Celestial Navigation in the GPS Age John Karl,2007 Many books on celestial navigation take shortcuts in explaining concepts; incorrect diagrams and discussion are often used for the sake of moving the student along quickly. This book tells the true story-and the whole story. It conveys celestial navigation concepts clearly and in the shortest possible time.It's tailored for navigation in the GPS age-a time of computers, calculators, and web resources. Although it covers all of the traditional methods of 'working a sight, ' the primary thrust is using the (under \$10) scientific calculator. By using equations that you key into your calculator, this book guides you toward a better understanding of the concepts of celestial navigation.You will learn novel ways to plot lines of position, ways to check your sextant accurately by star sights, and how to tell what time it is from a moon sight. The many appendices are a treasure of references and explanations of abstract ideas. Celestial Navigation is a crucial skill for the offshore navigator to know, this book provides the shortest path to that knowledge.

How to Go Anywhere (and Not Get Lost) Hans Aschim,2021-03-30 Born To Explore Get outside with this interactive boom that shows how explorers have found their way around the planet for thousands of years. Read about the ancient Polynesians who tracked the stars and waves to sail precise paths through the ocean. Or the Age of European Exploration navigators who use compasses and dead reckoning to reach the New World. And learn the science behind radar and modern-day GPS satellites. Then discover how to do it yourself! With illustrated activities as well as handy tips throughout, you'll learn the fascinating history and seriously useful skills to become a true navigator. Up your adventure game and learn to: –Find north and south by reading the trees –Make a simple compass –Use the stars to tell time –Build a basic sextant –Get your bearings using the sun –Go treasure hunting with GPS

Land Navigation Handbook W. S. China Satellite Navigation Conference (CSNC) 2020 Proceedings: Volume II Jiadong Sun,Changfeng Yang,Jun Xie,2020-06-06 China Satellite Navigation Conference (CSNC 2020) Proceedings presents selected research papers from CSNC 2020 held during 22nd-25th November in Chengdu, China. These papers discuss the technologies and applications of the Global Navigation Satellite System (GNSS), and the latest progress made in the China BeiDou System (BDS) especially. They are divided into 13 topics to match the corresponding sessions in CSNC2020, which broadly covered key topics in GNSS. Readers can learn about the BDS and keep abreast of the latest advances in GNSS techniques and applications.

Wilderness Navigation Bob Burns,Mike Burns,2015-02-24 [CLICK HERE](#) to download a sample • The official navigation textbook used in outdoor education courses by thousands of students • Goodreads.com readers rated the previous edition 4 out of 5 stars (and now it's even better!) • Map and compass skills remain the foundation for traveling safely in the wilderness This new third edition is a major and complete update of the popular textbook: • Improved throughout for clarity, with chapter objectives presented at the beginning of each chapter and summaries, "skills check" mini-quizzes, and practice problems listed at the end • Updated descriptions of the most current maps, compasses, altimeters, and Global Positioning System (GPS) receivers • Updated declination maps for the United States and the world (declination changes over time and compasses must be adjusted for a specific location to provide correct readings) • Much-expanded GPS chapter, including interfacing the GPS receiver with the home computer, maximizing battery life, and using the GPS function on a "smart" phones (along with a description of their limitations) • Additional information on non-GPS navigational techniques • Recommended websites, apps, and other sources of useful navigational information

The Practical Guide to Celestial Navigation Phil Somerville,2021-10-14 THIS EBOOK EDITION IS DESIGNED TO BE EXPERIENCED ON COLOUR DEVICES The practical guide to celestial navigation - know what to do step by step, understand why you're doing it, and be confident that you can put it into practice when on board. Did you know that a person standing on the equator is effectively travelling at 900mph? And did you know that you can use this information to work out where you are in the world, to an accuracy of about 3 or 4 miles? No GPS, no computers. Just a sextant, some tables from an Almanac and the knowledge in this book. It's the only back up if the GPS goes down, so it's a matter of safety. If you want to qualify as a commercial skipper/superyacht captain you need to know how to carry out celestial navigation. And if you want to pass the RYA Ocean YachtmasterTM exam, you need to know it too. It's a major stumbling block for many sailors wanting or needing to take their next qualifications, and the other books on the market are complex and often assume some prior understanding. This book fulfils the need for a clear explanation of celestial navigation, illustrated with colour diagrams and including unique

checklist sheets to enable you to repeat all those calculations you learned back at home, when you're on deck. Without overwhelming the reader with a load of theory from the off, the author breaks down what you need to do, step by step, explaining why at every point – giving the information context, and making it more interesting and memorable. He has trained students in this subject for years, and here he's able to use his experiences of what works, and what are the common pitfalls – he even includes a troubleshooting chapter near the end, going through errors commonly made, and how to spot them. The objective is that readers will finish the book not only knowing what to do, but really understanding why, and being able to make sense of it all again later (rather than just getting through an exam and finding themselves at a loss when on deck). The author also includes time-tested 'proformas' – quick reference sheets that sailors can refer to when they come to putting the theory into practice on board, avoiding the terrifying 'cold start' that most sailors experience when they suddenly need to put their theoretical knowledge to the test in the real world.

From Polaris to Trident Graham Spinardi,1994-01-06 This book provides a complete history of the US Fleet Ballistic Missile programme from its inception in the 1950s and the development of Polaris to the deployment of Trident II in 1990. Writing in an accessible yet scholarly manner, Graham Spinardi bases his historical documentation of FBM development on interviews with many of the key participants. His study confronts a central issue: is technology simply a tool used to achieve the goals of society, or is it an autonomous force in shaping that society? FBM accuracy evolved from the city-busting retaliatory capability of Polaris to the silo-busting 'first strike' potential of Trident. Is this a case of technology 'driving' the arms race, or simply the intended product of political decisions? The book provides a comprehensive survey of the literature looking at the role of technology in the arms race, and seeks to explain technological development using a 'sociology of technology' approach.

EVOLUTION OF THE US SEA-BASED NUCLEAR MISSILE DETERRENT: WARFIGHTING CAPABILITIES GEORGE J. REFUTO,2011-08-12 This historical research study traces and analyzes the technological development and force deployment of US submarine-launched strategic nuclear ballistic missiles, and the evolution of their military missions - during and after the Cold War - from countervalue (civilian, political and economic targets) strategic deterrence to the wider range of strategic and theater-tactical nuclear/conventional military force targeting, characteristic of counterforce or warfighting capabilities. Scope of this study also includes: US nuclear ballistic missile submarine survivability against antisubmarine warfare operations, and the role of the US fleet ballistic missile force in current 21st Century regional and global military threat scenarios, and beyond.

NOLS Wilderness Navigation Darran Wells,2005 The National Outdoor Leadership School's official guide to finding your way in the wilderness Covers all navigational techniques, from map and compass to GPS and gives instructions on taking bearings and planning routes on USGS maps Up-to-date information on tools, equipment, and software For wilderness travelers, good navigation ability can mean the difference between a successful day hike and an unplanned overnight stay. Based on the curriculum of the National Outdoor Leadership School, NOLS Wilderness Navigation gives you the skills you need to confidently find your way on and off the trail. Included here are methods for orienting yourself by the sun and the stars alone, easy-to-follow explanations of map and compass techniques, and advice on using an altimeter. There's also a comprehensive section on using GPS technology-without becoming dependent on it. Exercises at the end of each chapter help readers gradually develop their skills and build their confidence.

How To Pick The Perfect Portable GPS Unit Neville Francis,2013-09-06 As more and more individuals have to travel for work, travel and a myriad of other reasons, it has become somewhat of a priority to have the best technological device to help them get from one point to the next. As a result of this GPS Units have become exceedingly important, especially for those who are on the road on a daily or weekly basis. That is why How To Pick The Perfect Portable GPS Unit is a must for every consumer. Gone are the days when printed maps are used to find out just which way to go, not to mention that they tend to become outdated pretty quickly as more and more changes are made to the infrastructure. In this day and age electronic devices are needed to help the user to select the fastest route to their destination. They are pretty user friendly and can easily be updated.

Celestial Navigation Dominique F. Prinnet,2014-07-17 This manual has grown out of all the courses given by Dominique Prinnet, a certified Instructor-Evaluator for Sail Canada who has been teaching celestial navigation since 2000. It has benefitted from the thoughtful contributions of over 100 students. The aim of Celestial Navigation is to give a sufficient grounding in the subject to determine position at sea using a sextant for fixes on the sun, moon, stars and planets. Furthermore, the material presented will prepare a reader who wishes to pursue a Celestial Navigation Certificate through self-study. The subject requires some comfort with the basic concepts of navigation, but the prospective navigator only needs to know how to add and subtract either times or angles. Lucid and well-paced, Celestial Navigation starts with fundamentals and definitions which ensure that a motivated student need not bring anything more to the table than his or her willingness to master the subject. Richly illustrated, it includes a chapter with more than forty pages of review exercises covering all topics. The cleverness of many of the concepts, explained here, will bring about great intellectual joy and satisfaction. Whether you are a recreational sailor or an individual pursuing professional certification as a navigator, Celestial Navigation will teach you what you need to know.
