Good Apples Susan Futrell,2017-09 Apples are so ordinary and so ubiquitous that we often take them for granted. Yet it is surprisingly challenging to grow and sell such a common fruit. In fact, producing diverse, tasty apples for the market requires almost as much ingenuity and interdependence as building and maintaining a vibrant democracy. Understanding the geographic, ecological, and economic forces shaping the choices of apple growers, apple pickers, and apple buyers illuminates what’s at stake in the way we organize our food system. Good Apples is for anyone who wants to go beyond the kitchen and backyard into the orchards, packing sheds, and cold storage rooms; into the laboratories and experiment stations; and into the warehouses, stockrooms, and marketing meetings, to better understand how we as citizens and eaters can sustain the farms that provide food for our communities. Susan Futrell has spent years working in sustainable food distribution, including more than a decade with apple growers. She shows us why sustaining family orchards, like family farms, may be essential to the soul of our nation.

*A Bibliography of Apple Marketing Research, 1945-1960* Alfred Joseph Burns,1961 References in this listing are generally limited to those reporting results of research about marketing fresh apples. Reports by U.S. Department of Agriculture and State agricultural experiment station workers comprise most of the listing. However, reports of some private research groups are also presented. Periodical literature and some foreign publications giving research results are also included.

**Apple Marketing** Alfred Joseph Burns,2018-10-06 Excerpt from Apple Marketing: A Review of Economic Research, 1945-1960 Demand and supply analysis involves examination of past market experience to measure the effects of important factors which influence the price of a commodity and the amount produced and sold. In so far as these factors can be identified and their effects measured, and if market conditions do not differ Widely from the past, results from such studies can be used in predicting what might be expected under current or probable future market conditions. Demand and supply studies seek answers to a variety of questions, such as what is the price likely to be for a cr0p of a certain Size; what part of the apple cr0p Will be sold for the several processed uses and what part for fresh consumption; what is the relationship among prices of apples for these different uses; what is the expected price variation Within a season? This last type of information would be helpful to growers in deciding when to sell apples. Results from research studies made in recent years indicate that a number of factors affect prices and utilization of apples. Among these are the Size of the apple crop, the volume of competing fruits available, and consumer income after taxes (disposable income). These factors affect price and utilization of apples in different ways. For instance, when the apple cr0pis heavy, prices tend to fall in order to move the larger crop, as long as other factors do not change. Prices tend to be higher whencr0ps are small. Changes in supplies of competing fruits have a similar effect-the price tending to be lower when large quantities of such fruits are available than when small quantities are on the market. Usually prices are less affected by the availability of substitutes than by the supply of the commodity itself, but this has not always been true for apples.
