Themes in Motor Development H.T.A Whiting,M.G. Wade,2012-12-06 This book is divided into Sections. Each Section is devoted to a particular theme in Motor Development and comprises two or more contributions. The order of presentation is largely fortuitous and does not reflect any value judgement on the part of the editors as to the importance of anyone theme in comparison to others addressed' in the book. This volume is to be seen as a companion volume to 'Motor Development in Children: Aspects of coordination and control' in which the more general issues in motor development presented during the Institute are published. Together, the two volumes provide both a general and a theme specific approach to this expanding field of knowledge. XI PREFACE Books and conferences, on what in North America is euphemistically termed motor development, have been few and far between in the past 25 years. This is not to say that the study of how children acquire and develop motor skills has not been a subject on which scientists have focused their attention. In the United States in the 1930's and 1940's, Bayley (1935) and Gesell and Amatruda (1947) described and scaled the rates at which young children acquired motor skills. In Europe, the development of childrens' motor behaviour was of theoretical interest to Piaget (1952).

Creating Content Management Systems in Java Arron Ferguson,2007 In today's fast-paced, information-packed world, it's critical for businesses to organize and manipulate the data gathered from customers, sales, and product responses, etc. into usable information. Content Management Systems (CMS) can do this for your business easily and efficiently. There are several commercial systems available, but customizing one for your specific needs is usually necessary based on your data. Creating Content Management Systems in Java teaches you how to develop an open source CMS from scratch using XML as the storage mechanism, XSLT as the presentation layer, and Java and JSPs & Servlets to realize the multi-tiered architecture. The book also covers data modeling in XML and the use of XSLT as a presentation vehicle for custom XML formats. Creating Content Management Systems in Java is written for Web and software developers (specifically Java developers) who wish to learn more about the field of content management. The book provides a practical, applied perspective with complete demonstrations using code to show you how a solution or feature can be implemented. Throughout the book you will work through the development of a complete, open source, working CMS example, beginning with the conceptual ideas of content management. From there you'll dive into the exploration of practical design solutions, and then move into the final implementations in each tier of the software that becomes the CMS. To benefit the most from this book, you should already know the Java programming language and have a basic understanding of the Web. You do not need to know XML, XSLT, CSS, or XHTML because these topics are covered thoroughly, although a basic understanding will be helpful. So, if you need to learn more about CMS development, this is the book for you.

Participatory Design Douglas Schuler,Aki Namioka,1993-03-01 The voices in this collection are primarily those of researchers and developers concerned with bringing knowledge of technological possibilities to bear on informed and effective system design. Their efforts are distinguished from many previous writings on system development by their central and abiding reliance on direct and continuous interaction with those who are the ultimate arbiters of system adequacy; namely, those who will use the technology in their everyday lives and work. A key issue throughout is the question of who does what to whom: whose interests are at stake, who initiates action and for what reason, who defines the problem and who decides that there is one. The papers presented follow in the footsteps of a small but growing international community of scholars and practitioners of participatory systems design. Many of the original European perspectives are represented here as well as some new and distinctively American approaches. The collection is characterized by a rich and diverse set of perspectives and experiences that, despite their differences, share a distinctive spirit and direction

-- a more humane, creative, and effective relationship between those involved in technology's design and use, and between technology and the human activities that motivate the technology.

Multimodality Studies in International Contexts Liliana Vásquez Rocca, Natasha Artemeva, Chloë Grace Fogarty-Bourget, 2023-12-28 This collection responds to the need for theoretically informed and methodologically grounded empirical research on the global transformations in multimodal human communication and social practices in light of recent widespread change. The volume highlights the need to expand on the established approaches--Social Semiotics, Multimodal Discourse Analysis, and Multimodal (Inter)action Analysis--by complementing them with other analytical frameworks to better understand the impact of unprecedented global challenges, such as Covid-19, on the way humans communicate and make use of meaning-making resources. Bringing together established and emergent scholars from a variety of geographical, cultural, and linguistic contexts, the collection presents studies from both the Global North and Global South, including South Africa, Latin America, Brazil, and the Caribbean, to showcase new perspectives in multimodality research. This innovative book will be of interest to students and scholars in multimodality, social semiotics, and discourse analysis.

Icons of the American West [2 volumes] Gordon Morris Bakken, 2008-06-30 The American West is rich in lore, cultural roots, and iconic images. The subject of countless movies, books, and songs, in many ways it embodies the American spirit. This lively two-volume set presents the stories of some of the most influential and representative Western icons—those that have captured the nation's imagination since the early days of westward exploration and that continue to do so within the environmental and technological frontier that is the modern West. This accessible treatment of the untamed enterprise of the 'Old West'—including cowboys, wild west shows, and gun battles—and the continued entrepreneurial imagination of the paradisaical 'New West'—including environmentalists and the incorporation of national parks—elevates the reader's understanding of oft-romanticized subjects and the conflicts and cultural changes that made them icons. Narrative entries include: ; Chief Joseph ; George Armstrong Custer ; Gold Rush ; Winchester Model 1873 ; Frederic Remington ; John Muir ; Las Vegas ; Bill Gates ; Disneyland ; Yellowstone National Park ; Sierra Club With vibrant photos and descriptive sidebars, this comprehensive set is a must-have for students of American history and culture.

Plastic Emotions Shiromi Pinto, 2019-07-20 *Plastic Emotions* is inspired by the life of Minnette de Silva—a forgotten feminist icon and one of the most important figures of twentieth-century architecture. In a gripping and lyrical story, Shiromi Pinto paints a complex picture of de Silva, charting her affair with the infamous Swiss modernist Le Corbusier and her efforts to build an independent Sri Lanka that slowly heads towards political and social turmoil. Moving between London, Chandigarh, Colombo, Paris and Kandy, *Plastic Emotions* explores the life of a young, trailblazing South Asian woman at a time of great turbulence across the globe.

Mikhail Larionov and the Cultural Politics of Late Imperial Russia Sarah Warren, 2017-07-05 In the turbulent atmosphere of early twentieth-century Tsarist Russia, avant-garde artists took advantage of a newly pluralistic culture in order to challenge orthodoxies of form as well as social prohibitions. Very few did this as effectively, or to as broad an audience, as Mikhail Larionov. This groundbreaking study examines the complete range of his work (painting, book illustration, performance, and curatorial work), and demonstrates that Larionov was taking part in a broader cultural conversation that arose out of fundamental challenges to autocratic rule. Sarah Warren brings the culture of late Imperial Russia out of obscurity, highlighting Larionov's specific interventions into conversations about nationality and empire, democracy and autocracy, and people and intelligentsia that colonized all areas of cultural production. Rather than analyzing Larionov's works within the same interpretive

frameworks as those of his contemporaries in France or Germany-such as Matisse or Kirchner-Warren explores the Russian's negotiations with both nationalism and modernism. Further, this study shows that Larionov's group exhibitions, public debates, and face-painting performances were more than a derivative repetition of the techniques of the Italian Futurists. Rather, these activities were the culmination of his attempt to create a radical primitivism, one that exploited the widespread Russian desire for an authentic collective identity, while resisting imperial efforts to appropriate this revivalism to its own ends.

Apocalyptic Thought in Early Christianity Robert J. Daly, 2009-06 This new addition to the Holy Cross Studies in Patristic Theology and History series explores early Christian views on apocalyptic themes.

Beyond Recycling Paul Micklethwaite, 2021-05-27 Beyond Recycling critically explores unasked questions around recycling and its prominent position in contemporary thinking about sustainability. It examines and challenges assumptions about why we appear to have so wholeheartedly committed to recycling as a cultural project. Recycling has become a commonplace notion and widespread practice. Yet its social, cultural and even environmental value has not been considered carefully enough. This book considers recycling as a contemporary cultural idea related to – but not wholly defined by – our response to material waste. It seeks to reclaim recycling from the environmentalists and waste management specialists, to explore the role it plays in wider contemporary discourse. As we become increasingly satiated, and in many cases sickened, by the excesses of modern consumerism, we are rethinking our relationship with the physical stuff that fills our lives. Dissatisfied with empty materialism, we seek new ways to reuse our material culture. Recycling, turning something considered to be waste into something with renewed value, is our primary collective response to the problems arising from consumption; and it is ripe for critical examination. Beyond Recycling is a fascinating read for conscious consumers and students in the creative arts, design, cultural studies, sustainability and environmental studies.

Designing Disney's Theme Parks Centre canadien d'architecture, 1997 From the day it opened in July 1955, in an event given live TV coverage, Disneyland has been a key symbol of contemporary American culture. It has been both celebrated and attacked as the ultimate embodiment of consumer society, a harbinger of shopping-mall culture, a symbol of American hegemony in entertainment, the epitome of fantasy, simulation, pastiche, and the blurring of distinctions between reality and mass-media imagery. Yet for all the power of Disneyland as metaphor, almost no one has discussed the making of this unique place, with its far-flung colonies in Florida, Japan, and France. Written to accompany an exhibition at the Canadian Centre for Architecture in Montreal, *Designing Disney's Theme Parks: The Architecture of Reassurance* is the first book to look beyond the multiple myths of Disneyland. Uniting a roster of authors chosen from wide-ranging disciplines, this study is the first to examine the influence of Disneyland on both our built environment and our architectural imagination. Tracing the relationship of the Disney parks to their historical forbears, it charts Disneyland's evolution from one man's personal dream to a multinational enterprise, a process in which the Disney magic has moved ever closer to the real world. Editor Karal Ann Marling, Professor of Art History and American Studies at the University of Minnesota, draws upon her pioneering work in the Disney archives to reconstruct and analyze the intentions and strategies behind the parks. She is joined by Marty Sklar, Vice Chairman and Principal Creative Executive of Walt Disney Imagineering, historian Neil Harris, art historian Erika Doss, geographer Yi-Fu Tuan, critic Greil Marcus, and architect Frank Gehry to provide a unique perspective on one of the great post-war American icons.

Provocative Plastics Susan Lambert, 2021-01-07 Plastics have now been our most used materials for over fifty years. This book adopts a new approach, exploring plastics' contribution from two perspectives: as a medium for making and their value in societal use. The first approach examines the multivalent nature of plastics materiality and their impact on creativity through the work of artists, designers and manufacturers. The second perspective explores attitudes to plastics and the different value systems applied to them through current research undertaken by design, materials and socio-

cultural historians. The book addresses the environmental impact of plastics and elucidates the ways in which they can and must be part of the solution. The individual viewpoints are provocative and controversial but together they present a balanced and scholarly un-picking of the debate that surrounds this ubiquitous group of materials. The book is essential reading for a wide academic readership interested in the Arts and Humanities, especially Design and Design History; Anthropology; and Cultural, Material and Social Histories.

Identities for Life and Death Robert J. Pellegrini, 2010-09 This book is all about stories. The stories that shape our identities and how those identities shape our destinies for better or worse, for good or evil, in humanizing or dehumanizing ways. Working from the Shakespearian metaphor, All the world s a stage and all the men and women merely players, Pellegrini argues that only by understanding how our storied selves develop can we acquire the tools to modify the roles they dictate for us to play on the stage in the theater of real life. The author deconstructs a wide variety of what he calls toxic, dehumanizing, death-oriented self-scripts as well as creative, humanizing, life-oriented narratives of groups as well as individuals. Following the Native American parable of two wolves engaged in mortal combat within us, one good the other evil, the fundamental premise here is that our identity determines which of our inner wolves we feed and thus, which of them will prevail. Pellegrini maintains that what s at stake in this battle between humanity s collective inner wolves, is not just the quality but the very survival of life on earth. From this perspective, as individual and group selves are humanizingly or dehumanizingly narratized by the way we exercise our God-given free will in the choices we make, so shall life be impacted throughout the world. To advance the cause of detoxifying identities in our global society, the author presents a rationale and program for an international grass roots social movement aimed at achieving a universal sense of belongingness to a global life system. You can watch and listen to a video in which Dr. Bob Pellegrini talks about this book, and why he wrote it, by entering *Identities for Life and Death* in the search bar at [youtube.com](https://www.youtube.com).]

To begin with, an icon generates strong responses in people, it often stands for a group of values (John Wayne), it reflects forces of its time, it can be reshaped or extended by imitation, and it often breaks down barriers between various segments of American culture, such as those that exist between white and black America, or between high and low art.
