Large Scale Integrated Circuits Technology: State of the Art and Prospects Leo Esaki,G. Soncini,2012-12-06 A NATO Advanced Study Institute on Large Scale Integrated Circuits Technology: State of the Art and Prospects was held at Ettore Majorana Centre for Scientific Culture, Erice (Italy) on July 15-27, 1981, the first course of the International School of Solid-State Device Research. This volume contains the School Proceedings: fundamentals as well as up-to-date information on each subject presented by qualified authors. The material covered in this volume has been arranged in self-consistent chapters. Therefore, the Proceedings may be used as a suitable textbook or authoritative review for research workers and advanced students in the relevant field. The nascent information society is based on advanced technologies which will revolutionize human abilities to manipulate and communicate information. One of the most important underpinnings for developing such an information society lies in innovations in semiconductor microelectronics. Such innovations, indeed, are dramatically reducing the cost of transmitting, storing, and processing information with improved performance, ushering in an era characterized by large scale integration -the subject of this book.

Prospects for Managed Underground Storage of Recoverable Water National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Sustainable Underground Storage of Recoverable Water,2008-02-07 Growing demands for water in many parts of the nation are fueling the search for new approaches to sustainable water management, including how best to store water. Society has historically relied on dams and reservoirs, but problems such as high evaporation rates and a lack of suitable land for dam construction are driving interest in the prospect of storing water underground. Managed underground storage should be considered a valuable tool in a water manager's portfolio, although it poses its own unique challenges that need to be addressed through research and regulatory measures.

Wireless Technology Prospects and Policy Options National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on Wireless Technology Prospects and Policy Options,2011-03-24 The use of radio-frequency communication-commonly referred to as wireless communication-is becoming more pervasive as well as more economically and socially important. Technological progress over many decades has enabled the deployment of several successive generations of cellular telephone technology, which is now used by many billions of people worldwide; the near-universal addition of wireless local area networking to personal computers; and a proliferation of actual and proposed uses of wireless communications. The flood of new technologies, applications, and markets has also opened up opportunities for examining and adjusting the policy framework that currently governs the management and use of the spectrum and the institutions involved in it, and models for allocating spectrum and charging for it have come under increasing scrutiny. Yet even as many agree that further change to the policy framework is needed, there is debate about precisely how the overall framework should be changed, what trajectory its evolution should follow, and how dramatic or rapid the change should be. Many groups have opinions, positions, demands, and desires related to these questions-reflecting multiple commercial, social, and political agendas and a mix of technical, economic, and social perspectives. The development of technologies and associated policy and regulatory regimes are often closely coupled, an interplay apparent as early as the 1910s, when spectrum policy emerged in response to the growth of radio communications. As outlined in this report, current and ongoing technological advances suggest the need for a careful reassessment of the assumptions that inform spectrum policy in the United States today. This book seeks to shine a spotlight on 21st-century technology trends and to outline the implications of emerging technologies for spectrum management in ways that the committee hopes will be useful to those setting future spectrum policy.
