Smokin' Rockets Patrick Lucanio, Gary Coville, 2002-06-11

Science and technology had a significant influence on American culture and thought in the years immediately following World War II. The new wonders of science and the threat of the Soviet Union as a powerful new enemy made science fiction a popular genre in radio, television, and film. Mutant creatures spawned by radioactive energy and intergalactic dictators unleashing horrific weapons upon Earth were characteristic of science fiction at the time and served as warnings to the very real dangers posed by the atomic age. This work examines science and science fiction in American culture beginning in the year World War II ended and going to 1962, the year of John Glenn's orbital flight and the Cuban Missile Crisis. The radio work of Arch Oboler and the significance of his *Rocket from Manhattan*, which aired only one month after the dropping of the first atomic bomb and asked serious questions about the use of atomic energy, are examined. Other topics are the conflict between the free world and the Communist world in the context of science fiction plot lines, the dangers of science as shown in films like *Godzilla*, *Them!*, *The Day the Earth Stood Still*, and radio and television programs, the flying saucer phenomenon and the treatment of such stories in the media (with special attention given to the 1956 documentary *UFO*), the changing and more positive depictions of scientists, television programs like *Flash Gordon* and *Space Patrol*, the shift in the balance of world power due to the successful launching of *Sputnik I* by the Russians in 1957, the end of the world theme in science fiction, and the American journey into space.

Rocket Age George D. Morgan, 2020-06-09 *Rocket Age* traces the history of spaceflight innovation from Robert Goddard's early experiments with liquid fuel rockets, through World War II and the work of Wernher von Braun and his German engineers, on to

the postwar improvements made by Sergei Korolev and his team in the Soviet Union, and culminating with the historic Moon walk made by Neil Armstrong and Buzz Aldrin on July 20, 1969. From designers to engineers, and even communication specialists and the builders who assembled these towering rockets, hundreds of thousands of people worked on getting humans to the Moon, yet only a few have been recognized for their contributions. George D. Morgan sets the record straight by giving these forgotten figures of space travel their due. The son of rocket scientists who worked directly on NASA projects Mercury, Gemini, and Apollo, Morgan gives behind-the-scenes details on the famous missions, including a rare interview with Dieter Huzel -Wernher von Braun's right-hand man and a chief engineer on every major manned space program. Even the most voracious readers of US space flight history will discover things in this book that they have never read before. Rocket Age shines a light on those that have for too long been left out of the picture of the race to land on the Moon.

Rocket Measurements of the Upper Ionosphere by a Radio Propagation Technique S. J. Bauer, J. E. Jackson, 1962 High altitude measurements of the electron density distribution were performed well above the F2 peak of the ionosphere by using the twofrequency rocket-borne propagation experiment of Seddon. An example of a measurement of the electron density profile up to 620 km by means of the CW propagation technique is presented, including the inferred scale height and temperature of the upper ionosphere. For the anticipated measurements up to one earth radius by the CW propagation experiment, the variation of the ionosphere below a vehicle must always be considered to arrive at reliable local electron density data. A correction for this time variation can be made by using recorded information on the ordinary and extraordinary propagation modes at two harmonically related frequencies. This correction procedure is briefly outlined. (Author).

Rocket Ship Galileo Robert Anson Heinlein,1970 They called themselves the Galileo Club -- not a bad name for a group of space-minded young men who had high hopes of putting one of their homemade rocket ships in orbit. But it wasn't until they teamed up with Doc Cargraves that their impossible dream became an incredible reality. Suddenly the three Earthbound youths and their mentor were hurtling through space, heading for the barren wasteland of the Moon. Or so they thought. They were totally unaware that the dark crater shadows concealed a threat beyond their wildest imaginings . . . a threat from which only a miracle could save them!

Rockets and Missiles of Cape Canaveral Clifford Lethbridge,2017-08-20 Rockets and Missiles of Cape Canaveral is an easy-to-read reference book on the more than 130 rocket and missile variants that have launched from Cape Canaveral, Florida from 1950 to the present. Photos (color where available) are included along with a description of each variant.

Rocket Men Craig Nelson,2009-06-25 A New York Times Bestseller Celebrates a bold era when voyaging beyond the Earth was deemed crucial to national security and pride. -The Wall Street Journal Restoring the drama, majesty, and sheer improbability of an American triumph, this is award-winning historian Craig Nelson's definitive and thrilling story of man's

first trip to the moon. At 9:32 a.m. on July 16, 1969, the Apollo 11 rocket launched in the presence of more than a million spectators who had gathered to witness a truly historic event. Through interviews, 23,000 pages of NASA oral histories, and declassified CIA documents on the space race, *Rocket Men* presents a vivid narrative of the moon mission, taking readers on the journey to one of the last frontiers of the human imagination.

Radiophysical and Geomagnetic Effects of Rocket Burn and Launch in the Near-the-Earth Environment Leonid F. Chernogor, Nathan Blaunstein, 2016-04-19 Radiophysical and Geomagnetic Effects of Rocket Burn and Launch in the Near-the-Earth Environment describes experimental and theoretical studies on the effects of rocket burns and launchings on the near-the-Earth environment and geomagnetic fields. It's ONLY Rocket Science Lucy Rogers, 2008-03-08 Most amateur astronomers - and many of those with similar interests but who are not currently practising observers - have only a sketchy understanding of space flight. This book provides an introduction to its mechanics. The beauty of this book, written by an engineer who is also an accomplished science writer, is that it covers the subject comprehensively, and yet is almost entirely descriptive and non-mathematical. It deals with all aspects of space flight, from how to leave the Earth (including the design of the rocket, mission planning, navigation and communication), to life in space and the effects of weightlessness. The book also

includes sections describing how an amateur can track satellites and understand their orbital parameters.

Radio's Captain Midnight Stephen A. Kallis, Jr., 2004-10-05 During the horror and conflict of World War II, a fictional radio character named Captain Midnight stormed his way into the consciousness of American radio listeners. Captain Midnight (a.k.a. Charles J. Albright) was a vigorous, mature figure whom listeners could easily perceive defending their United States. The scripts, well written and expertly plotted, had a wide appeal--from excited children and their Secret Squadron Code-O-Graphs to U.S. Army Air Corps flight crews. But to fans (then and now) of the original 15-minute serial adventures, the real Captain Midnight retired when the show went to 30 minutes, replaced actor Ed Prentiss, and simplified the writing and plotting. Using facts, details and events from those original early radio scripts of Captain Midnight, the author has constructed a biography of the great wartime aviation hero, covering his origins and adventures. Concluding the work are thorough appendices that discuss Secret Squadron equipment, aircraft and rocketry; cryptology and code-cracking in the series; and Captain Midnight's portrayal in various media (books, radio, television, serials, comics and newspaper strips).
