Biodiesel Meisam Tabatabaei,Mortaza Aghbashlo,2018-11-02 This book presents in-depth information on the state of the art of global biodiesel production and investigates its impact on climate change. Subsequently, it comprehensively discusses biodiesel production in terms of production systems (reactor technologies) as well as biodiesel purification and upgrading technologies. Moreover, the book reviews essential parameters in biodiesel production systems as well as major principles of operation, process control, and trouble-shooting in these systems. Conventional and emerging applications of biodiesel by-products with a view to further economize biodiesel production are also scrutinized. Separate chapters are dedicated to economic risk analysis and critical comparison of biodiesel production systems as well as techno-economical aspects of biodiesel plants. The book also thoroughly investigates the important aspects of biodiesel production and combustion by taking advantage of advanced sustainability analysis tools including life cycle assessment (LCA) and exergy techniques. In closing, the application of Omics technologies in biodiesel production is presented and discussed. This book is relevant to anyone with an interest in renewable, more sustainable fuel and energy solutions.

Cleaning-in-Place Adnan Y. Tamime,2008-05-19 This is the third edition of the Society of Dairy Technology's highly successful volume on Cleaning-in-Place (CIP). Already a well-established practice in dairy technology, CIP has become increasingly relevant in the processed food industry during the last 10-15 years, and the beverage industry has seen increased demands from customers regarding CIP verification and validation to provide improvements in plant hygiene and related efficiency. The book addresses the principles of cleaning operations, water supply issues and the science of detergents and disinfectants.

Aspects of equipment design relevant to ease of cleaning are covered in a special chapter, as is the assessment of cleaning efficiency and the management of cleaning operations. This third edition features for the first time a chapter on membrane cleaning - a relatively new area requiring very specialised cleaning products and procedures. Useful data on fluid flow dynamics and laboratory test methods are also included in separate chapters. Authors have been selected from within industry, allied suppliers and academia to provide a balanced, leading edge assessment of the subject matter. Cleaning-in-Place is directed at dairy scientists and technologists in industry and academia, general food scientists and food technologists, food microbiologists and equipment manufacturers.

MontiArc - Architectural Modeling and Simulation of Interactive Distributed Systems Arne Haber, 2016-09-02 Formal ADLs offer great potential to analyse the architecture of a system, predict the overall performance by using simulations, and allow to automatically generate parts of the implementation. Nevertheless, ADLs are rather not used in industrial practice since several problems hinder to exploit their potential to the full extend. This thesis elaborates the design of an ADL that copes with these impediments of ADLs in practice. Therefore, the design of a lightweight ADL is derived which also provides well defined extension points to be adapted to a certain domain or development process. Furthermore, it is investigated how architectural modeling can be enriched with agile development methods to support incremental modeling and the validation of system architectures. Therefore, a set detailed of requirements for architectural modeling and the simulation of system architectures is defined and MontiArc, a concrete ADL to model logical architectures of distributed, interactive systems, is derived. The language is based on the mathematical FOCUS [BS01] framework, which allows to simulate modeled systems in an event-based style. Code generators and a simulation framework provide means to continuously refine and test architectural models. To add new features or adapt the language to a new domain, a corresponding language extension method is presented to extend the syntax, language processing tools, and code generators of the ADL. A lightweight model library concept is presented which allows to develop and reuse component models and their implementation in a controlled and transparent way. The developed language, the simulator, and the language extension techniques have been examined in several case studies which either used or extended MontiArc.

HPLC Joel K. Swadesh, 2000-12-21 Product specifications, regulatory constraints, and tight production schedules impose considerable pressures on separation scientists in industry. The first edition of HPLC: Practical and Industrial Applications helped eliminate the need for extensive library or laboratory research when confronting a problem, an unfamiliar technique, or work in a new area. Its plain language, comprehensive coverage of separation topics, and practical organization made it an accessible and convenient reference manual for anyone working in or just entering the field. Since its publication in 1997, however, much has changed. The areas of mass spectroscopy, electrophoretic separations, and ultra-micro separations have blossomed, focus on quality control has intensified, and the literature has grown significantly. The Second Edition incorporates all of these changes and more. It is now fully current, with chapter supplements that include updated references and discussions of techniques. This book examines analytical HPLC as it is actually used in industry. Whether you are just entering industry, switching from one industry to another, or simply enjoy understanding how things are made, HPLC: Practical and Industrial Applications will help you solve problems and get up to speed in new areas quickly, comfortably, and with a genuine sense of mastery.

Molecular Catalysts for Energy Conversion Tatsuhiro Okada, Masao Kaneko, 2008-10-10 Over the past decade the topic of energy and environment has been

acknowledged among many people as a critical issue to be solved in 21st century since the Kyoto Protocol came into effect in 1997. Its political recognition was put forward especially at Heiligendamm in 2007, when the effect of carbon dioxide emission and its hazard in global climate were discussed and shared universally as common knowledge. Controlling the global warming in the economical framework of massive development worldwide through this new century is a very challenging problem not only among political, economical, or social circles but also among technological or scientific communities. As long as the humans depend on the combustion of fossil for energy resources, the waste heat exhaustion and CO emission are inevitable. In order to establish a new era of energy saving and environment benign society, which is supported by technologies and with social consensus, it is important to seek for a framework where new clean energy system is incorporated as infrastructure for industry and human activities. Such a society strongly needs innovative technologies of least CO emission and efficient energy conversion and utilization from remaining fossil energies on the Earth. Energy recycling system utilizing natural renewable energies and their conversion to hydrogen may be the most desirable option of future clean energy society. Thus the society should strive to change its energy basis, from fossil-consuming energy to clean and recycling energy.

Containment Systems Nigel Hirst, Mike Brocklebank, Martyn Ryder, 2002 As the manufacture of new toxic pharmaceutical products grows, it is necessary to handle more compounds of increasing toxicity in the workplace. For this reason, and because the expectation of better employee protection and improved working procedures is growing, there is an increasing demand for better containment systems and a better understanding of those systems.

The book is intended for academic researchers and independent experts studying the social and human aspects of the Fourth Industrial Revolution and the associated transition to the digital economy and Industry 4.0, as well as the creators of the legal framework for this process and its participants – entrepreneurs, managers, employees and consumers. It covers a variety of topics, including “intelligent” technologies and artificial intelligence, the digital economy, the social environment of the Fourth Industrial Revolution and its consequences for humans, the regulatory framework of the Fourth Industrial Revolution, and the

“green” consequences, prospects and financing of the Fourth Industrial Revolution.

Model-Oriented Design of Experiments Valerii V. Fedorov, Peter Hackl, 2012-12-06 Here, the authors explain the basic ideas so as to generate interest in modern problems of experimental design. The topics discussed include designs for inference based on nonlinear models, designs for models with random parameters and stochastic processes, designs for model discrimination and incorrectly specified (contaminated) models, as well as examples of designs in functional spaces. Since the authors avoid technical details, the book assumes only a moderate background in calculus, matrix algebra, and statistics. However, at many places, hints are given as to how readers may enhance and adopt the basic ideas for advanced problems or applications. This allows the book to be used for courses at different levels, as well as serving as a useful reference for graduate students and researchers in statistics and engineering.

History of Cartography Elri Liebenberg, Imre Josef Demhardt, 2012-01-05 This volume comprises the proceedings of the 2010 International Symposium of the ICA Commission on the History of Cartography. Apart from studies on general cartography, the volume, which reflects some co-operation with the ICA Commission on Maps and Society and the United States Geological Survey (USGS), contains regional studies on cartographic endeavours in Northern America, Brazil, and Southern Africa. The ICA Commission on Maps and Society participated as its field of study often overlaps with that of the ICA Commission on the History of Cartography. The USGS which is the official USA mapping organisation, was invited to emphasise that the ICA Commission on the History of Cartography is not only interested in historical maps, but also has as mandate the research and document the history of Geographical Information Science. Grease Lubrication in Rolling Bearings Piet M. Lugt, 2013-02-18 The definitive book on the science of grease lubrication for roller and needle bearings in industrial and vehicle engineering. Grease Lubrication in Rolling Bearings provides an overview of the existing knowledge on the various aspects of grease lubrication (including lubrication systems) and the state of the art models that exist today. The book reviews the physical and chemical aspects of grease lubrication, primarily directed towards lubrication of rolling bearings. The first part of the book covers grease composition, properties and rheology, including thermal and dynamics properties. Later chapters cover the dynamics of greased bearings, including grease life, bearing life, reliability and testing. The final chapter covers lubrications systems – the systems that deliver grease to the components requiring lubrication. Grease Lubrication in Rolling Bearings: Describes the underlying physical and chemical properties of grease. Discusses the effect of load, speed, temperature, bearing geometry, bearing materials and grease type on bearing wear. Covers both bearing and grease performance, including thermo-mechanical ageing and testing methodologies. It is intended for researchers and engineers in the petro-chemical and bearing industry, industries related to this (e.g. wind turbine industry, automotive industry) and for application engineers. It will also be of interest for teaching in post-graduate courses.
