Start Your Engines Jim Parker, 2005 Start Your Engines: Developing Driving and Racing Games is a unique book that will teach readers everything they need to set up different types of road conditions, create opponents, set up road hazards, generate weather conditions, manage collisions, and much more. Not only will readers end up with the knowledge and tools they need to create driving and racing games, they get a full-featured, playable racing game that they can expand and customize with the skills learned in the book. The book shows readers how to develop live-action, interactive racing games with a unique three-tiered approach. Readers will start off by learning how to build a model for a racing game and then apply the physics to create a simple 2D (flat) game while learning how to create a variety of vehicles, race opponents, and terrain. In tier two, readers learn how to go from 2D to 3D with the same game concepts illustrating how to take the same basic idea for a game (and gameplay) and use modeling tips and tricks to begin customizing features. In the final tier, the author takes the concepts of 3D driving games to Mars with data modeled from real Mars terrain. Readers will create a dune buggy race on the planet of Mars and learn to create cool racing action at a bizarre and treacherous location.

First to the Finish Chip Lovitt, 2004-08-31 This large gamebook includes five action-packed racing games, four race car playing pieces, and an electronic, race-car sound Randomizer module that serves as electronic dice. The books also feature four popular NASCAR drivers-four-time NASCAR champion Jeff Gordon, 2003 champion Matt Kenseth, 2002 champion Tony Stewart, and popular driver Rusty Wallace, so kids can pretend to be one of these drivers as they play the games. Each spread contains a racetrack layout or race-related grid and players use the Randomizer to move around the game boards. Games include a tri-oval racetrack (like the Daytona 500) path game, a triple-track, three-races-in-one game, a pit-stop challenge, and two other fun games. In addition, action photos of NASCAR races, cars, and drivers accompany each game board.

The Racing Game Marvin B. Scott, This study of a unique social world probes beneath the thrill and spectacle of

horse racing into the lives of the honest boys, the gyps, the manipulators, the stoops, and the Chalk eaters--the constituents of race track society and the players of the racing game. With scientific precision and journalistic vigor, Scott describes the everyday activities--the objectives and strategies--of those whose lives are organized around track proceedings and who compete with chance and one another. The players in the racing game range from track owners to stable boys, from law enforcers to lawbreakers, and from casual sportsmen to pathologically addicted gamblers. Considering the self-interests, the normative and operational codes, and the interactional relationships among the major types and subtypes of participants, the author defines the components of strategic movement within the framework of rules and resources to show how a player's relations to the means of production governs his behavior. The fruitful application of sociological theory and method to an unusually interesting social context makes this particularly useful still for courses in social problems and the sociology of organizations and of leisure. ...when he was teaching at Berkeley, Goffman asked me to come to his seminar to hear a student, Marvin Scott, present his research on horse racing. ...in the course of his presentation, Scott suggested in passing that gamblers, including horse players, sometimes had winning streaks' or losing streaks.' Goffman, who had been listening appreciatively until that point, interrupted to say that of course Scott meant that they thought they had such streaks of good or bad luck. But Scott said no, these were observable facts.' Goffman, unwilling to accept such supernatural talk, persisted, appealing to the laws of probability to assure Scott that such streaks' were natural occurrences in any long run of tries in such a game as blackjack or craps.-- Howard Becker Marvin B. Scott retired in 2001 as professor of sociology at Hunter College, City University of New York. He previously taught at San Francisco State College and received his Ph.D. in 1966 at the University of California, Berkeley. Jaime Suchlicki is Bacardi Professor of History at the Graduate School of International Studies at the University of Miami, and executive director of its Cuban-American and Cuban Center.

Game Preview Nicolae Sfetcu, 2014-05-04 A guide for game preview and rules: history, definitions, classification, theory, video game consoles, cheating, links, etc. While many different subdivisions have been proposed, anthropologists classify games under three major headings, and have drawn some conclusions as to the social bases that each sort of game requires. They divide games broadly into, games of pure skill, such as hopscotch and target shooting; games of pure strategy, such as checkers, go, or tic-tac-toe; and games of chance, such as craps and snakes and ladders. Video Games and the Mind Bernard Perron, Felix Schröter, 2016-06-30 Can a video game make you cry? Why do you relate to the characters and how do you engage with the storyworlds they inhabit? How is your body engaged in play? How are your actions guided by sociocultural norms and experiences? Questions like these address a core aspect of digital gaming--the video game experience itself--and are of interest to many game scholars and designers. With psychological theories of cognition, affect and emotion as reference points, this collection of new essays offers various perspectives on how players think and feel about video games and how game design and analysis can build on these processes.
