Consumer Protection, Automated Shopping Platforms and EU Law Christiana N. Markou,2019-09-10 This book looks at two technological advancements in the area of e-commerce, which dramatically seem to change the way consumers shop online. In particular, they automate certain crucial tasks inherent in the 'shopping' activity, thereby relieving consumers of having to perform them. These are shopping agents (or comparison tools) and automated marketplaces. It scrutinizes their underlying processes and the way they serve the consumer, thereby highlighting risks and issues associated with their use. The ultimate aim is to ascertain whether the current EU regulatory framework relating to consumer protection, e-commerce, data protection and security adequately addresses the relevant risks and issues, thus affording a 'safe' shopping environment to the e-consumer.

Data Engineering and Data Science Kukatlapalli Pradeep Kumar,Aynur Unal,Vinay Jha Pillai,Hari Murthy,M. Niranjnamurthy,2023-08-29 DATA ENGINEERING and DATA SCIENCE Written and edited by one of the most prolific and well-known experts in the field and his team, this exciting new volume is the “one-stop shop” for the concepts and applications of data science and engineering for data scientists across many industries. The field of data science is incredibly broad, encompassing everything from cleaning data to deploying predictive models. However, it is rare for any single data scientist to be working across the spectrum day to day. Data scientists usually focus on a few areas and are complemented by a team of other scientists and analysts. Data engineering is also a broad field, but any individual data engineer doesn’t need to know the whole spectrum of skills. Data engineering is the aspect of data science that focuses on practical applications of data collection and analysis. For all the work that data scientists do to answer questions using large sets of information, there have to be mechanisms for collecting and validating that information. In this exciting new volume, the team of editors and contributors sketch the broad outlines of data engineering, then walk through more specific descriptions that illustrate specific data engineering roles. Data-driven discovery is revolutionizing the modeling, prediction, and control of complex systems. This book brings together machine learning, engineering mathematics, and mathematical physics to integrate modeling and control of dynamical systems with modern methods in data science. It highlights many of the recent advances in scientific computing that enable data-driven methods to be applied to a diverse range of complex systems, such as turbulence, the brain, climate, epidemiology, finance, robotics, and autonomy. Whether for the veteran engineer or scientist working in the field or laboratory, or the student or academic, this is a must-have for any library.
