<u>Readings in Machine Translation</u> Sergei Nirenburg,H. L. Somers,Yorick Wilks,2003 The field of machine translation (MT) - the automation of translation between human languages - has existed for more than 50 years. MT helped to usher in the field of computational linguistics and has influenced methods and applications in knowledge representation, information theory, and mathematical statistics.

<u>Machine Translation and Translation Theory</u> Christa Hauenschild,Susanne Heizmann,2011-08-02 The series serves to propagate investigations into language usage, especially with respect to computational support. This includes all forms of text handling activity, not only interlingual translations, but also conversions carried out in response to different communicative tasks. Among the major topics are problems of text transfer and the interplay between human and machine activities.

Lost in Translation Laurence Mark Janifer,2014-06-13 In language translation, you may get a literally accurate word-for-word translation ... but miss the meaning entirely. And in space-type translation ... the effect may be the same!

Exploring Translation and Multilingual Text Production Erich Steiner,Colin Yallop,2013-02-06 The series serves to propagate investigations into language usage, especially with respect to computational support. This includes all forms of text handling activity, not only interlingual translations, but also conversions carried out in response to different communicative tasks. Among the major topics are problems of text transfer and the interplay between human

and machine activities.

Translating the Elusive Monika S. Schmid,1999-01-01 This work presents an in-depth analysis of text- and speaker-based meaning of non-canonical word order in English and ways to preserve this in English-German translation. Among the sentence structures under discussion are subject-verb inversion, Left Dislocation, Topicalization as well as wh-cleft and it -cleft sentences. Various approaches to the description and analysis of the meaning potential of these structures are presented and discussed, among them theories of grammaticalization, subjectivity, empathy and information structure. English as a rigid word order language has quite different means of creating meaning by syntactic variation than a free word order language like German. Contrastive analyses of English and German have emphasized structural differences due to the fact that English uses word order to encode the assignment of grammatical roles, while in German this is achieved mainly by morphological means. For most 'marked' constructions in English a corresponding, structure-preserving translation does not lead to an ungrammatical or unacceptable German sentence. The temptation for the translator to preserve these structures is therefore great. A case study discusses more than 200 example sentences drawn from recent works of US-American fiction and offers possible strategies for their translation.

Speech-to-Speech Translation Hiroaki Kitano,2012-12-06 Speech--to--Speech Translation: a Massively Parallel Memory-Based Approach describes one of the world's first successful speech--to--speech machine translation systems. This system accepts speaker-independent continuous speech, and produces translations as audio output. Subsequent versions of this machine translation system have been implemented on several massively parallel computers, and these

systems have attained translation performance in the milliseconds range. The success of this project triggered several massively parallel projects, as well as other massively parallel artificial intelligence projects throughout the world. Dr. Hiroaki Kitano received the distinguished `Computers and Thought Award' from the International Joint Conferences on Artificial Intelligence in 1993 for his work in this area, and that work is reported in this book.

Crossroads between Contrastive Linguistics, Translation Studies and Machine Translation Oliver Czulo,Silvia Hansen-Schirra, Contrastive Linguistics (CL), Translation Studies (TS) and Machine Translation (MT) have common grounds: They all work at the crossroad where two or more languages meet. Despite their inherent relatedness, methodological exchange between the three disciplines is rare. This special issue touches upon areas where the three fields converge. It results directly from a workshop at the 2011 German Association for Language Technology and Computational Linguistics (GSCL) conference in Hamburg where researchers from the three fields presented and discussed their interdisciplinary work. While the studies contained in this volume draw from a wide variety of objectives and methods, and various areas of overlaps between CL, TS and MT are addressed, the volume is by no means exhaustive with regard to this topic. Further cross-fertilisation is not only desirable, but almost mandatory in order to tackle future tasks and endeavours.}

Automatic Translation of Languages Aldo Ghizzetti,2014-05-16 Automatic Translation of Languages is a collection of papers that discusses the various concerns in automatic language translation systems. The text first covers algebraic linguistics and machine translation, and then proceeds to tackling the main concepts in

automatic translation of languages. Next, the selection deals with the equivalence of models of language used in the fields of mechanical translation and information retrieval. The text also discusses computational procedure in linguistic research. The next chapters detail syntax and syntactic integration. The book will be of great use to scientists and professionals who involved in the research and development of computerized language translation systems.

Machine Translation: From Research to Real Users Association for Machine Translation in the Americas Conference 2002,Association for Machine Translation in the Americas. Conference,Stephen D. Richardson,2002-09-24 This book constitutes the refereed proceedings of the 5th Conference of the Association for Machine Translation in the Americas, AMTA 2002, held in Tiburon, CA, USA, in October 2002. The 18 revised full technical papers, 3 user studies, and 9 system descriptions presented were carefully reviewed and selected for inclusion in the book. Among the issues addressed are hybrid translation environments, resource-limited MT, statistical word-level alignment, word formation rules, rule learning, web-based MT, translation divergences, example-based MT, data-driven MT, classification, contextual translation, the lexicon building process, commercial MT systems, speeck-to-speech translation, and language checking systems.

Translation Engines: Techniques for Machine Translation Arturo Trujillo,1999-10-08 Machine translation (MT) is the area of computer science and applied linguistics dealing with the translation of human languages such as English and German. MT on the Internet has become an important tool by providing fast, economical and useful translations. With globalisation and expanding trade, demand for

translation is set to grow. Translation Engines covers theoretical and practical aspects of MT, both classic and new, including: - Character sets and formatting languages - Translation memory - Linguistic and computational foundations - Basic computational linguistic techniques - Transfer and interlingua MT - Evaluation Software accompanies the text, providing readers with hands on experience of the main algorithms.

Automatic Speech Translation Akira Kurematsu,Tsuyoshi Morimoto,2023-03-31 Automatic Speech Translation introduces recent results of Japanese research and development in speech translation and speech recognition. Topics covered include: fundamental concepts of speech recognition; speech pattern representation; phoneme-based HMM phoneme recognition; continuous speech recognition; speaker adaptation; speaker-independent speech recognition; utterance analysis, utterance transfer, utterance generation; contextual processing; speech synthesis and an experimental system of speech translation. This book presents the complicated technological aspects of machine translation and speech recognition, and outlines the future directions of this rapidly developing area of technology.

Memes of Translation Andrew Chesterman,2016-02-25 This revised edition of Memes of Translation includes updates that relate the book's themes to more recent research in Translation Studies. The book contributes to the debate about whether it is worth seeking a coherent theory of translation, by proposing an approach based on norms, strategies and values, which are all seen as kinds of memes, i.e. ideas that spread. The meme metaphor allows us to see translation in the context of cultural evolution, and also highlights similarities with the philosopher Karl Popper's analysis of another kind of evolution: that of scientific knowledge. A translation is, after all, itself a theory –

a theory about the source text. And as Popper stressed, theories of all kinds are like nets we make in order to catch something of reality: never perfectly, but always in the hope of better understanding.

Machine Translation with Minimal Reliance on Parallel Resources

George Tambouratzis,Marina Vassiliou,Sokratis Sofianopoulos,2017-08-09 This book provides a unified view on a new methodology for Machine Translation (MT). This methodology extracts information from widely available resources (extensive monolingual corpora) while only assuming the existence of a very limited parallel corpus, thus having a unique starting point to Statistical Machine Translation (SMT). In this book, a detailed presentation of the methodology principles and system architecture is followed by a series of experiments, where the proposed system is compared to other MT systems using a set of established metrics including BLEU, NIST, Meteor and TER. Additionally, a free-to-use code is available, that allows the creation of new MT systems. The volume is addressed to both language professionals and researchers. Prerequisites for the readers are very limited and include a basic understanding of the machine translation as well as of the basic tools of natural language processing.

Recent Advances in Example-Based Machine Translation

M. Carl,Andy Way,2012-12-06 Recent Advances in Example-Based Machine Translation is of relevance to researchers and program developers in the field of Machine Translation and especially Example-Based Machine Translation, bilingual text processing and cross-linguistic information retrieval. It is also of interest to translation technologists and localisation professionals. Recent Advances in Example-Based Machine Translation fills a void, because it is the first book to tackle the issue of EBMT in depth. It gives a state-of-the-art

overview of EBMT techniques and provides a coherent structure in which all aspects of EBMT are embedded. Its contributions are written by long-standing researchers in the field of MT in general, and EBMT in particular. This book can be used in graduate-level courses in machine translation and statistical NLP.

Memes of Translation Andrew Chesterman,1997-06-05 Memes of Translation is a search for coherence in translation theory based on the notion of Memes: ideas that spread, develop and replicate, like genes. The author explores a wide range of ideas on translation, mapping the "meme pool" of translation theory with chapters on translation history, norms, strategies, assessment, ethics, and translator training. The aim of the book is to search for a perspective from which the immense variety of ideas about translation can be related. The unifying thread is the philosophy of Karl Popper. The book proposes the beginnings of a Popperian theory of translation, based on the fundamental concepts of norms, strategies, and values. A key idea is that a translation itself is a theory or hypothesis concerning the source text. This hypothesis is then subjected to testing, refinement, and perhaps even rejection, just like any other hypothesis.

The Strange Loops of Translation Douglas Robinson,2021-12-16 One of the most exciting theories to emerge from cognitive science research over the past few decades has been Douglas Hofstadter's notion of "strange loops," from Gödel, Escher, Bach (1979). Hofstadter is also an active literary translator who has written about translation, perhaps most notably in his 1997 book Le Ton Beau de Marot, where he draws on his cognitive science research. And yet he has never considered the possibility that translation might itself be a strange loop. In this book Douglas Robinson puts Hofstadter's strange-loops theory into dialogue with a series of definitive theories of translation, in the

process showing just how cognitively and affectively complex an activity translation actually is.
