*Poor Law to Poverty Program* Samuel Mencher,1968-01-15 The welfare state is a pervasive and controversial aspect of contemporary society. Samuel Mencher provides a historical and philosophical background on the growth of welfare policy through its sources, concepts, and specific programs. He covers a period from the English Poor Law of the sixteenth century through contemporary times-viewing changing attitudes toward poverty, new concepts on the nature of man and the influence of scientific thought-and also discusses mercantilism, laissez-faire, utilitarianism, liberalism, socialism, romanticism, social Darwinism, and modern capitalism as major influences on the growth of economic security policy.

**Development Economics** Alain de Janvry,Elisabeth Sadoulet,2015-12-22 Development Economics: Theory and Practice provides students and practitioners with the perspectives and the tools they need to think analytically and critically about the current major economic development issues in the world. Alain de Janvry and Elisabeth Sadoulet identify seven key dimensions of development; growth, poverty, vulnerability, inequality, basic needs, sustainability, and quality of life, and use them to structure the contents of the text. This book gives a historical perspective on the evolution of thought in development. It uses theory and empirical analysis to present readers with a full picture of how development works, how its successes and failures can be assessed, and how alternatives can be introduced. The authors demonstrate how diagnostics, design of programs and policies, and impact evaluation can be used to seek new solutions to the suffering and violence caused by development failures. This text is fully engaged with the most cutting edge research in the field, and equips readers with analytical tools for the impact evaluation of development programs and policies, illustrated with numerous examples. It is underpinned throughout by a wealth of student-friendly features including case studies, quantitative problem sets, end-of-chapter questions, and extensive references. This unique text aims at helping readers learn about development, think analytically about achievements and alternative options, and be prepared to compete on the development job market.

Land Quality, Agricultural Productivity, and Food Security Keith Daniel Wiebe,2003-01-01 'Action is needed to fight poverty by sustaining the environment and the use of natural resources. Land Quality, Agricultural Productivity, and Food Security explores a range of factors driving food security. The book offers an assessment to link quality of the available land resources with productivity of land and the ability to ensure food security.

It offers a mixture of broad-scale assessments across the globe, with detailed case studies, deepening our understanding of economics and decision-making mechanisms. It is recommended to researchers, as well as actors in the private and public domain, who are keen to improve their understanding of the appropriate actions that ensure food security in the decade to come.' - Floor Brouwer, Agricultural Economics Research Institute (LEI), The Hague, The Netherlands Land quality and land degradation affect agricultural productivity and food security, but quantifying these relationships has been difficult. Data are extremely limited and outcomes are sensitive to the choices that farmers make. The contributors to this book - including soil scientists, geographers, and economists - analyse data on soils, climate, land cover, agricultural inputs and outputs, and a variety of socio-economic factors to provide new insights into three key issues: \* the extent to which differences in land quality generate differences in agricultural productivity across countries \* how farmers' responses to differences or changes in land quality are influenced by economic, environmental, and institutional factors, and \* whether land degradation over time threatens productivity growth and food security at local, regional, and global levels.

**The Biology of Frankia and Actinorhizal Plants** Christa R. Schwintzer, 2012-12-02 The Biology of Frankia and Actinorhizal Plants provides a comprehensive review of Frankia and the actinorhizal plants. It reviews the state of knowledge on all aspects from molecular genetics through ecology to practical applications; describes methods used in research and practical applications; and is a guide to the literature. The book begins with overviews of Frankia and the actinorhizal plants, and developments in the field prior to the first confirmed isolation of Frankia. Next is a series of authoritative chapters on the biology of Frankia, the symbiosis, and actinorhizal plants. Although methods used in research and in practical applications are included throughout the book, they are given special emphasis in the middle section. The final section of the book concerns the ecology and current and potential uses of actinorhizal plants in both the temperate regions and the tropics. This work is intended as a reference text and handbook of methods for a wide audience including established workers and students of Frankia and actinorhizal plants, specialists and students in other areas of nitrogen fixation (including the Rhizobium-legume symbiosis), soil microbiologists, plant physiologists, ecologists, general biologists, foresters,

specialists in land reclamation, and managers requiring an authoritative overview of this rapidly developing field.

Science Dynamics and Research Production Nikolay K. Vitanov, 2016-08-01 This book deals with methods to evaluate scientific productivity. In the book statistical methods, deterministic and stochastic models and numerous indexes are discussed that will help the reader to understand the nonlinear science dynamics and to be able to develop or construct systems for appropriate evaluation of research productivity and management of research groups and organizations. The dynamics of science structures and systems is complex, and the evaluation of research productivity requires a combination of qualitative and quantitative methods and measures. The book has three parts. The first part is devoted to mathematical models describing the importance of science for economic growth and systems for the evaluation of research organizations of different size. The second part contains descriptions and discussions of numerous indexes for the evaluation of the productivity of researchers and groups of researchers of different size (up to the comparison of research productivities of research communities of nations). Part three contains discussions of non-Gaussian laws connected to scientific productivity and presents various deterministic and stochastic models of science dynamics and research productivity. The book shows that many famous fat tail distributions as well as many deterministic and stochastic models and processes, which are well known from physics, theory of extreme events or population dynamics, occur also in the description of dynamics of scientific systems and in the description of the characteristics of research productivity. This is not a surprise as scientific systems are nonlinear, open and dissipative.

Software Engineering for Science Jeffrey C. Carver, Neil P. Chue Hong, George K. Thiruvathukal, 2016-11-03 Software Engineering for Science provides an in-depth collection of peer-reviewed chapters that describe experiences with applying software engineering practices to the development of scientific software. It provides a better understanding of how software engineering is and should be practiced, and which software engineering practices are effective for scientific software. The book starts with a detailed overview of the Scientific Software Lifecycle, and a general overview of the scientific software development process. It highlights key issues commonly arising during scientific software development, as well as solutions to these problems. The second part of the book provides examples of the use of testing in scientific software development, including key issues and challenges. The chapters then describe solutions and case studies aimed at applying testing to scientific software development efforts. The final part of the book provides examples of applying software engineering techniques to scientific software, including not only computational modeling, but also software for data management and analysis. The authors describe their experiences and lessons learned from developing complex scientific software in different domains. About the Editors Jeffrey Carver is an Associate Professor in the Department of Computer Science at the University of Alabama. He is one of the primary organizers of the workshop series on Software Engineering for Science (<http://www.SE4Science.org/workshops>). Neil P. Chue Hong is Director of the Software Sustainability Institute at the University of Edinburgh. His research interests include barriers and incentives in research

software ecosystems and the role of software as a research object. George K. Thiruvathukal is Professor of Computer Science at Loyola University Chicago and Visiting Faculty at Argonne National Laboratory. His current research is focused on software metrics in open source mathematical and scientific software.

*The Oxford Handbook of Creative Industries* Candace Jones, Mark Lorenzen, Jonathan Sapsed, 2015-07-23 The Oxford Handbook of Creative Industries is a reference work, bringing together many of the world's leading scholars in the application of creativity in economics, business and management, law, policy studies, organization studies, and psychology. Creative industries research has become a regular theme in academic journals and conferences across these subjects and is also an important agenda for governments throughout the world, while business people from established companies and entrepreneurs reevaluate and innovate their models in creative industries. The Handbook is organized into four parts: Following the editors' introduction, Part One on Creativity includes individual creativity and how this scales up to teams, social networks, cities, and labour markets. Part Two addresses Generating and Appropriating Value from Creativity, as achieved by agents and organizations, such as entrepreneurs, stars and markets for symbolic goods, and considers how performance is measured in the creative industries. Part Three covers the mechanics of Managing and Organizing Creative Industries, with chapters on the role of brokerage and mediation in creative industry networks, disintermediation and glocalisation due to digital technology, the management of project-based organizations in creative industries, organizing events in creative fields, project ecologies, Global Production Networks, genres and classification and sunk costs and dynamics of creative industries. Part Four on Creative Industries, Culture and the Economy offers chapters on cultural change and entrepreneurship, on development, on copyright, economic spillovers and government policy. This authoritative collection is the most comprehensive source of the state of knowledge in the increasingly important field of creative industries research. Covering emerging economies and new technologies, it will be of interest to scholars and students of the arts, business, innovation, and policy.

*ReORIENT* Andre Gunder Frank, 1998-07-31 Andre Gunder Frank asks us to ReOrient our views away from Eurocentrism—to see the rise of the West as a mere blip in what was, and is again becoming, an Asia-centered world. In a bold challenge to received historiography and social theory he turns on its head the world according to Marx, Weber, and other theorists, including Polanyi, Rostow, Braudel, and Wallerstein. Frank explains the Rise of the West in world economic and demographic terms that relate it in a single historical sweep to the decline of the East around 1800. European states, he says, used the silver extracted from the American colonies to buy entry into an expanding Asian market that already flourished in the global economy. Resorting to import substitution and export promotion in the world market, they became Newly Industrializing Economies and tipped the global economic balance to the West. That is precisely what East Asia is doing today, Frank points out, to recover its traditional dominance. As a result, the center of the world economy is once again moving to the Middle Kingdom of China. Anyone interested in Asia, in world systems and world economic and social history, in international relations, and

in comparative area studies, will have to take into account Frank's exciting reassessment of our global economic past and future.

*Solar Energy* Gerard M Crawley, 2016-04-14 Concerns about energy resources and the environmental impact of energy use will continue to be important globally. **Contemporary Catholic Health Care Ethics, Second Edition** David F. Kelly, Gerard Magill, Henk ten Have, 2013-03-28 Contemporary Catholic Health Care Ethics, Second Edition, integrates theology, methodology, and practical application into a detailed and practical examination of the bioethical issues that confront students, scholars, and practitioners. Noted bioethicists Gerard Magill, Henk ten Have, and David F. Kelly contribute diverse backgrounds and experience that inform the richness of new material covered in this second edition. The book is organized into three sections: theology (basic issues underlying Catholic thought), methodology (how Catholic theology approaches moral issues, including birth control), and applications to current issues. New chapters discuss controversial end-of-life issues such as forgoing treatment, killing versus allowing patients to die, ways to handle decisions for incompetent patients, advance directives, and physician-assisted suicide. Unlike anthologies, the coherent text offers a consistent method in order to provide students, scholars, and practitioners with an understanding of ethical dilemmas as well as concrete examples to assist in the difficult decisions they must make on an everyday basis.
