It is considered to be a non-contagious genetic disease. It can be triggered by environmental factors or injury to the skin. There is no known cure for psoriasis, but certain measures can be taken for the control of symptoms, such as using immune system suppressing medications, steroid and vitamin D3 creams, and ultraviolet light exposure. Patients with psoriasis are at a high risk of developing psoriatic arthritis, Crohn's disease, lymphomas and depression. The objective of this book is to give a general view of psoriasis, its concerns and challenges. It brings forth some of the most innovative concepts and elucidates the unexplored aspects of psoriasis treatment and management.
