In 12 chapters, you will discover that you can. You will dig deep to find your inner athlete. You'll learn how to train smart, recover well, sync your runs to your menstrual cycle and fuel right. I CAN RUN will ensure you never again wait until you're thin enough, fast enough, athletic enough, whatever-next enough to call yourself a runner, because if you put one foot in front of the other, repeatedly, you are a runner. Getting outside, surrounding yourself in nature and moving your body is more important than ever in these anxiety-inducing times, and Amy's debut will give you the encouragement and know-how that you need to do this. I CAN RUN recognises that this is hard and that committing to consistent training is often more of an accomplishment than the 10K, half marathon or marathon race itself. You will find comfort and encouragement in Amy's experience of cramps, chafing and the occasional little sick, while learning from leading experts about how to set yourself up for success and get the very best from your runs both physically and mentally. Biometeorology for Adaptation to Climate Variability and Change Kristie L. Ebi, Ian Burton, Glenn McGregor, 2008-12-17 Biometeorology continues to grow as a discipline. It is increasingly recognised for its importance in providing science of relevance to society and well being of the environment. This book is the first in a new book series on Biometeorology. The purpose of the new series is to communicate the interdisciplinary philosophy and science of biometeorology to as wide an audience as possible, introduce scientists and policy makers to the societal relevance of and recent developments in its fields and demonstrate how a biometeorological approach can provide insights to the understanding and possible solution of cross-cutting environmental issues. One such cross-cutting environmental issue is climate change. While the literature on the science of climate change, climate change mitigation and the impacts of climate change is voluminous, that on adaptation to climate change is meagre in comparison. The purpose of this book is to partly redress this imbalance by providing insights from a biometeorological perspective. The book acknowledges that society has a long history of adapting to the impacts associated with climatic variability and change but makes the

point that climate change poses a real threat to already strained coping systems. Therefore there is a need to realign human use systems with changing climate conditions.

**Impacts of Climate Change on Human Health** Clare Heaviside, 2021-01-05 Climate change poses a serious challenge to our health and wellbeing. The increasing frequency of extreme weather events such as floods, droughts, and heatwaves, and the direct impacts of changes in temperature have direct impacts on health. At the same time, broader environmental change affects infectious disease risk, air pollution, and other forms of exposure. The different ways in which climate change will affect health are complex, interactive, and different communities are disproportionately affected. International actions such as the Paris Agreement and the Sustainable Development Goals recognise the future risks to society and acknowledge that we are already committed to a certain level of climate change. Future adaptation measures therefore need careful assessment and implementation for us to be able to minimise the potential risks from climate change and, at the same time, maximise the potential health benefits of a cleaner, greener world. This Special Issue comprises original research articles and detailed reviews on the likely impacts of climate change on health in a range of geographical settings, and the potential for adaptation measures to reduce some of these risks. Ultimately, studies like these will motivate policy level action for mitigation and help in determining the most effective methods of adaptation to reduce negative impacts in future through embedding scientific evidence into practice.

*Satellite Remote Sensing and the Management of Natural Resources* Nathalie Pettorelli, 2019-05  
The ability to anticipate the impacts of global environmental changes on natural resources is fundamental to designing appropriate and optimised adaptation and mitigation strategies. However, this requires the scientific community to have access to reliable, large-scale information on spatio-temporal changes in the distribution of abiotic conditions and on the distribution, structure, composition, and functioning of ecosystems. Satellite remote sensing can provide access to some of this fundamental data by offering repeatable, standardised, and verifiable information that is directly relevant to the monitoring and management of our natural capital. This book demonstrates how ecological knowledge and satellite-based information can be effectively combined to address a wide array of current natural resource management needs. By focusing on concrete applied examples in both the marine and terrestrial realms, it will help pave the way for developing enhanced levels of collaboration between the ecological and remote sensing communities, as well as shaping their future research directions. *Satellite Remote Sensing and the Management of Natural Resources* is primarily aimed at ecologists and remote sensing specialists, as well as policy makers and practitioners in the fields of conservation biology, biodiversity monitoring, and natural resource management.
