Bananaworld Jeffrey Bub,2016 What on earth do bananas have to do with quantum mechanics? From a modern perspective, quantum mechanics is about strangely counterintuitive correlations between separated systems, which can be exploited in feats like quantum teleportation, unbreakable cryptographic schemes, and computers with enormously enhanced computing power. Schro'dinger coined the term entanglement to describe these bizarre correlations. *Bananaworld* -- an imaginary island with entangled bananas -- brings to life the fascinating discoveries of the new field of quantum information without the mathematical machinery of quantum mechanics. The connection with quantum correlations is fully explained in sections written for the non-physicist reader with a serious interest in understanding the mysteries of the quantum world. The result is a subversive but entertaining book that is accessible and interesting to a wide range of readers, with the novel thesis that quantum mechanics is about the structure of information. What we have discovered is that the possibilities for representing, manipulating, and communicating information are very different than we thought.

Parametric Design for Landscape Architects Andrew Madl, 2021-09-05 Parametric Design for Landscape Architects provides a sequence of tutorial-based workflows for the creation and utilization of algorithmic tools calibrated toward the field of landscape architecture. Contemporary practice and projective theory in landscape architecture require the processing and design of data associated with complex systems to adequately represent composite, emergent scenarios. Aligning to both traditional and nascent processes of analysis and digital modeling, this book unpacks and decodes the characterization of algorithmic-based automation, leveraging software that is widely accessible in both academia and professional practice. Curated throughout are workflows that apply to a multiplex of computation programs that widely support the design, analysis, and production of landscapes, primarily concentrated on digital modeling tools Grasshopper and Rhinoceros. It is a much-needed, visually accessible resource to aid in more efficient understanding and creation of tools that automate and re-examine traditional calculations, analyses, drawing standards, form-finding strategies, fabrication preparations, and speculative assessments/simulation. This primer provides professionals and students with multifaceted skill-sets that, when applied in practice, expand and expedite conventional and speculative design workflows applicable to spatial design, and more specifically landscape architecture. The book includes over 200 full-colour drawings, images, and tables to illustrate and support examples throughout.

Research Methods and Statistics Ian Walker, 2017-09-16 How do you design a research project? What is the

difference in method between qualitative and quantitative research? How should psychologists go about considering the ethics of research methodology? For the 'students who ask questions', this concise text provides an informative introduction to the methods of psychological research, offering an overview of the primary stages in research. From learning how to construct the initial aims and criterion of a study to presenting the final resulting data into tables and graphs, this book aims to guide psychologists through the tools that make psychological research and the understanding of its resulting data possible. Written with enthusiasm and lucidity, Walker guides readers through the appropriate methods for undertaking research, explaining the discerning features of the core types of research, the primary measurements of statistics such as the chi-squared, t and Mann-Whitney U tests and brings an apt consideration of what makes a psychological study ethical. Whether desiring to learn about how to empirically record and measure the psychological experience of an individual or the behavioural factors of an entire population, Research Methods and Statistics is the introductory short-text for learning how to undertake successful research. This title stands as part of the Insights series edited by Nigel Holt and Rob Lewis, containing versatile, quick guides to the cornerstone theories, main topics and theoretical perspectives of their subjects and are useful for pre-undergraduate students looking to find incisive introductions to subjects that they may be considering for undergraduate study or those looking for helpful preparatory reading for undergraduate modules in the prospective subject. Also useful for undergraduate psychology-students who feel that they could benefit from some background reading in this often less-understood area of psychology.

Evaluating Sustainable Development Okechukwu Ukaga,Chris Maser,2004 This book presents the principles and the tools for participatory evaluation of sustainable development--growth that does not compromise the ability of future generations to meet their needs. It is intended for any citizen or group that may be concerned with protecting or recovering a cultural heritage, assessing the impact of a project or of plans that impact an environment or ecosystem. The authors describe participatory evaluation processes that will empower all interested stakeholders--anyone impacted by a proposed venture--to determine and control what is to be evaluated and how it is evaluated, to articulate and define their community's vision, and to ensure that development plans meet their community's needs sustainably. Acknowledging that the specific concepts, challenges, opportunities, and circumstances surrounding sustainable development differ significantly from one place or group to another, the authors provide an adaptable framework for developing an evaluation plan, as well as the tools for collecting, analyzing, interpreting and presenting data. They explain how to use and communicate findings to ensure a full and appropriate debate about the issues, and finally how to implement the evaluation plan. An important and practical book for anyone concerned with the impact of planning and development issues and who wants to ensure that all sectors of their community are given a voice in decisions that affect them.
