In Search of the Rain Forest Candace Slater,2004-03-22 The essays collected here offer important new reflections on the multiple images of and rhetoric surrounding the rain forest. The slogan “Save the Rain Forest!”—emblazoned on glossy posters of tall trees wreathed in vines and studded with monkeys and parrots—promotes the popular image of a marvelously wild and vulnerable rain forest. Although representations like these have fueled laudable rescue efforts, in many ways they have done more harm than good, as these essays show. Such icons tend to conceal both the biological variety of rain forests and the diversity of their human inhabitants. They also frequently obscure the specific local and global interactions that are as much a part of today’s rain forests as are the array of plants and animals. In attending to these complexities, this volume focuses on specific portrayals of rain forests and the consequences of these characterizations for both forest inhabitants and outsiders. From diverse disciplines—history, archaeology, sociology, literature, law, and cultural anthropology—the contributors provide case studies from Latin America, Asia, and Africa. They point the way toward a search for a rain forest that is both a natural entity and a social history, an inhabited place and a shifting set of ideas. The essayists demonstrate how the single image of a wild and yet fragile forest became fixed in the popular mind in the late twentieth century, thereby influencing the policies of corporations, environmental groups, and governments. Such simplistic conceptions, *In Search of the Rain Forest* shows, might lead companies to tout their “green” technologies even as they try to downplay the dissenting voices of native populations. Or they might cause a government to create a tiger reserve that displaces peaceful peasants while opening the doors to poachers and bandits. By encouraging a nuanced understanding of distinctive, constantly evolving forests with different social and natural histories, this volume provides an important impetus for protection efforts that take into account the rain forest in all of its complexity. Climate Change and Human Security Michael R. Redclift,David Manuel Navarrete,Mark Pelling,2011-07 The challenge presented by climate change is, by its nature, global. The populations of the Mexican Caribbean, the focus of this book, are faced by everyday decisions not unlike those in the urban North. The difference is that for the people of the Mexican Caribbean evidence of the effects of climate change, including hurricanes, is very familiar to them. This important study documents the choices and risks of people who are powerless to change the economic development model which is itself forcing climate change. The book examines the Mexican Caribbean coast and explores the wider issues of managing climate change in vulnerable areas of the tropics. It also points to the inability to integrate development thinking into climate change adaptation. The authors suggest that failures in local governance - the transparency of state actions and the local populations lack of effective power - represents a greater threat to adaptation than the absence of technical capacity in vulnerable areas. Using local case studies of communities, fishing villages and tourist destinations, this well-researched book will appeal to international students and academics working on climate change and professionals in development, conservation and tourism industries.
