**Registries for Evaluating Patient Outcomes** Agency for Healthcare Research and Quality/AHRQ,2014-04-01 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

*An Update on Research Issues in the Assessment of Birth Settings* National Research

Council, Institute of Medicine, Board on Children, Youth, and Families, 2013-09-23 More than 30 years ago, the Institute of Medicine (IOM) and the National Research Council (NRC) convened a committee to determine methodologies and research needed to evaluate childbirth settings in the United States. The committee members reported their findings and recommendations in a consensus report, *Research Issues in the Assessment of Birth Settings* (IOM and NRC, 1982). An Update on Research Issues in the Assessment of Birth Settings is the summary of a workshop convened in March, 2013, to review updates to the 1982 report. Health care providers, researchers, government officials, and other experts from midwifery, nursing, obstetric medicine, neonatal medicine, public health, social science, and related fields presented and discussed research findings that advance our understanding of the effects of maternal care services in different birth settings on labor, clinical and other birth procedures, and birth outcomes. These settings include conventional hospital labor and delivery wards, birth centers, and home births. This report identifies datasets and relevant research literature that may inform a future ad hoc consensus study to address these concerns.

*Recurrent Pregnancy Loss* Asher Bashiri, Avi Harlev, Ashok Agarwal, 2016-01-13 Providing the latest evidence-based information on etiology, evaluation and treatment, this unique text provides an in-depth, comprehensive discussion of the epidemiology, genetic and endocrinologic factors and medical and surgical management of recurrent pregnancy loss (RPL). Taking a multidisciplinary approach including psychological treatment and patient perspectives, all aspects of current RPL prevention and treatment are elucidated. Detailed chapters provide real-world illustrative material and cover the set-up and management of RPL clinics and databases, containing practical tips. *Recurrent Pregnancy Loss* will be an excellent resource for OB-GYN specialists, general and reproductive endocrinologists, radiologists, hematologists, psychiatrists, psychologists, and any other investigators or clinicians treating patients confronted with this emotionally and physically trying condition.

**Evaluation and Management of High-Risk Pregnancies: Emerging Research and Opportunities** Nanda, Sapna, 2020-07-10 Complications during and after pregnancy and birth result in hundreds of thousands of deaths each year and can lead to lifelong health problems. Even with these complications, however, early detection and prenatal care can further reduce risk to the mother and baby. However, inadequate medical services, shortage of medical resources, and lack of or misinformation can hinder a woman's ability to successfully manage her pregnancy. This not only affects the health of the people immediately concerned and their families, but also has implications for global stability and the balance between population and resources. *Evaluation and Management of High-Risk Pregnancies: Emerging Research and Opportunities* is a pivotal reference source that provides vital research on safeguarding mothers and babies through the availability of medical knowledge, cost-effective interventions, and the availability of widespread obstetric services. While highlighting topics such as labor complications, maternal mortality, and reproductive health, this publication explores exposure to sexually transmitted diseases as well as the methods of physical and mental healthcare. This book is ideally designed for obstetricians, gynecologists, world health organizations, policymakers, hospitals, health professionals, reproduction researchers, and physicians.

**Complications of Trauma** Kenneth L. Mattox, 1994 A textbook that explicitly concentrates on arming surgeons with the knowledge to meet the challenges of the myriad complications that may be encountered in treating trauma patients. The first section addresses the five major complications (hemorrhage, respiratory failure, renal failure, sepsis, and multi-organ syndrome) that can occur in any trauma patient. The second section, *Prehospital and Emergency Center Trauma Complications*, discusses the problems inherent in the first stages of managing a trauma patient, as well as those that can occur

within systems (transportation, communication). The third section addresses complications specific to certain areas or populations (e.g., immunology, pediatrics, radiology, wounding agents), and the final section discusses complications by anatomical region. **Prenatal Assessment of Multiple Pregnancy** Isaac Blickstein, Louis G.

Keith, 2018-04-17 Following on from the success of their previous standard textbook on Multiple Pregnancy, the authors have refocused their attention on prenatal assessment in multiple pregnancy and come up with condensed and revised material in a free-standing text. Multiple pregnancies are associated with higher levels of morbidity and fetal distress, and so effective and rapid diagnosis of problems is paramount. Those clinicians who would not have a practical application for all the aspects covered comprehensively in the earlier work will find this volume a clinically orientated and extremely useful addition to their working library.

**Bleeding During Pregnancy** Eyal K. Sheiner, 2011-06-23 The phenomenon of bleeding has been shown to appear in up to 22% of all pregnancies and is associated with significant maternal and fetal morbidities, and even mortality. Although vaginal bleeding occurs mainly during the first trimester, it can appear at any stage of pregnancy and in the postpartum period. This sometimes life-threatening event requires an extensive work-up in order to recognize its cause and establish a rapid and effective therapeutic approach. This book is a comprehensive appraisal of this critical condition. It draws on evidence-based data and brings together, in a single volume, updated information on all aspects of pregnancy-related bleeding. A global group of interdisciplinary experts contributed chapters on: bleeding during early pregnancy (early pregnancy loss, ectopic pregnancy, gestational trophoblastic disease, and cancer of the reproductive tract during pregnancy); bleeding in late pregnancy (preterm delivery, placental abruption, placenta previa, vasa previa and uterine rupture); and postpartum hemorrhage.

Recurrent First Trimester Pregnancy Loss, An Issue of Obstetrics and Gynecology Clinics, E-Book William H. Kutteh, 2014-02-18 This issue of the Obstetrics and Gynecology Clinics in North America will focus on the advances in the evaluation and management of Recurrent Pregnancy Loss (RPL) that have emerged within the last few years. Although spontaneous pregnancy loss occurs in approximately 15% to 20% of clinically recognized pregnancies in reproductive-aged women, RPL occurs in 2% to 5% of the same population. Recent reports on large populations of women with RPL have helped to characterize the incidence and diversity of this heterogeneous disorder, and a definite cause of pregnancy loss can be established on over 50% of all couples after a thorough evaluation. New diagnostic strategies, which include 23-chromosome microarray genetic testing of the products of conception in failed pregnancies, offer the promise of understanding the cause of most pregnancy losses. These recent advances, combined with the contributions from the authors in this issue of Clinics and many others interested in this field, lead to the publication of the long-awaited publication on evaluation and treatment of RPL from the Practice Committee of the American Society for Reproductive Medicine. A complete evaluation will include investigations into genetic, anatomic, immunologic, endocrinologic, and iatrogenic factors.

*Psychosocial Adaptation to Pregnancy* Regina Lederman, Karen Weis, 2009-09-16 presented in the Introduction (Chapter 1). The focus of Chapter 1 is twofold: (1) to present the research foundations for the psychophysiological correlates of prenatal psychosocial

adaptation and the seven prenatal personality dimensions with progress in labor and birth outcomes, and particularly (2) to present the theory underlying the seven dimensions of prenatal psychosocial adaptation, which are further analyzed in the following seven chapters. Chapters 2–8 present a content analysis of the interview responses to the seven significant prenatal personality dimensions that are predictive of pregnancy adaptation, progress in labor, birth outcomes, and postpartum maternal psychosocial adaptation, and they include: (1) Acceptance of Pregnancy, (2) Identification with a Motherhood Role, (3) Relationship with Mother, (4) Relationship with Husband, (5) Preparation for Labor, (6) (Prenatal) Fear of Pain, Helplessness, and Loss of Control in Labor, and (7) (Prenatal) Fear of Loss of Self-Esteem in Labor. There is no other comparable comprehensive, in-depth, prenatal personality research or empirical and content analysis of pregnancy-specific dimensions of maternal psychosocial adaptation to pregnancy.

*Handbook of Clinical Laboratory Testing During Pregnancy* Ann M.

Gronowski, 2004-05-06 Practicing specialists in pathology, laboratory medicine, and obstetrics comprehensively summarize the latest scientific findings and their experiences in the use and interpretation of laboratory testing in patients who are pregnant or experiencing recurrent pregnancy loss. Topics of interest include the effects of normal physiological changes on test results, test selection for diagnosis, changes in reference

ranges, monitoring the pregnant patient, new technologies, and the limitations of laboratory testing. The authors not only clearly explain currently used test methods and technologies for the nontechnical reader, but also provide comprehensive details for laboratory professionals. The comprehensive appendix that compiles published normal reference ranges by first, second, and third trimester constitutes an excellent resource for professionals caring for pregnant women.

Psychosocial Adaptation to Pregnancy Regina P. Lederman, Karen L. Weis, 2020-09-15  
The fourth edition of this book updates and elaborates on the seven dimensions of maternal emotional health that have significant impact on delivery, postpartum adaptation, infant health, and early childhood development. Supported by the authors' original research and interviews, the book provides readers with an analysis of the role of these core functions throughout pregnancy, as well as practical materials for use with pregnant clients in the form of assessment instruments and evidence-based interventions for promoting positive development. The book provides a theoretical framework with rationales for the seven psychosocial dimensions, therapeutic and counseling intervention strategies to improve adaptive development in each of the seven psychosocial dimensions, findings specific to women in diverse cultural groups, a chapter devoted to women in the military and military spouses, and discussion of salient issues of pregnancy, including physical changes, body image, intimacy, trust, and ambivalence. The book focuses on the seven dimensions of maternal prenatal emotional health: Acceptance of the pregnancy. Motivation and preparation for motherhood. Relationship with husband/partner. Relationship with her own mother. Preparation for labor. Sense of control in labor Self-Esteem and Well-Being in labor. Psychosocial Adaptation to Pregnancy is a significant addition to the psychosocial assessment literature, a needed resource for clinical and health psychologists, clinical social workers, marriage and family therapists, professional counselors, midwives, and obstetrical nurses. It is also adaptable to undergraduate and graduate courses in maternal reproductive health and obstetrical nursing.

Birth Settings in America National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Assessing Health Outcomes by Birth Settings, 2020-05-01 The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.
