*Developing Frontier Cities* Harvey Lithwick, Yehuda Gradus, 2013-04-17 The Unique Nature of Frontier Cities and their Development Challenge Harvey Lithwick and Yehuda Grad us The advent of government downsizing, and globalization has led to enormous competitive pressures as well as the opening of new opportunities. How cities in remote frontier areas might cope with what for them might appear to be a devastating challenge is the subject of this book. Our concern is with frontier cities in particular. In our earlier study, *Frontiers in Regional Development* (Rowman and Littlefield, 1996), we examined the distinction between frontiers and peripheries. The terms are often used interchangeably, but we believe that in fact, both in scholarly works and in popular usage, very different connotations are conveyed by these concepts. Frontiers evoke a strong positive image, of sparsely settled territories, offering challenges, adventure, unspoiled natural land scapes, and a different, and for many an attractive life style. Frontiers are lands of opportunity. Peripheries conjure up negative images, of inaccessibility, inadequate services and political and economic marginality. They are places to escape from, rather than frontiers, which is where people escape to. Peripheries are places of and for losers.

*Biotechnology of Lignocellulose* Hongzhang Chen, 2014-04-21 This book presents and summarizes the new thoughts, new methods and new achievements that have emerged in the biotechnology of lignocellulose in recent years. It proposes new concepts including the primary refining, fractionation, multi-level utilization and selective structural separation of lignocellulose, etc. By approaching lignocellulose as a multi-level resource, biotechnology could have a significant effect on ecological agriculture, bio-energy, the chemical and paper making industries, etc., ultimately establishing distinctive eco-industrial parks for lignocellulose. Additionally, this book provides systematic research methods for the biotechnology of lignocellulose including investigation methods for the primary refining of lignocellulose, for microbial degradation and enzymatic hydrolysis, for cellulose fermentation and for lignocellulose conversion processes. It offers an excellent reference work and guide for scientists engaging in research on lignocellulose. Dr. Hongzhang Chen is a Professor at the Institute of Process Engineering of the Chinese Academy of Sciences, Beijing, China.

**The 2011 Japan Earthquake and Tsunami: Reconstruction and Restoration** Vicente Santiago-Fandiño, Shinji Sato, Norio Maki, Kanako Iuchi, 2017-07-12 This book covers the restoration and reconstruction process and activities undertaken in Japan in the first five years since the 2011 Earthquake and Tsunami – a period widely considered to be the most intensive reconstruction phase within the 10-year restoration plan drawn up by the Japanese Government. The respective chapters explore technical, scientific, social and non-scientific (policy-related) aspects, including: reconstruction and restoration policies, infrastructure and designs for tsunami coastal defence, resilient urban areas and affected communities, housing and relocation schemes, disaster mitigation and evacuation measures, reactivation of the economy, revitalization of fisheries and coastal agriculture, and industry and tourism. The book also illustrates some of the achievements and failures in a broad range of projects and initiatives intended to address the above-mentioned issues, making it particularly relevant for experts, decision makers, students and other interested scholars.

Humble Masterpieces Paola Antonelli,2005-11-29 From M & Ms to Post-It Notes, a charming and insightful collection of design

marvels from everyday life, celebrated by the curator of the MoMA's department of architecture and design. Every day we use dozens of tiny objects, from Post-It notes to Band-Aids. If they work well, chances are we do not pay them much attention. But although modest in size and price, some of these objects are true masterpieces of the art of design. Paola Antonelli, curator of the Museum of Modern Art's Department of Design and Architecture, is a highly celebrated figure in the world of design (she was just ranked among the top 100 most powerful people in the world of art). Paola has long been passionate about the subject of everyday objects that are marvels of design. The response to her recent MoMA show, also called Humble Masterpieces, was electric. In addition to lively coverage in dozens of publications, the museum goes spread the word about the fun of learning about and nominating their own picks for humble masterpieces. Now, in this colorful visual feast, Antonelli chooses 100 fabulous objects, from Chupa Chup lollipops to Legos to Chopsticks and Scotch tape. Each object will be portrayed with a gorgeous close-up detail, a brisk and informative text on its origin and special design features, as well as a silhouette image of the object as we see it each day. Certain to appeal to a broad audience, and to lend itself to fun, creative promotional opportunities, Humble Masterpieces will celebrate the possibility of looking at our everyday lives in an all-new way.

Credit Nation Claire Priest, 2022-12-20 How American colonists laid the foundations of American capitalism with an economy built on credit Even before the United States became a country, laws prioritizing access to credit set colonial America apart from the rest of the world. Credit Nation examines how the drive to expand credit shaped property laws and legal institutions in the colonial and founding eras of the republic. In this major new history of early America, Claire Priest describes how the British Parliament departed from the customary ways that English law protected land and inheritance, enacting laws for the colonies that privileged creditors by defining land and slaves as commodities available to satisfy debts. Colonial governments, in turn, created local legal institutions that enabled people to further leverage their assets to obtain credit. Priest shows how loans backed with slaves as property fueled slavery from the colonial era through the Civil War, and that increased access to credit was key to the explosive growth of capitalism in nineteenth-century America. Credit Nation presents a new vision of American economic history, one where credit markets and liquidity were prioritized from the outset, where property rights and slaves became commodities for creditors' claims, and where legal institutions played a critical role in the Stamp Act crisis and other political episodes of the founding period.

Heating, Cooling, Lighting Norbert Lechner, 1991-01-16 Using a qualitative rather than a quantitative approach, presents detailed information based on concepts, rules, guidelines, intuition, and experience for architects in the areas of heating, cooling, and lighting at the schematic design stage. The data explored supports a three-tiered approach--load avoidance, using natural energy sources, and mechanical equipment. Among the topics covered are shading, thermal envelope, passive heating and cooling, electric lighting, and HVAC. Case studies illustrate how certain buildings use techniques at all three tiers for heating, cooling, and lighting. An appendix lists some of the more appropriate computer programs available to the architect for analysis at the schematic design stage.

**Concrete Microstructure** D. M. Roy, G. M. Idorn, 1993 Durability of concrete in highway systems is a problem of national concern. In order to better understand the mechanisms which intrinsically control durability in highway concrete, it is necessary to

define and understand those factors which impact concrete microstructure which is a consequence of both its formulation and the processes taking place during mixing, placing and curing. This report documents an investigation of those variables which control cement hydration and consequent microstructural development.
