Radiophysical and Geomagnetic Effects of Rocket Burn and Launch in the Near-the-Earth Environment Leonid F. Chernogor, Nathan

Blaunstein, 2016-04-19 Radiophysical and Geomagnetic Effects of Rocket Burn and Launch in the Near-the-Earth Environment describes experimental and theoretical studies on the effects of rocket burns and launchings on the near-the-Earth environment and geomagnetic fields. It illuminates the main geophysical and radiophysical effects on the ionosphere and magnetosphere sur

The Rocket Team Frederick Ira Ordway (III), Mitchell R. Sharpe, 1982 From the V-2 to the Saturn moon rocket, this is the inside story of the von Braun team, a group whose experiments in pyrotechnics eventually changed the course of world history.

Smokin' Rockets Patrick Lucanio, Gary Coville, 2002-06-11 Science and technology had a significant influence on American culture and thought in the years immediately following World War II. The new wonders of science and the threat of the Soviet Union as a powerful new enemy made science fiction a popular genre in radio, television, and film. Mutant creatures spawned by radioactive energy and intergalactic dictators unleashing horrific weapons upon Earth were characteristic of science fiction at the time and served as warnings to the very real dangers posed by the atomic age. This work examines science and science fiction in American culture beginning in the year World War II ended and going to 1962, the year of John Glenn's orbital flight and the Cuban Missile Crisis. The radio work of Arch Oboler and the significance of his Rocket from Manhattan, which aired only one month after the dropping of the first atomic bomb and asked serious questions about the use of atomic energy, are examined. Other topics are the conflict between the free world and the Communist world in the context of science fiction plot lines, the dangers of science as shown in films like Godzilla, Them!, The Day the Earth Stood Still, and radio and television programs, the flying saucer phenomenon and the treatment of such stories in the media (with special attention given to the 1956 documentary UFO), the changing and more positive depictions of scientists, television programs like Flash Gordon and Space Patrol, the shift in the balance of world power due to the successful launching of Sputnik I by the Russians in 1957, the end of the world theme in science fiction, and the American journey into space.

Rocket Age George D. Morgan, 2020-06-09 Rocket Age traces the history of spaceflight innovation from Robert Goddard's early experiments with liquid fuel rockets, through World War II and the work of Wernher von Braun and his German engineers, on to the postwar improvements made by Sergei Korolev and his team in the Soviet Union, and culminating with the historic Moon walk made by Neil Armstrong and Buzz Aldrin on July 20, 1969. From designers to engineers, and even communication specialists and the builders who assembled these towering rockets, hundreds of thousands of people worked on getting humans to the Moon, yet only a few have been recognized for their contributions. George D. Morgan sets the record straight by giving these forgotten figures of space travel their due. The son of rocket scientists who worked directly on NASA projects Mercury, Gemini, and Apollo, Morgan gives behind-the-scenes details on the famous missions, including a rare interview with Dieter Huzel –Wernher von Braun's right-hand man and a chief engineer on every major manned space program. Even the most voracious readers of US space flight history will discover things in this book that they have never read before. Rocket Age shines a light on those that have for too long been left out of the picture of the race to land on the Moon.

Rocket to the Moon Erik Bergaust, E. W. Seabrook Hull, 1958 Two scientists explain how man will probably reach the moon, and why the project is important. They present arguments for an accelerated program.

Rocket Dreams Marina Benjamin, 2003-05-25 In 1958, mankind's centuries-long flirtation with space flight became a torrid love affair. For a decade, tens of millions of people were enraptured -- first, by the U.S.-Soviet race to the moon, and finally, as America outstripped its rival, by Project Apollo alone. It is now more than three decades since the last man walked on the moon...more time than between the first moonwalk and the beginning of World War II. Apollo did not, as had been promised by a generation of visionaries, herald the beginning of the Space Age, but its end. Or did it? Project Apollo, like a cannonball, reached its apogee and returned to earth, but the trajectory of that return was complex. America's atmosphere -- its economic, scientific, and cultural atmosphere -- made for a very complicated reentry that produced many solutions to the trajectory problem. Rocket Dreams is about those solutions...about the places where the space program landed. In Rocket Dreams, an extraordinarily talented young writer named Marina

Benjamin will take you on a journey to those landing sites. A visit with retired astronauts at a celebrity autograph show is a starting point down the divergent paths taken by the pioneers, including Edgar Mitchell, founder of the church of Noëtic Sciences. Roswell, New Mexico is a landing site of a different order, the magnetic north of UFO belief in the United States -- a belief that began its most dramatic growth precisely at the time that the path of the space program began its descent. In the vernacular, the third law of motion states that what goes up, must come down. Thus the tremendous motive force that energized the space program didn't just vanish; it was conserved and transformed, making bestsellers out of fantasy literature, spawning Gaia, and giving symbolism to the environmental movement. Everything from the pop cultural boom in ufology to the worldwide Search for Extra-Terrestrial Intelligence (SETI) feeds on the energy given off by America's leap toward space. *Rocket Dreams* is an eloquent tour of this Apollo-scarred landscape. It is also an introduction to some of the most fascinating characters imaginable: Some long dead, like the crackpot visionary Alfred Lawson, who saw in space flight a new stage of human evolution (Alti-Man), or Robert Goddard, the father of rocketry, whose workshop in Roswell stands only half a mile from shops selling posters of alien visitors. Others are very much alive -- like Stewart Brand, creator of the Whole Earth Catalog and partner with Gerard O'Neill in the drive to build free-floating space colonies, and SETI astronomer Seth Shostak, who has spent decades listening to the skies, hoping for the first contact with another intelligent species. Perceptive, original, and wonderfully written, informed by history, science, and an acute knowledge of popular culture, *Rocket Dreams* is a brilliant book by a remarkable talent.

The Rocket Men Rex Hall,Shayler David,2001-04-10 This book is the first known work in the west dedicated to revealing the full story of the Vostok

space missions, and the first fledgling steps off our planet. In *Leaving the Planet* authors Rex Hall and Dave Shayler review this Soviet demonstration of technological progress. The text examines both the developmental and operational aspects of the missions, which at the time were clouded in secrecy. This fascinating and important text features a significant amount of new material on the spacecraft, as well as the history, design and development of the launch vehicle. It also includes the full story of the men and women who trained for these missions, some of whom never flew.

The Secret War Brian Johnson, 2004-06-30 Originally a TV tie-in expanded from the BBC television series, the book covers the behind-the-scenes aspects of the fight by the 'back room' scientists and technicians of WW2, including the battles against the Luftwaffe navigational beams, the V-1 and V-2 flying bombs, the development of radar, the battle against the u-boats, countering the magnetic mine, and the breaking of the codes produced by the Enigma machines.

The History of Rockets Ron Miller, 1999 Surveys the invention, development, and different uses of rockets, from their beginnings in ancient Greece and China to modern efforts to explore outer space.

A New American Space Plan Travis S. Taylor, Stephanie Osborn, 2012-11-15 Meet the Rocket City Rednecks. They're five backwoods guys from the rocket city: Huntsville, Alabama, home to NASA's Marshall Space Flight Center and the birthplace of the U.S. space program. Sure, they love to shoot stuff and drink beer, and one of 'em lives in a trailer, but with a family tree full of NASA rocket scientists (not to mention their own PhDs and advanced degrees), they aim a little higher¾like using homemade moonshine to fuel a rocket! Now, in typical laidback style, Dr. Travis S. Taylor, leader of the crew, delivers the goods on how America can return to space exploration and manned space flight. What's needed is a good old try anything attitude, a bit of gumption, and the spectacularly entertaining backyard science that's the Rocket City Redneck specialty. At the publisher's request, this title is sold without DRM (Digital Rights Management).
