Microwave and Radio-Frequency Technologies in Agriculture Graham Brodie, Mohan V. Jacob, Peter Farrell, 2016-01-01 Humanity's ability to produce enough food is mostly due to adoption of new methods and technologies by the agricultural industries as they became available. New information, communication and high speed processing and precision agriculture

technologies have the potential to transform the agricultural industry. These technologies incorporate radio-frequency and microwave radiation into their systems. This book presents an overview of how these technologies are being used in agricultural systems. The main purpose of the book is to provide a glimpse of what is possible and encourage practitioners in the engineering and agricultural industries to explore how radio-frequency and microwave systems might further enhance the agricultural industry. The authors have extensive experience in agricultural and microwave engineering, instrumentation and communication systems.

**The One to Watch** Bruce Girard, 2003 The combination of the new information and communication technologies (ICTs) and radio is opening up a range of possibilities for communication in the developing world. Broadcasters who used to have to travel for hours to find a public library to research a programme, now have instant access to the internet, whilst national, regional and global radio news agencies are making world news and alternative perspectives available to even the most remote communities. These developments are also helping to keep communities together, despite the distances imposed by migration trends. The case studies in this book demonstrate the value of converging radio and new ITCs for development and suggest that radio will have even greater significance and value in the future. The book is based on the findings of a FAO international workshop, held in February 2001.
