In the late 22nd century mankind expands into the the stars only to find them in more turmoil than it's own internal nationalism. Pitted against the onslaught of the expansion of the Stotatl Empire, humanity must defend itself while forging alliances with others who face absorption. Whether you're a Terran soldier or an Aronhi Warrior from the partially conquered Aronhi Empire, one goal stands supreme above all, survival. The wits and courage to stand and fight against superior odds and create victories from difficult situations. But not all the glory lies in the hands of warriors. Exploration of the vast wilderness that is space, charting dangers, finding resources and contacting potential allies is a cornerstone of survival. The conflict, intrigue, action and adventure of these times provide an exciting roleplaying environment for players, whether they like playing space marines, traders, spies, investigators or just general adventure seekers. The span of events in reality are all possible, giving a wide scope of play. If you don't like flying around the cosmos as a British Royal Space Marine then you could always visit a primitive society and face the challenge of worlds filled with mystery, fantasy and danger. What you get The FSpaceRPG Reference Manual is a 133 page rulebook with a set of condensed rules designing for character generation and general play. Ideal for players.

The Computer User's Survival Guide Joan Stigliani,1995-10-01 You probably suspect, on some level, that computers might be hazardous to your health. You might vaguely remember a study that you read years ago about miscarriages being more frequent for data entry operators. Or you might have run into a co-worker wearing splints and talking ominously about Workers' Comp insurance. Or you might notice that when you use a computer too long, you get stiff and your eyes get dry. But who wants to worry about such things? Surely, the people wearing splints must be malingerers who don't want to work? Surely, the people who design keyboards and terminals must be working to change their products if they are unsafe? Surely, so long as you're a good worker and keep your mind on your job, nothing bad will happen to you? The bad news is: You can be hurt by working at a computer. The good news is that many of the same factors that pose a risk to you are within your own control. You can take action on your own to promote your own health -- whether or not your terminal manufacturer, keyboard designer, medical provider, safety trainer, and boss are working diligently to protect you. The Computer User's Survival Guide looks squarely at all the factors that affect your health on the job, including positioning, equipment, work habits, lighting, stress, radiation, and general health. Through this guide you will learn: a continuum of neutral postures that you can utilize at different work tasks how radiation drops off with distance and what electrical equipment is responsible for most exposure how modern office lighting is better suited to working on paper than on a screen, and what you can do to prevent glare simple breathing techniques and stretches to keep your body well oxygenated and relaxed, even when you sit all day how reading from a screen puts unique strains on your eyes and what kind of vision breaks will keep you most productive and rested what's going on under the skin when your hands and arms spend much of the day mousing and typing, and how you can apply that knowledge to prevent overuse injuries The Computer User's Survival Guide is not a book of gloom and doom. It is a guide to protecting yourself against health risks from your computer, while boosting your effectiveness and your enjoyment of work.
