Cyber-Archaeology and Grand Narratives Thomas E. Levy, Ian W. N. Jones, 2017-11-21

This volume asks how the current Information Technology Revolution influences archaeological interpretations of techno-social change. Does cyber-archaeology provide a way to breathe new life into grand narratives of technological revolution and culture change, or does it further challenge these high-level theoretical explanations? Do digital recording methods have the potential to create large, regional-scale databases to ease investigation of high-level theoretical issues, or have they simply exposed deeper issues of archaeological practice that prevent this? In short, this volume cuts beyond platitudes about the revolutionary potential of the Information Technology Revolution and instead critically engages both its possibilities and limitations. The contributions to this volume are drawn from long-term regional studies employing a cyber-archaeology framework, primarily in the southern Levant, a region with rich archaeological data sets spanning the Paleolithic to the present day. As such, contributors are uniquely placed to comment on the interface between digital methods and grand narratives of long-term techno-social change. *Cyber-Archaeology and Grand Narratives* provides a much-needed challenge to current approaches, and a first step toward integrating innovative digital methods with archaeological theory.

**Managing Events** Liz Quick, 2020-08-17 Combining the practical and academic aspects of event management this text presents an industry perspective, with real-life event examples and contemporary and relevant case studies. It provides lecturers with a

useful platform to integrate key event topics into the learning environment. The book discusses the management process throughout the 'event cycle', from the pre-event planning stage; on-site delivery to the post event stage. The book is divided into 4 distinct phases, which are: The Event cycle; Before the event; Throughout the event and Beyond the event. Within each of these 4 sections, there are 2 or 3 separate chapters, each with their own objectives. The book discusses practical and operational elements, such as project management, marketing, sponsorship deals and risk assessment, that need to be put in place both before and during the event. The final section: Beyond the event, examines current and future event trends and issues, and discusses the various career paths that exist and the skills and qualifications required to gain employment and start a successful career in events. Each chapter profiles someone currently working within the events industry, and presents a scenario of a real event challenge they have faced in their work role, relevant to the chapter. Further viewpoints from a second event practitioner and academic are included, before the final outcome is presented, showing us in each case, how real life situations develop and are resolved in practice within the events industry. The feature Event Ethics explores a topical issue that should encourage lively discussion and the Did you know? section reveals an interesting and chapter-specific event fact. At the end of every chapter students can revise and extend their event knowledge with the list of Chapter Summary Questions, which help consolidate the learning outcomes. Additionally the Key Terms section explains any terminology used within the chapter. Each chapter concludes with a section called For the Classroom, featuring discussion points and activities based around the chapter content, as well as reference

sources and suggested reading. Some of the forms and inserts used to contextualise the learning, will appear as weblinks for the students to download and use throughout.

Water Quality Modelling for Rivers and Streams Marcello Benedini,George Tsakiris,2013-02-11 The main objective of the Water Framework Directive in the European countries is to achieve a “good status” of all the water bodies, in the integrated management of river basins. In order to assess the impact of improvement measures, water quality models are necessary. During the previous decades the progress in computer technology and computational methods has supported the development of advanced mathematical models for pollutant transport in rivers and streams. This book is intended to provide the fundamental knowledge needed for a deeper understanding of these models and the development of new ones, which will fulfil future quality requirements in water resources management. This book focuses on the fundamentals of computational techniques required in water quality modelling. Advection, dispersion and concentrated sources or sinks of contaminants lead to the formulation of the fundamental differential equation of pollutant transport. Its integration, according to appropriate initial and boundary conditions and with the knowledge of the velocity field, allows for pollutant behaviour to be assessed in the entire water body. An analytical integration is convenient only in one-dimensional approach with considerable simplification. Integration in the numerical field is useful for taking into account particular aspects of water body and pollutants. To ensure their reliability, the models require accurate calibration and

validation, based on proper data, taken from direct measurements. In addition, sensitivity and uncertainty analysis are also of utmost importance. All the above items are discussed in detail in the 21 chapters of the book, which is written in a didactic form for professionals and students.

### **Global Events and Event Stratigraphy in the Phanerozoic** Otto H.

Walliser, 2012-12-06 The existence of rapid and even catastrophic turnovers within the Phanerozoic ecosystems has been discussed controversially for more than 170 years. Since 1980 this discussion has become even more intensive after the hypothesis of Alvarez, explaining the end-Cretaceous mass extinction as the result of a huge asteroid impact on the Earth. This theory stimulated several thousand papers and is still controversial. The international research programme on Global Biological Events in Earth History attempts to bring the discussion back to the facts by using multidisciplinary investigations of the major Phanerozoic events. The results of an international group of experts are presented giving a wealth of information and a thorough discussion of the causes of the various global events.
