Music Radio Morten Michelsen, Mads Krogh, Steen Kaargaard Nielsen, Iben

Have, 2018-12-27 Why is music so important to radio? This anthology explores the ways in which musical life and radio interact, overlap and have influenced each other for nearly a century. One of music radio's major functions is to help build smaller or larger communities by continuously offering broadcast music as a means to create identity and senses of belonging. Music radio also helps identify and develop musical genres in collaboration with listeners and the music industry by mediating and by gatekeeping. Focusing on music from around the world, Music Radio discusses what music radio is and why or for what purposes it is produced. Each essay illuminates the intricate cultural processes associated with music and radio and suggests ways of working with such complexities.

Post-Communism and the Media in Eastern Europe Patrick H. O'Neil, 2014-01-14 This investigation of the media in Poland, the Czech Republic, Slovakia, Hungary, Romania and Bulgaria, seeks to outline the legacies of communism confronting media reform, and how interaction between the media, state, society and market has led to the particular and unique dynamics in each case.

Media Revolution in Europe Karol Jakubowicz, 2011-01-01 The rags to riches story of Karol Jakubowicz's involvement in the work of the Council of Europe took him from the role of an awestruck newcomer from Poland in 1990 to that of the Chairman of the Steering Committee on the Media and New Communication Services (2005-06). Along the way, he was elected, delegated by the Steering Committee, and invited by the Council of Europe Secretariat to serve in a number of other capacities. In all of them, he contributed a wide variety of papers, reports and studies to assist the steering committee and other bodies in collecting information and formulating ideas in the general field of freedom of expression, creation of free and democratic media systems (including the issue of public service media), regulation of transfrontier television, the adjustment of Council of Europe human rights standards to the conditions of the information society, and the development of broadcasting legislation in Council of Europe member states. The present collection of these papers and reports is published in the conviction that they retain their value and relevance. It provides the additional benefit of offering a glimpse of the work preceding the formulation of Committee of Ministers recommendations and declarations, as well as resolutions of the Council of Europe Parliamentary Assembly.

Understanding World Media Dr Kumar Kaustubha, Dr Ajitabh & Mudita Agnihotri Sant, 2021-08-14 Understanding World Media sets out to mirror world media and the freedom it enjoyed across the globe in about 200 countries. While media is an important part of academic research, concerns have been raised globally on its content, intent and freedom of expression. To the extent that even as per the data compiled by Reporters Without Borders, democratic India ranks below par at 138 in the World Press Freedom Index 2018 out of the 180 listed nations. Though, it is a question of debate and discussions to what extent media in India is considered free or under censorship. When India is emerging as a global power with over 55 percent of its population is under 35 years of age, interest in the world community and media is growing leaps and bounds. It is in this context that this book magnifies its mirror to bring facts about the status and understanding of media in the world. For any book like this, it will always have its challenges to cover subjects like media in a nutshell, but for today, this book is timely and relevant. It is a balanced and thoughtful effort to present such a comprehensive book in a crisp and concise manner, as it is difficult to get experts on various countries to write on their respective domains. We have put our utmost effort to consolidate all necessary information and analysis required for this collection and we are very hopeful that it will serve its purpose, fulfill the void and information gap about the world media. Understanding

World Media is structured around two clear themes, the status of media in various countries and its freedom of expression. It is divided into five parts covering vast geographical areas in Asia, Europe, the Americas, Africa and Australia-Oceania.

Optimization Methods for User Admissions and Radio Resource Allocation for Multicasting over High Altitude Platforms Ibrahim, Ahmed,Alfa, Attahiru,2019-02-27 This book focuses on the issue of optimizing radio resource allocation (RRA) and user admission control (AC) for multiple multicasting sessions on a single high altitude platform (HAP) with multiple antennas on-board. HAPs are quasi-stationary aerial platforms that carry a wireless communications payload to provide wireless communications and broadband services. They are meant to be located in the stratosphere layer of the atmosphere at altitudes in the range 17-22 km and have the ability to fly on demand to temporarily or permanently serve regions with unavailable telecommunications infrastructure. An important requirement that the book focusses on is the development of an efficient and effective method for resource allocation and user admissions for HAPs, especially when it comes to multicasting. Power, frequency, space (antennas selection) and time (scheduling) are the resources considered in the problem over an orthogonal frequency division multiple access (OFDMA) HAP system. Due to the strong dependence of the total number of users that could join different multicast groups, on the possible ways we may allocate resources to these groups, it is of significant importance to consider a joint user to session assignments and RRA across the groups. From the service provider's point of view, it would be in its best interest to be able to admit as many higher priority users as possible, while satisfying their quality of service requirements. High priority users could be users subscribed in and paying higher for a service plan that gives them preference of admittance to receive more multicast transmissions, compared to those paying for a lower service plan. Also, the user who tries to join multiple multicast groups (i.e. receive more than one multicast transmission), would have preferences for which one he would favor to receive if resources are not enough to satisfy the QoS requirements. Technical topics discussed in the book include: Overview on High Altitude Platforms, their different types and the recent works in this areaRadio Resource Allocation and User Admission Control in HAPsMulticasting in a Single HAP System: System Model and Mathematical FormulationOptimization schemes that are designed to enhance the performance of a branch and bound technique by taking into account special mathematical structure in the problem formulation

Webcasting Worldwide Louisa S. Ha,Richard J. Ganahl,2013-03-07 Webcasting Worldwide tackles one of the most timely topics in mass communication today—the delivery of audio and video content via the Web, or webcasting—employing a global

perspective to explore the subject. It is unique in providing a theoretical framework by which to analyze business models of emerging media, and it also examines the business practices of leading webcasters in the world's most developed broadband markets. With webcasting in its early development, the approaches discussed in this volume set the standards for the webcasting industry. Representing the major broadband markets in the world, this text is an authoritative and valuable reference for both researchers and practitioners. The chapters relate the business practices of webcasting to the media market environment and established media industries, such as television and radio, as well as government and non-profit organizations. Downloadable resources offer PowerPoint charts for use in training, education, and research, along with tables, graphs, screenshots, and hyperlinks. Webcasting Worldwide is essential reading for academic researchers and media industry practitioners, and the volume will be a useful text in advanced courses addressing media technology, media management, and international communication. The BBC Asian Network Gurvinder Aujla-Sidhu,2021-04-19 This ground-breaking new book provides a unique, in-depth analysis of the BBC Asian Network, the BBC's national ethnic-specific digital radio station in the UK. Gurvinder Aujla-Sidhu offers an insight into the internal production culture at the radio station, revealing the challenges minority ethnic producers faced as they struggled to create a cohesive and distinct 'community of listeners'. Besides the differences of opinion that emerged within the inter-generational British Asian staff over how to address the audience's needs, the book also reveals the ways in which 'race' is managed by the BBC, and how the culture of managerialism permeates recruitment strategies, music playlists and mother tongue language programmes. In-depth interviews unveil how the BBC's 'gatekeeping' system limits the dissemination of original journalism about British Asian communities, through the marginalisation of the expertise of narratives created by the network's own minority ethnic journalists.

Communism, Capitalism and the Mass Media Colin Sparks,Anna Reading,1997-12-08 Colin Sparks provides a challenging reassessment of the impact of the collapse of communism on the media systems of Eastern Europe. He analyzes both the changes themselves and their implications for the ways in which we think about the mass media, while also demonstrating that most of the orthodox accounts of the end of communism are seriously flawed. There are much greater continuities between the old system and the new than are captured by the theories that argue that there has been a radical and fundamental change. Instead of marking the end of critical inquiry or the end of history, as some have suggested, Sparks argues that the collapse of the communist systems demonstrates how very limited and frequently incorrect the main ways of discussing the mass media are. He concludes with a provocative discussion of the ways in which we need to modify our thinking in the light of these developments.

Developments in Cognitive Radio Networks Bodhaswar TJ Maharaj,Babatunde Seun Awoyemi,2021-07-14 This book provides holistic yet concise information on what modern cognitive radio networks are, how they work, and the possible future directions for them. The authors first present the most generic models of modern cognitive radio networks, taking into consideration their different architectural designs and classifications. While the spectrum resource is shown to be the most important resource for the cognitive radio networks, the book exposes the importance of the other resources that are needed to help drive the technology. The book then discusses in-depth the key tools (such as optimization and queuing theory) and techniques (such as cooperative diversity and relaying) that are being employed to formulate resource problems, investigate solutions, and interpret such solutions for useful and practical modern cognitive radio networks realization. Further, the book studies the impact of modern cognitive radio networks on other emerging technologies -- such as 5G, Internet of Things, and advanced wireless sensor networks -- and discusses the role that cognitive radio networks play in the evolution of smart cities and in the realization of a highly interconnected world. In discussing the future of the cognitive radio networks, the book emphasizes the need to advance new or improved tools, techniques, and solutions to address lingering problems in the aspects of resource realization and utilization, network complexity, network security, etc., which can potentially limit the cognitive radio networks in their stride to becoming one of the most promising technologies for the immediate and near future.
