Fast-Forwarding with Audiovisual Translation Jorge Díaz Cintas,Kristijan Nikolić,2017-12-14 This edited collection offers a rounded vision of some of the ways in which audiovisual translation (AVT) can be approached from an academic, professional and educational point of view. The studies provide a stimulating and thought-provoking account of some of the most representative themes that are currently being researched in the field of AVT, while also highlighting new directions of potential research from a cognitive perspective. A conscious effort has been made to cover not only cultural and linguistic approaches to traditional domains of AVT (such as dubbing and subtitling), but also to look into lesser known areas of research that are attracting substantial interest from various stakeholders and gradually becoming part of the remit of AVT (including subtitling for the deaf and audio description for the blind). In this respect, the chapters of this book tackle the field of AVT from a plural, comprehensive and up-to-date perspective; speak of a rich and complex academic subject in the making; broaden our existing knowledge on AVT; reflect the many crossroads and junctions it currently faces and outline some of the issues that will become topical in the near future in this fascinating, flourishing discipline.

“I Don’t Translate, I Create!” An On-line Survey on Uniformity Versus Creativity in Professional Translations Vanessa Drexler, 2016-07 “I don’t translate, I create!” – This is the slogan of a translation agency called “Sternkopf Communications” located in Flöha, Germany. The translators at this translation agency are specialized in the field of marketing and perceive creativeness their daily bread. But what does this actually mean – I don’t translate, I create? Undoubtedly, the translation of a text from one language into another is not an easy and straightforward process. On the contrary, the translator needs to invest much time and one or the other headache before a target text (TT) finally sounds natural, fluent, coherent and logical for the target audience. Different possible translation solutions will have to be considered, language as well as culture-related equivalents often are not easily at hand etc. Would it not be pleasant if machine translation (MT) was there to help with this process? Nevertheless, as promising as this may sound, no machine or software developed so far is able to independently produce TTs meeting the standards of marketable translations, despite copious efforts to do so. This just goes to show how important the human capacity of creativity in language and text production is for the translation process. Without human creative thinking, TTs would, in fact, truly only read like translations, i.e. mechanical reproductions of the source text (ST) in a different code, rather than natural texts in their own right. Good translations, however, distinguish themselves by not revealing their readership that they are “merely” renderings of the original text. Hence, a slogan such as “I don’t translate, I create”, emphasizes the effort that is put into the translation process quite well, making the customers of Sternkopf Communications instantly aware of the fact that their texts are in good hands and will eventually not read like mechanical translations but as if they were well-composed originals. Yet, despite the enormous importance of creativity in translating, computer-aided translation (CAT) tools are being used frequently by professional translators, not to replace but to support the translator in their daily business. From the 1990s onwards, using CAT tools has been becoming increasingly popular for the following reason: They are said to help translators to achieve faster turnaround times by storing completed translations in a translation memory TM. In so doing, CAT tools enable their users to translate in a more consistent way, since they search source texts for words, phrases or sentences that have already been translated before and stored in the TM so that the translator does not need to translate this text unit again ‘from scratch’. Accordingly, this paper pursues two related purposes. The first is to compare the different CAT tools in their degree of usability to gain an impression of which of these translation memory solutions is perceived to meet translators’ technological requirements best. The second purpose is to identify translators’ perspectives on uniformity and creativity in translations with the goal to shedding light on the question whether CAT tools generally tend to positively or negatively influence the translation process on a rather linguistic than technological basis.

Translation Mildred L. Larson, 1991-01-01 This book is a collection of articles which highlight the fact that good translation theory is based on information gained from practice. At the same time, good practice is based on carefully worked-out theory. The two are interdependent. The authors who have contributed are persons who know the importance of both theory and practice and the tension between the two. They are not only translators but also have long experience in training others. The articles cover a wide variety of topics grouped in five sections. The first presents four graphic descriptions of what happens when one translates. The second looks at aspects of the application of theory from the backgrounds of European and Asian translation practices. The third has excellent articles which apply theory to the fields of poetry, opera, drama, and humor. The fourth section provides four ways of putting theory into practice. The fifth gives language specific examples and the

last section deals with the application of theory and practice to teaching in an academic context.

Introduction to Google Translate Gilad James, PhD, Google Translate is a multilingual translation service provided by Google. It allows users to translate words, phrases, and entire documents between multiple languages. The service was launched in April 2006 and has since been constantly updated to provide more accurate translations. Initially offering translations in only two languages, Google Translate now supports over 100 languages. The translation process works by analyzing the text or document input by the user, breaking it up into smaller segments, and then using statistical algorithms to match these segments with translations from its database. Google Translate has been a helpful tool for people to communicate across different languages, whether it be for business or personal use. However, it must be noted that automated translations often carry a high risk of inaccuracies due to the complexities inherent in language and the nuances of different cultures and contexts. It is always recommended to use translations as a starting point, and then have a native speaker review and refine the language to ensure accuracy.
