 'Read it, make notes, and be ready when the day comes.' – Helen Czerski

The Planet Factory Elizabeth Tasker,2017-09-07 Forget about rockets to Mars – the future of space science lies with the search for exoplanets Twenty years ago, the search for planets outside the Solar System was the preserve of science-fiction writers. Now it's one of the fastest-growing fields in astronomy, with thousands of exoplanets discovered to date, and the number rising fast. These new-found worlds are more alien than anything in fiction. Planets larger than Jupiter with years lasting a week; others with two suns lighting their skies, or with no sun at all. Planets with diamond mantles supporting oceans of tar; possible Earth-sized worlds with split hemispheres of perpetual day and night; waterworlds drowning under global oceans and volcanic lava planets awash with seas of magma. The discovery of this diversity is just the beginning. There is a whole galaxy of possibilities. The Planet Factory tells the story of these exoplanets. What can we learn about these faraway surface environments and planetary atmospheres? And do the results hint at the tantalising possibility of alien life?

Planet Earth, Past and Present Michael Carroll,2023-11-19 The Earth is not the world it once was, and it is not the world it will always be. This book describes the exciting, complex, and occasionally baffling history of our own planet. Over the course of its 4.5 billion years, Earth has undergone astonishing changes to its surface and atmosphere, at times more closely resembling other planets in our Solar System than the habitable, teeming biosphere of today. Through these otherworldly analogs, author-illustrator Michael Carroll teaches readers about different aspects of our own planet's past. Our nearest cosmic neighbor, Venus, offers insights into Earth's own young atmosphere and surface, while Saturn's moon Titan may offer a window into the genesis of life on Earth. Planet Earth, Past and Present explores these and many more connections. Original art accompanies each chapter, depicting major stages of the Earth's evolution and providing vivid comparisons to other planets or moons. Come along on this journey through the Solar System—a journey that ultimately leads us home.
