

Profile Manager

Mika Klemettinen

Managing iOS Devices with OS X Lion Server Arek Dreyer, 2011-08-19 Learn how to use Profile Manager, a feature included in OS X Lion Server, to configure and remotely manage iOS devices (including iPad, iPhone, and iPod touch) and Macs running Lion. With this eBook, you will learn how to use Profile Manager's web-based tools to configure user settings for services such as Mail, Calendar, VPN, and Wi-Fi; define passcode settings to prevent unauthorized access to data stored on your users' devices; and remotely wipe devices if they go missing. The Profile Manager uses the Apple Push Notification Service (APNS), so you can immediately push configuration changes to your devices, as long as they have some kind of network connectivity. Why do all the work yourself? Show your users how easy it is for them to use the self-service web portal to download and install the configuration profiles you've carefully crafted for them, and how to remotely lock or wipe their own devices without your intervention. This eBook includes the knowledge you need to configure your Lion Server to be an Open Directory master, use an appropriate SSL certificate, provide Profile Manager services, and perform basic troubleshooting.

Managing Apple Devices Arek Dreyer, Kevin M. White, 2014-09-16 Managing Apple Devices covers a wide range of technologies that help you manage both iOS and OS X devices. This guide will teach you to formulate an effective plan for deploying and maintaining groups of Apple devices using iOS 7 and OS X Mavericks. You will be introduced to a variety of Apple management technologies including Mobile Device Management, the Volume Purchase Program, and the Device Enrollment Program. You will learn the theory behind these tools and may work through practical exercises that teach you to use the tools. For example, not only will you learn how to use Profile Manager—Apple's implementation of Mobile Device Management—but you will also learn about the ideas behind profile management, how to make configuration easier for both administrators and users while maintaining a highly secure environment. The exercises contained within this guide are designed to let you explore and learn the tools provided by Apple for deploying and managing iOS and OS X systems. These exercises move along in a somewhat linear fashion, starting with verification of access to necessary services, moving on to the configuration of those services, and finally testing the results of those services on client devices. Each subsequent lesson and exercises can be seen as building on previous topics, with more advanced topics towards the end of the guide. Each lesson in this guide is designed to give technical coordinators and system administrators the skills, tools, and knowledge to deploy and maintain Apple devices by:

- Providing knowledge of how Apple deployment technologies work
- Showing how to use specific deployment tools
- Explaining deployment procedures and best practices
- Offering practical exercises step-by-step solutions available

Recommendations: The world needs a book like this. The authors convey not only the nuts-and-bolts of how Apple's tools work but also the philosophy behind the tools. This is essential reading for anyone coming to the Apple world from other platforms. We do things differently over here and understanding the philosophy is every bit as important - perhaps more so - than knowing which buttons to press. I commend this book to anyone starting or modernising an Apple deployment.

Managing Information Highways Kim Berquist, 1996-11-19 This monograph constitutes the final report of the EC-sponsored PRISM project, which was devoted to communications management for integrated broadband communications (IBC) within the RACE program. The book introduces and applies the distributed management framework (DMF) developed for the specification and design of multi-domain management systems for controlling, monitoring, and administrating IBC networks. The DMF framework is evaluated in detail and related to other international architectural and specification work aimed at creating advanced communication management systems. Also, a summary of

existing platforms potentially supporting PRISM's DMF system, a glossary, a list of acronyms and abbreviations, and a detailed subject index are included.
