Body Scans and Bottlenecks Sunil Chopra, Scott D. Flamm, Waikar Sachin, 2017 A midwest hospital purchases new CT Scanners which are much faster than the existing technology. Processes in the radiology department are optimized to the older, existing scanners and technicians are unable to take full advantage of the new scanner speed. The hospital finds itself working to change the processes to suit the new scanners capabilities and take full advantage of their speed. This case allows students to analyze process capacity and time performance in different settings and understand how process structure impacts both operational and financial performance.

**The Digital Document** Bruce Duyshart, 2013-02-01 Documents, such as drawings, memos and specifications, form an essential function in the design and construction industry. Throughout the lifecycle of a built asset, starting from an initial design idea, right through to a final built form and its ongoing management, thousands, even millions of documents can be used to convey various forms of information to a range of interested parties. In many ways, therefore, the success of a design, or construction-based company, relies upon an understanding of the use of documents, as well as the technologies and techniques that are used to create them. The Digital Document provides an extensive background to the issues and technologies surrounding this very important topic. It examines a technical subject in an insightful manner that is neither intimidating nor confusing, even to the novice computer user. By introducing the subject through a series of preliminary reviews of current practices and essential computing technologies, the reader is able to better appreciate the benefits and capabilities of a wide range of digital document types. This book explores the role of documents in a professional practice, examines the components, capabilities, viability, and use of digital documents in the design and construction industry, and identifies and explains many of the standards in use today. In order to facilitate a better understanding of digital document technologies, a number of essential reviews are provided including: - the definition and purpose of a document - how documents are typically used by design professionals - the nature of the digital document environment - the data types which make up digital documents The

Digital Document is an essential reference for the architect, engineer or design professional that wants to find out more about effective communication in the digital workplace. Bruce Duyshart is an IT Project Manager with Lend Lease Corporation and specialises in the development and implementation of digital media and information management technologies on design and construction projects. He holds a Masters degree in Architecture and is also an academic associate of the Faculty of Architecture, Building and Planning at the University of Melbourne. He has written numerous papers on emerging technologies in the architecture, engineering and construction industry, and has developed Internet web sites for the Royal Australian Institute of Architects and Architecture Media.

Best Technologies for Public Libraries Christopher DeCristofaro, James Hutter, Nick Tanzi, 2020-01-08 Emerging technologies can intimidate with their cost and uncertainty—this book provides flexible options for adopting the most popular ones. Introducing new technologies to your library can be a daunting process; they can be costly, they may be unfamiliar to many staff members, and their success is far from assured. To address these concerns, Best Technologies for Public Libraries accommodates budgets large and small, providing options for both the ambitious and the cost-conscious. Authors Christopher DeCristofaro, James Hutter, and Nick Tanzi provide a resource for staff looking to incorporate a number of emerging technologies into their library and makerspaces. Each chapter explores a new technology, including 3D printing, drones, augmented reality, and virtual reality, covering how the technologies work, the selection process, training, sample programming, best practices, and relevant policy. By describing a variety of program and service ideas across age groups, the book gives readers the ability to first evaluate them within the context of their own organization before incorporating ideas à la carte. This approach helps readers to adopt these new technologies and create policies with uses already in mind.

Picture Archiving and Communication Systems (PACS) in Medicine K.S. Chuang, H.K. Huang, O. Ratib, A.R. Bakker, G. Witte, 2013-06-29 This volume contains the proceedings of the NATO Advanced Study Institute on Picture Archiving and Communication Systems (PACS) in Medicine held in Evian, France, October 14- 26, 1990. The program committee of the institute consisted of H.K. Huang (Director), Osman Ratib, Albert Bakker, and Gerd Witte. This institute brought together approximately 90 participants from 15 countries. These proceedings are the accumulation of eight years of research and development results in PACS by various dedicated groups throughout the world. The purpose of this institute was to review the most recent technology available for PACS and some clinical results. The readers should notice the remarkable advances in this field by comparing the contents in these proceedings with those in a previous institute on Pictorial Information Systems in Medicine held August 27 - September 7, 1984 in Braunlage/Harz, Federal Republic of Germany, and published as Vol. 19 in this series. The institute was organized according to four categories: PACS components and system integration, PACS and related research in various countries and manufacturing companies, clinical experience and research support, and participants' scientific communications. In PACS components, we included image acquisition, workstations, data storage and networking. In system integration, topics on interfaces between Hospital Information System (HIS), Radiology Information System (RIS) and PACS, clinical reports, the ACR/NEMA standard, databases, reliability, and system integration were discussed. This lecture series emphasized the technical detail and how to aspects.

**Sensor Signal and Information Processing II** Wai Lok Woo, Bin Gao, 2020-12-29 In the current age of information explosion, newly invented technological sensors and software are now tightly integrated with our everyday lives. Many sensor processing algorithms have incorporated some forms of computational intelligence as part of their core framework in problem solving. These algorithms have the capacity to generalize and discover knowledge for themselves and learn new information whenever unseen data are captured. The primary aim of sensor processing is to develop techniques to interpret, understand, and act on information contained in the data. The interest of this book is in developing intelligent signal processing in order to pave the way for smart sensors. This involves mathematical advancement of nonlinear signal processing theory and its applications that extend far beyond traditional techniques. It bridges the boundary between theory and application, developing novel theoretically inspired methodologies targeting both longstanding and emergent signal processing applications. The topic ranges from phishing detection to integration of terrestrial laser scanning, and from fault diagnosis to bio-inspired filtering. The book will appeal to established practitioners, along with researchers and students in the emerging field of smart sensors processing.
