Fundamentals of Software Engineering Farhad Arbab, Marjan Sirjani, 2013-08-30 This book constitutes the proceedings of the 5th IPM International Conference on Fundamentals of Software Engineering, FSEN 2013, held in Tehran, Iran, in April 2013. The 17 full papers presented in this volume were carefully reviewed and selected from 65 submissions. The topics of interest in FSEN span over all aspects of formal methods, especially those related to advancing the application of formal methods in software industry and promoting their integration with practical engineering techniques.

**Estonia Life Stories** Tiina Kirss,Rutt Hinrikus,2009-01-01 After a short period of independence, Estonia was occupied in World War II by the Red Army, then Nazi Germany, and again, for a lasting occupation, by the Soviets. No wonder that a greater part of the roughly one million Estonians had harshly eventful lives. This anthology contains 25 selected life stories collected from Estonians who lived through the tribulations of the 20th century, and describe the travails of ordinary people under numerous regimes. The autobiographical accounts provide authentic perspectives on events of this period, where time is placed in the context of life-spans, and subjects grounded in personal experience. Most of the life stories reveal sufferings under foreign (Russian) oppression. The product of a large-scale national project to record history by collecting autobiographical accounts, and a process of engaged selection for publication which followed. The variety of life-experiences recorded offers comparison across cultures, as well as an overview of the powerful neighbors as they relinguish

and strengthen their hold on Estonia.

Lessons from Estonia's Education Success Story Peeter Mehisto, Maie Kitsing, 2022-07-19 This book explores how Estonia, despite high levels of poverty, has transformed its education system to become Europe's top performer on PISA (Programme for International Student Assessment). The engaging narrative uncovers reforms, mistakes and lessons learnt that have been harnessed to create a high-performing, high-equity education system, which includes social and education policies fostering equity, inclusion, learner autonomy, as well as schoolteacher and principal professionalism, autonomy and responsibility. It unearths how easy access to a wide range of data such as perceptions of well-being, autonomy and connectedness, in addition to examination results, builds internal and external accountability, and contributes to collective stakeholder efficacy. Grounded in research from Estonia and beyond, this is an ideal read for educators, administrators, academics, university students, change agents and parents interested in school system improvement. As equity, equality and inclusion are core drivers of the Estonian education system, this book would also be of interest to those working in social justice, inclusion and diversity.

The Russian Second Generation in Tallinn and Kohtla-Järve Raivo Vetik, Jelena Helemäe, 2011 Second-generation Russians face two major integration challenges in the Estonian cities of Tallinn and Kohtla-J©Prve. They are segregated from an Estonian language society whose historical background lies in the policies and social processes of the former Soviet Union. And, compared to their peers, they face an emerging disparity in social and economic opportunities. Such inequality comes largely as the result of newly formed, post-independence institutions, which incite

protest among young Russians. With a potential to escalate into large-scale conflict, as exemplified by the Bronze Soldier cr.

Energy Law and Economics Klaus Mathis, Bruce R. Huber, 2018-04-19 This book offers an edited volume for all readers who wish to gain an in-depth grasp of the economic analysis of recent developments in energy law and policy in Europe and the United States. In response to waning resources and heightened environmental awareness, many countries are now seeking to redefine their energy mix. Several energy sources are available: coal and oil, natural gas, and a variety of renewables. Yet which of them are capable of addressing core energy-related concerns? Reliability, security, affordability, fairness, and sustainability all have to be taken into account. Further, once a target mix has been identified, two challenges remain for legal scholars: what role does the law play in achieving a specified energy mix, and, how can the law best fulfill that role? The essential energy concerns are just as important in defining the way we shape our energy mix as they are in defining the mix itself. An example of current challenges in energy law and policy can be seen in the pursuit by the German and Swiss governments of the so-called "Energiewende" (energy transition). These policies are intended to enable the transition from a non-sustainable use of fossil and nuclear energy to a more sustainable approach based on renewable energies. On the one hand, the goal is to achieve a decarbonization of the energy economy by reducing the use of fossil energy sources such as petroleum, carbon and natural gas. On the other, and in response to the Fukushima nuclear accident, a phase out is intended to eliminate the dangers of nuclear technologies. Achieving these goals poses tremendous challenges for the two countries' energy policies - partly because the energy transition will not only affect energy production, but also energy consumption. From a Law and Economics perspective, a number of questions arise: to what extent is it justifiable to rely on markets and

continued technological innovation, especially with regard to the present exploitation of scarce resources? To what extent is it necessary for states to intervene in energy markets? Regulatory instruments are available to create and maintain more sustainable societies: command and control regulations, restraints, Pigovian taxes, emission certificates, nudging policies, and more. If regulation in a certain legal field is necessary, which policies and methods will most effectively spur the sustainable consumption and production of energy in order to protect the environment while mitigating any potential negative impacts on economic development? Do neoclassical and behavioural economics provide us with a suitable framework for predicting the market's complex reactions to a changing energy policy? This book provides theoretical insights as well as empirical findings in order to answer these vital questions.

Plug In Electric Vehicles in Smart Grids Sumedha Rajakaruna, Farhad Shahnia, Arindam Ghosh, 2014-11-29 This book focuses on the state of the art in worldwide research on applying optimization approaches to intelligently control charging and discharging of batteries of Plug-in Electric Vehicles (PEVs) in smart grids. Network constraints, cost considerations, the number and penetration level of PEVs, utilization of PEVs by their owners, ancillary services, load forecasting, risk analysis, etc. are all different criteria considered by the researchers in developing mathematical based equations which represent the presence of PEVs in electric networks. Different objective functions can be defined and different optimization methods can be utilized to coordinate the performance of PEVs in smart grids. This book will be an excellent resource for anyone interested in grasping the current state of applying different optimization techniques and approaches that can manage the presence of PEVs in smart grids.

Consuls in the Cold War ,2023-05-08 No studies currently exist on consuls and consulates (often dismissed as lowly figures in the diplomatic process) in the Cold War. Research into the work of these overlooked 'poor relations' offers the chance of new perspectives in the field of Cold War studies, exploring their role in representing their country's interests in far flung and unexpected places and their support for particular communities of fellow nationals and itinerant travellers in difficulties. These unnoticed actors on the international stage played far more complicated roles than one generally imagines. . Contributors are: Tina Tamman, David Schriffl, Ariane Knuesel , Lori Maguire, Laurent Cesari, Sue Onslow, Pedro Aires Oliveira, David Lee, and Marek Hańderek.

<u>Software Business</u> Krzysztof Wnuk, Sjaak Brinkkemper, 2018-12-06 This book constitutes the refereed proceedings of the 9th International Conference on Software Business, ICSOB 2018, held in Tallinn, Estonia, in June 2018. This year the conference theme was "How Digitalization Impacts Software Business" and focused on digitalization and its impact on the speed of business models and business modeling and the realization of these business models. The 11 full papers and 1 short paper presented in this volume were carefully reviewed and selected from 34 submissions. They were organized in topical sections named: software ecosystems; software product management and business models; and software start-ups.

Open and Social Technologies for Networked Learning Tobias Ley, Mikko Ruohonen, Mart Laanpere, Arthur Tatnall, 2013-04-18 This volume constitutes the refereed post-proceedings of the IFIP WG 3.4 International Conference on Open and Social Technologies for Networked Learning, OST 2012, held in Tallinn, Estonia, in July/August 2012. The 16 full papers presented together with 3 short papers and 5 doctoral student papers were thoroughly reviewed and selected from numerous submissions.

The papers cover a wide range of topics such as mobile learning, social networks, analytics and recommendations, workplace learning, learning analytics in higher education, collaborative learning in higher education, and managing open and social education.

**Fundamental Approaches to Software Engineering** Juan de Lara, Andrea Zisman, 2012-03-09 This book constitutes the refereed proceedings of the 4th International Conference on Fundamental Approaches to Software Engineering, FASE 2001, held in Genova, Italy in April 2001. The 22 revised full papers presented were carefully reviewed and selected from a total of 74 submissions. The papers are organized in topical sections on metamodeling, distributed components, UML, testing, formal methods, and case studies.

Environmental Software Systems. Infrastructures, Services and Applications Ralf Denzer, Robert M. Argent, Gerald Schimak, Jiří Hřebíček, 2015-02-09 This book constitutes the refereed proceedings of the 11th IFIP WG 5.11 International Symposium on Environmental Software Systems, ISESS 2015, held in Melbourne, Australia, in March 2015. The 62 revised full papers presented were carefully reviewed and selected from 104 submissions. The papers are organized in the following topical sections: information systems, information modeling and semantics; decision support tools and systems; modelling and simulation systems; architectures, infrastructures, platforms and services; requirements, software engineering and software tools; analytics and visualization; and high-performance computing and big data.

Synergies and trade-offs between carbon footprint and other environmental impacts of buildings Sankelo, Paula, Alhola, Katriina, Chartrand, Émilie, Borg, Alexander, Andresen, Inger, Lylykangas, Kimmo, Aljas, Hans-Kristjan, Kertsmik, Kadri-Ann, 2022-09-15 Available online: https://pub.norden.org/temanord2022-551/ Low-carbon and circular public procurement aims at

reducing climate emissions, promoting value retention, closed material loops and savings in resource use. In the construction and renovation of buildings, attention is paid to the planning phase as well as minimizing material and demolition waste and recycling waste appropriately. In the construction of road infrastructure, significant savings in material and money could be achieved by utilizing secondary materials from the site or nearby. This study examined and illustrated the approaches of low-carbon and circular construction and their synergies and trade-offs. Emissions and potential emission savings were calculated in three case studies representing different aspects of circular construction.

Creating Heritage for Tourism Catherine Palmer, Jacqueline Tivers, 2018-07-27 What does 'heritage' mean in the twenty-first century? Traditional ideas of heritage involve places where objects, landscapes, people and ideas are venerated and reproduced over time as an inheritance for future generations. To speak of heritage is to speak of a relationship between the past, the present and the future. However, it is a past recreated for economic gain, hence sectors such as culinary tourism, ecotourism, cultural tourism and film tourism have employed the heritage label to attract visitors. This interdisciplinary book furthers understanding on how heritage is socially constructed, interpreted and experienced within different geographic and cultural contexts, in both Western and non-Western settings. Subjects discussed include Welsh linguistic heritage, tango, mushroom tourism, Turkish coffee, literary tourism and the techniques employed to construct tourist accommodation. By focusing

upon heritage creation in the context of tourism, the book moves beyond traditional debates about 'authentic heritage' to focus on how something becomes heritage for use in the present. This timely volume will be of interest to students and researchers in tourism, heritage studies, geography, museum studies and cultural studies.
