Camera Geologica Siobhan Angus, 2024-02-16 In *Camera Geologica* Siobhan Angus tells the history of photography through the minerals upon which the medium depends. Challenging the emphasis on immateriality in discourses on photography, Angus focuses on the inextricable links between image-making and resource extraction, revealing how the mining of bitumen, silver, platinum, iron, uranium, and rare earth elements is a precondition of photography. Photography, Angus contends, begins underground and, in photographs of mines and mining, frequently returns there. Through a materials-driven analysis of visual culture, she illustrates histories of colonization, labor, and environmental degradation to expose the ways in which photography is enmeshed within and enables global extractive capitalism. Angus places nineteenth-century photography in dialogue with digital photography and its own entangled economies of extraction, demonstrating the importance of

understanding photography's complicity in the economic, geopolitical, and social systems that order the world.

Inner Sound Jonathan Weinel, 2018-02-01 Over the last century, developments in electronic music and art have enabled new possibilities for creating audio and audio-visual artworks. With this new potential has come the possibility for representing subjective internal conscious states, such as the experience of hallucinations, using digital technology. Combined with immersive technologies such as virtual reality goggles and high-quality loudspeakers, the potential for accurate simulations of conscious encounters such as Altered States of Consciousness (ASCs) is rapidly advancing. In *Inner Sound*, author Jonathan Weinel traverses the creative influence of ASCs, from Amazonian chicha festivals to the synaesthetic assaults of neon raves; and from an immersive outdoor electroacoustic performance on an Athenian hilltop to a mushroom trip on a tropical island in virtual reality. Beginning with a discussion of consciousness, the book explores how our subjective realities may change during states of dream, psychedelic experience, meditation, and trance. Taking a broad view across a wide range of genres, *Inner Sound* draws connections between shamanic art and music, and the modern technoshamanism of psychedelic rock, electronic dance music, and electroacoustic music. Going

beyond the sonic into the visual, the book also examines the role of altered states in film, visual music, VJ performances, interactive video games, and virtual reality applications. Through the analysis of these examples, Weinel uncovers common mechanisms, and ultimately proposes a conceptual model for Altered States of Consciousness Simulations (ASCs). This theoretical model describes how sound can be used to simulate various subjective states of consciousness from a first-person perspective, in an interactive context. Throughout the book, the ethical issues regarding altered states of consciousness in electronic music and audio-visual media are also examined, ultimately allowing the reader not only to consider the design of ASCs, but also the implications of their use for digital society.

The Music of Counterculture Cinema Mathew J. Bartkowiak, Yuya Kiuchi, 2015-06-14 Films produced in late 1960s and early 1970s America--along with later films focusing on that period--continue to frame our understanding of the counterculture era. The popular and experimental music of the day is central to the counterculture narrative on film, from the utopian Monterey Pop (1968) to the disenchantment of Gimme Shelter (1970). But the musical side of the movement was not monolithic, and a study of contemporary film soundtracks reveals a great deal of complexity. The coinciding struggles to define collective and individual identities based on race, class, gender and generation are well documented in the music of counterculture cinema.
