*The Rise of EU Police Cooperation* Franca König,2022-12-30 This book provides an in-depth empirical analysis and theoretical history of the institutional development of EU police cooperation, with a focus on the creation and integration of Europol. Presenting a thoroughly comprehensive analysis, the book systematically traces integration dynamics and the evolution of EU police cooperation over a 40-year period, assessing the influence of cross-country interdependencies, politicisation and policy entrepreneurship on Member States' behaviour and institutional choice. By combining a wealth of sources including previously unpublished sources and personal insights from key decision-makers, it explores which driving factors shape processes of differentiation and integration in this sovereignty-sensitive policy domain, and how, and attempts to explain state preferences on international police cooperation in the light of major theories of European integration. The book will be of key interest to students, scholars and practitioners working in or on the fields of police cooperation, Justice and Home Affairs policy, EU governance and security studies, both at national and European level.

**To Deter and Punish** Silke Zoller,2021-07-27 In the late 1960s and early 1970s, governments in North America and Western Europe faced a new transnational threat: militants who crossed borders with impunity to commit attacks. These violent actors cooperated in hijacking planes, taking hostages, and organizing assassinations, often in the name of national liberation movements from the decolonizing world. How did this form of political violence become what we know today as "international terrorism"—lacking in legitimacy and categorized first and foremost as a crime? *To Deter and Punish* examines why and how the United States and its Western European allies came to treat nonstate "terrorists" as a key threat to their security and interests. Drawing on a multinational array of sources, Silke Zoller traces Western state officials' attempts to control the meaning of and responses to terrorism from the first Palestinian hijacking in 1968 to Ronald Reagan's militarization of counterterrorism in the early 1980s. She details how Western states sought to criminalize border-crossing nonstate violence—and thus delegitimized offenders' political aspirations. U.S. and European officials pressured states around the world to join agreements requiring them to create and enforce criminal laws against alleged individual terrorists. Zoller underscores how recently decolonized states countered that only a more equitable global system capable of addressing political grievances would end the violence. *To Deter and Punish* offers a new account of the emergence of modern counterterrorism that pinpoints its international dimensions—a story about diplomats and bureaucrats as well as national liberation militancy and the processes of decolonization.

Mutations, In Vitro and Molecular Techniques for Environmentally Sustainable Crop Improvement M.

Maluszynski,Kenneth Kasha,2013-03-09 During the last thirty years, most increases in agricultural production were achieved through high input agriculture in areas with fertile soils and sufficient water. Intensive methods of production with high levels of nitrogen fertilizer and pesticides were often accompanied by environmental degradation and in some instances by pollution of the food supply. However, rapid population growth has also led to increasing use of marginal lands, where adverse soil and climatic conditions are serious constraints to food production. These areas are even more sensitive to ecological destabilization. Environmentally sound systems of food production and land use are essential for meeting the food security needs of developing countries. To do this, greater genetic variability is needed within the best crop genotypes available for the areas in need coupled with better management practices and crop rotations. These requirements can only be realized if suitable crop varieties are bred. These should be varieties with a much shorter growing period, suitable for rotation, increased tolerance or resistance to diseases and pests as well as to drought and salinity and other adverse soil and climatic conditions.
