Mastering Purchasing Management for Inbound Supply Chains Thomas A. Cook, 2016-04-19 Importing finished products, components, and raw materials has become the status quo in today's increasingly competitive business landscape. The lessons of inbound supply, however, can be very costly if learned through a trial-and-error approach—especially foreign purchasing. By not understanding the parameters of landed costs alone, purchasing managers can cause serious and expensive disruptions to their supply chain. Leaving little to chance, Mastering Purchasing Management for Inbound Supply Chains details the fundamentals regarding logistics and compliance. It emphasizes the importance of bonded warehouses and cost modeling and presents case studies from a wide range of industries that illustrate best practices in imports, logistics, and landed cost modeling. International trade expert Thomas Cook provides valuable insights for avoiding common foreign trade zone pitfalls. He also explains the best ways to handle and minimize landed costs, including duties, shipping costs, and transfer pricing. This comprehensive purchasing guide covers the potential risks and complications involved with U.S. Customs (CBP), freight, INCO terms, and title and payment issues. Complete with a multitude of references to additional information in print and on the Web, the text provides the well-rounded understanding needed to avoid costly mistakes and make purchasing one of the strongest links in your global supply chain.

The Psychology of Illustration Harvey A. Houghton, Dale M. Willows, 2012-12-06 From the earliest stages of elementary school to the advanced college level, various types of illustrations are included in educational materials in order to promote learning. These illustrative adjuncts are often profuse and, in many cases, they may be the most striking feature that distinguishes one set of learning materials from another. In addition, the perceived effectiveness of the illustrations clearly plays an important role in the marketing of many educational materials. Despite this pervasiveness and salience in education, there has never been a systematic effort to bring together the results of research on illustrations in order to provide some level of guidance to the developers of commercial learning materials. There is, however, a considerable research literature that is directly relevant to this aspect of education. The purpose of the present two volume set is to summarize and interpret the existing research literature that deals with the various educational functions of illustrations. In undertaking to produce an omnibus reference work on psychological and instructional issues surrounding illustrated learning material, our paramount aim has been to stimulate closer collaboration between researchers, producers, and users of educational text. The problems associated with moving the findings of educational research into the realm of everyday practice have been perennial ones. While many researchers and practitioners are interested in fundamentally similar questions, they typically speak dissimilar languages, read different journals, and carry out their work under disparate ideologies.

Colour Terms in the Old Testament Athalya Brenner-Idan, 1983-02-01 The OT semantic field of 'colour' is presented as a coherent, interdependent, and graded linguistic structure. The relevant lexical items are organized under the following categories: primary (basic) terms; secondary and tertiary terms; terms for pigments, dyes, painting and paints; and terms for stains, speckles, and other phenomena related to colour. Proper names, and names of objects which carry 'colour' associations are discussed as well. Many OT texts are discussed in detail. Finally, the OT colour field is compared to its Mishnaic Hebrew counterpart, and an Appendix dealing with the renewal of the same lexical sector within modern spoken Hebrew brings the study up to the present.
