Mark Jonathan Butler

Unlocking the Groove Mark Jonathan Butler,2006 The first music-driven analysis of electronic dance music.

Energy Flash Simon Reynolds,2012-03-01 Ecstasy did for house music what LSD did for psychedelic rock. Now, in *Energy Flash*, journalist Simon Reynolds offers a revved-up and passionate inside chronicle of how MDMA (“ecstasy”) and MIDI (the basis for electronica) together spawned the unique rave culture of the 1990s. England, Germany, and Holland began tinkering with imported Detroit techno and Chicago house music in the late 1980s, and when ecstasy was added to the mix in British clubs, a new music subculture was born. A longtime writer on the music beat, Reynolds started watching—and partaking in—the rave scene early on, observing firsthand ecstasy’s sense-heightening and serotonin-surging effects on the music and the scene. In telling the story, Reynolds goes way beyond straight music history, mixing social history, interviews with participants and scene-makers, and his own analysis of the sounds with the names of key places, tracks, groups, scenes, and artists. He delves deep into the panoply of rave-worthy drugs and proper rave attitude and etiquette, exposing a nuanced musical phenomenon. Read on, and learn why nitrous oxide is called “hippy crack.”

Making Music Dennis DeSantis,2015

Playing with Something that Runs Mark Jonathan Butler,2014 The DJs and laptop performers of electronic dance music use preexistent elements such as records and digital samples to create extended improvisations. Analysis of these technologically mediated performances reveals a complex dynamic in which a modular approach to musical structure enables flexible adaptation and transformation of seemingly 'fixed' products in live contexts. This book covers the following topics: ontology; interface design and liveness in performance; the interaction of the preexistent and the novel within improvisation; and musical design as performative technology.

The Secrets of House Music Production Marc Adamo,2010 A guide to producing cutting-edge house music, covering making beats, drum sounds, basslines, remixes, instrumentals, FX, and more. Includes a CD with more than 300 audio samples.

The Techno-Apparatus of Bodily Production Josef Barla,2019-02-28 What if the terms technology and the body did not refer to distinct phenomena interacting in one way or another? What if we understood their relationship as far more intimate - technologies as always already embodied, material bodies as always already technologized? What would it mean, then, to understand the relationship between technology and the body as a relation of indeterminacy? Expanding on the concept of the apparatus of bodily production in the work of Donna Haraway and Karen Barad, Josef Barla explores how material bodies along with their boundaries, properties, and meanings performatively materialize at sites where technological, biological, technoscientific, (bio-)political, and economic forces intra-act.

Techno-Vernacular Creativity and Innovation Nettrice R. Gaskins,2021-08-10 A novel approach to STEAM learning that engages students from historically marginalized communities in culturally relevant and inclusive maker education. The growing maker movement in education has become an integral part of both STEM and STEAM learning, tapping into the natural DIY inclinations of creative people as well as the educational power of inventing or making things. And yet African American, Latino/a American, and Indigenous people are underrepresented in maker culture and education. In this book, Nettrice Gaskins proposes a novel approach to STEAM learning that engages students from historically marginalized communities in culturally relevant and inclusive maker education. Techno-vernacular creativity (TVC) connects technical literacy, equity, and culture, encompassing creative innovations produced by ethnic groups that are often overlooked. TVC uses three main modes of activity: reappropriation, remixing, and improvisation. Gaskins looks at each of the three modes in turn, guiding readers from research into practice. Drawing on real-world examples, she shows how TVC creates dynamic learning environments where underrepresented ethnic students feel that they belong. Students who remix computationally, for instance, have larger toolkits of computational skills with which to connect cultural practices to STEAM subjects; reappropriation offers a way to navigate cultural repertoires; improvisation is firmly rooted in cultural and creative practices. Finally, Gaskins explores an equity-oriented approach that makes a distinction between conventional or dominant pedagogical approaches and culturally relevant or responsive making methods and practices. She describes TVC habits of mind and suggests methods of instructions and projects.

Live Wires Dan Warner,2017-10-15 We live in an electronic world, saturated with electronic sounds. Yet, electronic sounds aren’t a new phenomenon; they have long permeated our sonic landscape. What began as the otherworldly sounds of the film score for the 1956 film *Forbidden Planet* and the rarefied, new timbres of Stockhausen’s *Kontakte* a few years later, is now a common soundscape in technology, media, and an array of musical genres and subgenres. More people than ever before can produce and listen to electronic music, from isolated experimenters, classical and jazz musicians, to rock musicians, sound recordists, and the newer generations of electronic musicians making hip-hop, house, techno, and ambient music. Increasingly we are listening to electronic sounds, finding new meanings in them, experimenting with them, and rehearing them as listeners and makers. *Live Wires* explores how five key electronic technologies—the tape recorder, circuit, computer, microphone, and turntable—revolutionized musical thought. Featuring the work of major figures in electronic music—including everyone from Schaeffer, Varèse, Xenakis, Babbitt, and Oliveros to Eno, Keith Emerson, Grandmaster Flash, Juan Atkins, and Holly Herndon—*Live Wires* is an arresting discussion of the powerful musical ideas that are being recycled, rethought, and remixed by the most interesting electronic composers and musicians today.

Music Theory for Computer Musicians Michael Hewitt,2008 Many DJs, gigging musicians, and electronic music producers understand how to play their instruments or make music on the computer, but they lack the basic knowledge of music theory needed to take their music-making to the next level and compose truly professional tracks. Concepts are taught using the MIDI keyboard environment and today's computer composing and recording software. By reading this book and following the exercises contained within it, you, the aspiring music producer/computer musician, will find yourself making great progress toward understanding and using these fundamentals of the music language. The result will be a great improvement in your ability to write and produce your own original music!
