The Global Rise of the Modern Plug-In Electric Vehicle John D.

Graham, 2021-04-30 We may be standing on the precipice of a revolution in propulsion not seen since the internal combustion engine replaced the horse and buggy. The anticipated proliferation of electric cars will influence the daily lives of motorists, the economies of different countries and regions, urban air quality and global climate change. If you want to understand how quickly the transition is likely to occur, and the factors that will influence the predictions of the pace of the transition, this book will be an illuminating read.

Transplant Production in the 21st Century Chieri Kubota, Changhoo Chun, 2013-11-11 We are facing global issues concerning environmental pollution and shortages of food, feed, phytomass (plant biomass) and natural resources, which will become more serious in the forthcoming decades. To solve these issues, immeasurable numbers of various plants and huge amounts of phytomass are required every year for food, feed and for the improvement of amenities, the environment and our quality of life. Increased phytomass is also required as alternative raw material for producing bio-energy, biodegradable plastics and many other plant-originated industrial products. Only by using phytomass as a reproducible energy source and raw material, instead of fossil fuels and atomic power, we can save natural resources and minimize environmental pollution. To increase phytomass globally, we need

billions of quality transplants (small plants) to be grown yearly, in the field or in the greenhouse, under various environmental conditions. However, these high quality transplants can be produced only under carefully controlled, rather than variable environmental conditions. Recent research has shown that the closed transplant production system requires considerably small amounts of electricity, water, fertilizer, CO₂ and pesticide to produce value-added transplants as scheduled with minimum release of environmental pollutants and minimum loss of transplants. The closed or closed-type transplant production system is defined as a transplant production system covered with opaque walls with minimized or controlled ventilation rates, using artificial lighting. With this system, photoperiod, light intensity and quality, air temperature, humidity, CO₂ concentration and air current speed can be controlled as desired.

Plug-in Hybrid Electric Vehicle (PHEV) Joeri Van Mierlo, 2019-08-27 Climate change, urban air quality, and dependency on crude oil are important societal challenges. In the transportation sector especially, clean and energy efficient technologies must be developed. Electric vehicles (EVs) and plug-in hybrid electric vehicles (PHEVs) have gained a growing interest in the vehicle industry. Nowadays, the commercialization of EVs and PHEVs has been possible in different applications (i.e., light duty, medium duty, and heavy duty vehicles) thanks to the advances in energy storage systems, power electronics converters (including DC/DC converters, DC/AC inverters, and

battery charging systems), electric machines, and energy efficient power flow control strategies. This book is based on the Special Issue of the journal Applied Sciences on “Plug-In Hybrid Electric Vehicles (PHEVs)”. This collection of research articles includes topics such as novel propulsion systems, emerging power electronics and their control algorithms, emerging electric machines and control techniques, energy storage systems, including BMS, and efficient energy management strategies for hybrid propulsion, vehicle-to-grid (V2G), vehicle-to-home (V2H), grid-to-vehicle (G2V) technologies, and wireless power transfer (WPT) systems.

The North Korean Conundrum Robert R. King,Gi-Wook Shin,2022-04 North Korea is consistently identified as one of the world's worst human rights abusers. However, the issue of human rights in North Korea is a complex one, intertwined with issues like life in the North Korean police state, inter-Korean relations, denuclearization, access to information in the North, and international cooperation, to name a few. There are likewise multiple actors involved, including the two Korean governments, the United States, the United Nations, South Korea NGOs, and global human rights organizations. While North Korea's nuclear weapons and the security threat it poses have occupied the center stage and eclipsed other issues in recent years, human rights remain important to U.S. policy. The contributors to *The North Korean Conundrum* explore how dealing with the issue of human rights is shaped and affected by the political issues with which it is so entwined. Sections discuss the role of the United Nations; how North Koreans' limited access to information is part of the problem, and how this is changing; the relationship between human rights and denuclearization; and North Korean human rights in comparative perspective.

The Wall Plug Boys Peter Sandor,2019-09-27 In 1978 America is still licking

its wounds from the Vietnam War, an impeached president and skyrocketing oil prices. The people of the country are suspicious, questioning their government at every turn, and it's an environment allowing conspiracy theories to flourish. It shouldn't be a surprise one of these theories parallels a long-standing enigma we typically laugh at when we see it – and we see it all too often. Specifically, we look in wonder at the people who not only have a complete ineptitude when using power tools, but we also fear for their lives when they do so. Ironically, we cringe and laugh, wondering if these people are from some other planet. Well, the answer is – they are. This is the scenario Jack Decker's three high school friends are obsessed with when he returns to his home town after years away. When Jack appeases his friends and joins in, he does not realize the unexpected path will unearth mysteries within the Amish community, expose industrial espionage and even reveal corruption from the state governor! Middle America comedy, best friends conspiracy theory, middle America quest, adult sleuth quest adventure, hobo comedy, young sleuth coming of age, young sleuth investigation

Point in Time Young Writers Awards 2011,2011

Korean Science and Technology in an International Perspective Jörg Mahlich, Werner Pascha, 2012-01-04 South Korea has attained spectacular economic success in recent decades. It has reached the status of a Newly Advanced Economy, with challenges increasingly mirroring those faced by other advanced economies. These include the necessary upgrading of the labor force, the frictions of switching to a national system of innovation adapted to leadership in R&D, market-based economic policies that reflect the government's difficulties in foreseeing future technological developments, and the consequences of social change for the innovation system and policy-making. In the forthcoming book the parallel challenges for innovation and technology for the Republic of Korea and other advanced economies will be analyzed more thoroughly with an international perspective in mind. This comparison and international benchmarking will allow policy makers and

scholars to better appreciate how much the country has already moved into the circle of globally leading economies and what can be done to consolidate and strengthen its position.

Online around the World Laura M. Steckman, Marilyn J. Andrews, 2017-05-24
Covering more than 80 countries around the world, this book provides a compelling, contemporary snapshot of how people in other countries are using the Internet, social media, and mobile apps. How do people in other countries use the social media platform Facebook differently than Americans do? What topics are discussed on the largest online forum—one in Indonesia, with more than seven million registered users? Why does Mongolia rate in the top-ten countries worldwide for peak Internet speeds? Readers of *Online around the World: A Geographic Encyclopedia of the Internet, Social Media, and Mobile Apps* will discover the answers to these questions and learn about people's Internet and social media preferences on six continents—outside of the online community of users within the United States. The book begins with an overview of the Internet, social media platforms, and mobile apps that chronologically examines the development of technological innovations that have made the Internet what it is today. The country-specific entries that follow the overview provide demographic information and describe specific events influenced by online communications, allowing readers to better appreciate the incredible power of online interactions across otherwise-unconnected individuals and the realities and peculiarities of how people communicate in

today's fast-paced, globalized, and high-technology environment. This encyclopedia presents social media and the Internet in new light, identifying how the use of language and the specific application of human culture impacts emerging technologies and communications, dramatically affecting everything from politics to social activism, education, and censorship.

Plug-In Electric Vehicles David B. Sandalow, 2009-09-01 Plug-in electric vehicles are coming. Major automakers plan to commercialize their first models soon, while Israel and Denmark have ambitious plans to electrify large portions of their vehicle fleets. No technology has greater potential to end the United States' crippling dependence on oil, which leaves the nation vulnerable to price shocks, supply disruptions, environmental degradation, and national security threats including terrorism. What does the future hold for this critical technology, and what should the U.S. government do to promote it? Hybrid vehicles now number more than one million on America's roads, and they are in high demand from consumers. The next major technological step is the plug-in electric vehicle. It combines an internal combustion engine and electric motor, just as hybrids do. But unlike their precursors, PEVs can be recharged from standard electric outlets, meaning the vehicles would no longer be dependent on oil. Widespread growth in the use of PEVs would dramatically reduce oil dependence, cut driving costs and reduce pollution from vehicles. National security would be enhanced, as reduced oil dependence decreases the leverage and resources of petroleum exporters.

Brookings fellow David Sandalow heads up an authoritative team of experts including former government officials, private-sector analysts, academic experts, and nongovernmental advocates. Together they explain the current landscape for PEVs: the technology, the economics, and the implications for national security and the environment. They examine how the national interest could be served by federal promotion and investment in PEVs. For example, can tax or procurement policy advance the cause of PEVs? Should the public sector contribute to greater research and development? Should the government insist on PEVs to replenish its huge fleet of official vehicles? Plug-in electric vehicles are coming. But how soon, in what numbers, and to what effect? Federal policies in the years ahead will go a long way toward answering those questions. David Sandalow and his colleagues examine what could be done in that regard, as well as what should be done.
