Cartography in Central and Eastern Europe Georg Gartner, Felix Ortig, 2009-10-27 The region of Central and Eastern Europe has a rich and long history in cartography. Many important improvements in mapping and cartography have been proposed and performed by cartographers and researchers of that region. The long and outstanding history has led to a lively and vivid presence. Now contemporary methods for depicting the earth and its cultural and natural attributes are used. This book focuses on the contemporary activities in all major realms of cartography in Central and Eastern Europe. It covers aspects of theoretical, topographical, thematic and multimedia cartography, which have been presented at the first Symposium on Cartography for Central and Eastern Europe, which took place from February 16th to 17th, 2009 in Vienna, Austria and was organized by the International Cartographic Association (ICA) and the Vienna University of Technology. The symposium's aim was to bring together cartographers, GI scientists and those working in related disciplines from CEE with the goal of offering a platform for discussion and exchange and stimulation of joined projects. About 130 scientists from 19 countries followed the invitation and visited Vienna, Austria. A selection of fully reviewed contributions is edited in this book and is meant as a mirror of the wide range of activities in the realm of cartography in this region. The innovative and contemporary character of these topics has led to a great variety of interdisciplinary contributions. Topics cover an enormous range with heterogeneous relationships to the main book issues.

Safety and Reliability. Theory and Applications Marko Cepin, Radim Bris, 2017-06-14 Safety and Reliability – Theory and Applications contains the contributions presented at the 27th European Safety and Reliability Conference (ESREL 2017, Portorož, Slovenia, June 18-22, 2017). The book covers a wide range of topics, including: • Accident and Incident modelling • Economic Analysis in Risk Management • Foundational Issues in Risk Assessment and Management • Human Factors and Human Reliability • Maintenance Modeling and Applications • Mathematical Methods in Reliability and Safety • Prognostics and System Health Management • Resilience Engineering • Risk Assessment • Risk Management • Simulation for Safety and Reliability Analysis • Structural Reliability • System Reliability, and • Uncertainty Analysis. Selected special sessions include contributions on: the Marie Skłodowska-Curie innovative training network in structural safety; risk approaches in insurance and finance sectors; dynamic reliability and probabilistic safety assessment; Bayesian and statistical methods, reliability data and testing; organizational factors and safety culture; software reliability and safety; probabilistic methods applied to power systems; socio-technical-economic systems; advanced

safety assessment methodologies: extended Probabilistic Safety Assessment; reliability; availability; maintainability and safety in railways: theory & practice; big data risk analysis and management, and model-based reliability and safety engineering. Safety and Reliability – Theory and Applications will be of interest to professionals and academics working in a wide range of industrial and governmental sectors including: Aeronautics and Aerospace, Automotive Engineering, Civil Engineering, Electrical and Electronic Engineering, Energy Production and Distribution, Environmental Engineering, Information Technology and Telecommunications, Critical Infrastructures, Insurance and Finance, Manufacturing, Marine Industry, Mechanical Engineering, Natural Hazards, Nuclear Engineering, Offshore Oil and Gas, Security and Protection, Transportation, and Policy Making.

Industry 4.0: Trends in Management of Intelligent Manufacturing Systems Lucia

Knapčíková, Michal Balog, 2019-05-02 This book provides a comprehensive exchange of information on current developments in the management of manufacturing systems and Industry 4.0. The book's contributions establish channels of communication and disseminate knowledge among professionals working in manufacturing and related institutions. It features submissions from experts, researchers, academicians and practitioners in relevant fields, who share their knowledge from the field of management of manufacturing systems. The book's main theme is Management of Manufacturing Systems with support for Industry 4.0, Logistics and Intelligent Manufacturing Systems and Applications, Cooperation management and its effective applications. Topics include Logistics, RFID Applications, Industrial and Smart Logistics, Intelligent Manufacturing Systems and Applications, New Materials and Smart Technologies for Industry 4.0, Enterprise Information Systems, Innovation and Knowledge Management, and Sequencing solutions for Lean Manufacturing.

Regulating Water Security in Unconventional Oil and Gas Regina M. Buono, Elena López

Gunn, Jennifer McKay, Chad Staddon, 2019-10-31 This book addresses the need for deeper understanding of regulatory and policy regimes around the world in relation to the use of water for the production of 'unconventional' hydrocarbons, including shale gas, coal bed methane and tight oil, through hydraulic fracturing. Legal, policy, political and regulatory issues surrounding the use of water for hydraulic fracturing are present at every stage of operations. Operators and regulators must understand the legal, political and hydrological contexts of their surroundings, procure water for use in the fracturing and extraction processes, gain community cooperation or confront social resistance around water, collect flow back and produced water, and dispose of these wastewaters safely. By analysing and comparing different approaches to these issues from around the globe, this volume

gleans insights into how policy, best practices and regulation may be developed to advance the interests of all stakeholders. While it is not always possible to easily transfer ‘good practice’ from one place to another, there is value in examining and understanding the components of different legal and regulatory regimes, as these may assist in the development of better regulatory law and policy for the rapidly growing unconventional energy sector. The book takes an interdisciplinary approach and includes chapters looking at water-energy nexus security in general, along with issue-focused and geographically-focused case studies written by scholars from around the world. Chapter topics, organized in conjunction with the stage of the shale gas production process upon which they touch, include the implications of hydraulic fracturing for agriculture, municipalities, and other stakeholders competing for water supplies; public opinion regarding use of water for hydraulic fracturing; potential conflicts between hydraulic fracturing and water as a human right; prevention of induced seismic activity, and the disposal or recycling of produced water. Several chapters also discuss implications of unconventional energy production for indigenous communities, particularly as regards sustainable water management. This volume will be of interest to scholars and students of energy and water, regulators and policymakers and operators interested in ensuring that they align with emergent best global practice.

Kataklizmy, które zmieniały obraz Ziemi Piotr Kotlarz, 2021-01-06 (...) Piszę o zmianach klimatycznych natrafiamy na kolejną trudność w ich przedstawianiu, gdy skala zmian klimatycznych na różnych obszarach bywa odmienna, z tego powodu nie sposób, moim zdaniem, określić jakiegokolwiek jego cykliczności w skali globalnej. Z opisywanymi w tej książce kataklizmami wiążę się też tzw. „wielkie wymierania” gatunków istniejących na Ziemi. Mając, dzięki rewolucji informacyjnej, którą zawdzięczamy wynalazkowi Internetu, dostęp do aktualnych badań i mogąc dokonać pewnych porównań, zauważymy, że teorie tzw. „wielkiego wymierania” obarczone są efektem tzw. „spłaszczenia”. Nie wiedząc wcześniej o całej serii kataklizmów wiązaliśmy wymieranie z tym lub innym kataklizmem i ujmowaliśmy je globalnie, często zawężając czas ich występowania. Na szczęście kataklizmy, które dotyczą Ziemi nie dotyczą jednocześnie całego globu i dlatego po kilkuset, a nawet po kilku tysiącach lat, nawet na obszary prawie całkowicie pozbawione życia organicznego, te stopniowo wracają. Mogliśmy to prześledzić obserwując np. powrót życia na tereny bezpośrednio zniszczone erupcją wulkanu Krakatau w XIX wieku, czy wcześniej np. powrót życia na tereny Ameryki Północnej w wyniku upadku meteorytu na Grenlandię ok. 12,8 tys. lat temu. Próbuję w mojej pracy porównywać skutki różnych erupcji, ich skalę,

pamiętajmy przy tym, że w odległej przeszłości dochodziło do nich na odmiennych obszarach (innych prakontynentach). To ważne, gdy miało to niewątpliwy wpływ na rozwój życia na Ziemi, czasy intensywnego rozwoju i regresu przeplatały się, ale nie wszędzie miały taki sam przebieg i nie wszędzie zmiany te zachodziły w tym samym czasie. Wspomniane kataklizmy mają oczywisty związek nie tylko z klimatem. Asteroidy, które upadły na Ziemię przyniosły z sobą wiele minerałów, do których powstania dochodziło już w pasie asteroid w wyniku ich zderzania, a i uderzenie w Ziemię powodowało zmiany geologiczne (np. przypuszczalnym skutkiem takich upadków było powstawanie diamentów). Wiele skał ma charakter powulkaniczny, w wyniku tych erupcji powstawały np. pumeks, bazalt (nie możemy tego wykluczyć i tego, że istniejąca dziś w kalderach wulkanów magma pochodzi z kosmosu, że dotarła na Ziemię już po utworzeniu się jej skorupy). Wielkie kataklizmy były też przyczyną ruchu płyt tektonicznych i w ich konsekwencji orogenezy (powstawania gór).

Klimat a wulkany Piotr Kotlarz, 2022-04-28 Ostatni z zawartych w tej książce artykułów napisałem 15 stycznia tego roku. Tego dnia, późnym porankiem znalazłem na portalu onet.pl informację o erupcji wulkanu Hunga Tonga-Hunga Haʻapai. Właściwie nie chciałem już włączać tu więcej artykułów, sądziłem, że i tak wszystko zostało powiedziane. Moja hipoteza dotycząca przyczyn zmian klimatycznych została już wystarczająco wykazana, przedstawione dowody wydawały mi się wystarczające. Zmiany klimatyczne mają związek z wulkanizmem, zależą też od prądów oceanicznych i skali zlodowacenia w danym okresie. Wpływ mają też procesy zachodzące w stratosferze...

Geospatial Thinking Marco Painho, Maribel Yasmina Santos, Hardy Pundt, 2010-07-20 For the fourth consecutive year, the Association of Geographic Information Laboratories for Europe (AGILE) promoted the edition of a book with the collection of the scientific papers that were submitted as full-papers to the AGILE annual international conference. Those papers went through a thorough competitive review process. The 13 AGILE conference call for full-papers of original and unpublished fundamental scientific research resulted in 54 submissions, of which 21 were accepted for publication in this volume (acceptance rate of 39%). Published in the Springer Lecture Notes in Geoinformation and Cartography, this book is associated to the 13 AGILE Conference on Geographic Information Science, held in 2010 in Guimarães, Portugal, under the title “Geospatial Thinking”. The efficient use of geospatial

information and related technologies assumes the knowledge of concepts that are fundamental components of Geospatial Thinking, which is built on reasoning processes, spatial conc- tualizations, and representation methods. Geospatial Thinking is associated with a set of cognitive skills consisting of several forms of knowledge and cognitive operators used to transform, combine or, in any other way, act on that same knowledge. The scientific papers published in this volume cover an important set of topics within Geoinformation Science, including: Representation and Visualisation of Geographic Phenomena; Spatiotemporal Data Analysis; Geo-Collaboration, Participation, and Decision Support; Semantics of Geoinformation and Knowledge Discovery; Spatiotemporal Modelling and Reasoning; and Web Services, Geospatial Systems and Real-time Appli- tions.

The Sun as a Star Roger John Tayler,1997 As our nearest star, the Sun offers a unique opportunity to study stellar physics in action. Following the success of his previous books, *Galaxies* and *The Stars*, Roger Tayler presents the first full picture of how studies of the Sun and the solar system help us understand stars in general and other planetary systems. Using mathematics appropriate for advanced undergraduate students in physics, this textbook provides a broad and wide-ranging introduction to the Sun as a star. Succinct derivations of key results - such as the properties of spectral lines, the theory of stellar oscillations, plasma physics, magnetohydrodynamics and dynamo theory - are provided in a number of handy appendices, ensuring that the book is completely self contained. Altogether, this is an invaluable textbook for students studying the Sun, stars, the solar-terrestrial environment and the formation of planetary systems.

Air Pollution and Plant Life J. N. B. Bell,M. Treshow,2002-05-22 *Air Pollution and Plant Life* - Ein idealer Studienbegleiter zu Lehrveranstaltungen in den Bereichen Umwelt- und Pflanzenwissenschaft. Jetzt neu in der 2. Auflage. Dieser Band bietet einen umfassenden Überblick über die direkten und indirekten Auswirkungen der Luftverschmutzung auf die Pflanzenwelt und ihre Folgen für die allgemeine pflanzliche Produktivität. Untersucht werden verschiedene Schadstoffe, wie z.B. Oxidantien, Stickstoffoxide, Schwefeloxide, Fluoride und Feststoffteilchen, Schadstoffquellen sowie die Aufnahme und Speicherung einzelner Schadstoffe durch die Pflanzen. Darüber hinaus werden die aktuellen Richtlinien zur Luftqualität und deren Rolle in der Umweltpolitik umfassend erläutert. *Air Pollution and Plant Life* ist aber nicht nur ein wichtiges Lehrbuch für Studienanfänger und fortgeschrittene Studenten, sondern auch ein ideales Nachschlagewerk für Forscher in diesem Bereich.
